UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, DC 20549

FORM 6-K

REPORT OF FOREIGN PRIVATE ISSUER PURSUANT TO RULE 13a-16 OR 15d-16 UNDER
THE SECURITIES EXCHANGE ACT OF 1934

For the month of MARCH, 2005.

Commission File Number: 0-30464

IMA EXPLORATION INC.

(Translation of registrant's name into English)

#709 - 837 West Hastings Street, Vancouver, British Columbia, V6C 3N6, Canada

(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports
under cover of Form 20-F or Form 40-F: FORM 20-F FORM 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as
permitted by Regulation S-T Rule 101(b)(1): _____

Indicate by check mark if the registrant is submitting the Form 6-K in paper as
permitted by Regulation S-T Rule 101(b)(7): _____

Indicate by check mark whether the registrant by furnishing the information
contained in this Form, is also thereby furnishing the information to the
Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.
YES NO

If "Yes" is marked, indicate below the file number assigned to the registrant in
connection with Rule 12g3-2(b): 82-_____

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the
registrant has duly caused this report to be signed on its behalf of the
undersigned, thereunto duly authorized.

NEWS RELEASE

MARCH 04, 2005

PHASE III DRILLING CONTINUES TO EXPAND SILVER MINERALIZATION AT CALCITE HILL AND CONFIRMS HIGH GRADE RESOURCE AT NAVIDAD HILL

IMA EXPLORATION INC. is pleased to announce results from diamond drill holes 134 to 145 of the Phase III drill program at it's 100% owned Navidad Project in Patagonia, Argentina. Highlights from Calcite Hill drilling include hole 138 which intersected 123.6M OF 139 G/T SILVER and hole 143 which intersected 46.6M OF 300 G/T SILVER including 10.3M OF 1,257 G/T SILVER. At Navidad Hill, infill drill holes 139 and 142 have intersected significantly higher grades than predicted by the resource block model, including 17.8M OF 1,037 G/T SILVER in hole 139 and 34.5M OF 1,220 G/T SILVER INCLUDING 20.2M OF 1,979 G/T SILVER in hole 142.

To date, over 32 diamond drill holes have been completed at Calcite Hill where continued Phase III drilling is currently focused. Results are currently pending for 17 of these as drilling has proceeded very rapidly of late. Drill holes have been collared over an area of approximately 500m long by 100 to 300m wide. Significant results to date include:

Calcite Hill Hole	Core Length metres	Silver Grade grams/tonne
NV04-88*	72.3	202
NV04-122*	20.2	102
NV04-124*	122.6	195
NV04-126*	100.3	156
NV05-138	123.7	139
NV05-143	46.6	300
including	10.3	1,257

* = previously released

Mineralization encountered to date at Calcite Hill is zoned. In the upper part, at and near the contact of the host trachyandesite volcanic rock, the mineralization is galena-rich with moderate silver content. This mineralization type comprises medium-grained galena with rare pyrite and few or no other visible sulphide minerals. These occur predominantly as breccia infill and veinlets within the host volcanic rock and as matrix to overlying sedimentary rocks (such as in the upper parts of holes 88, 124 and 138). Lower down within

Edgar Filing: IMA EXPLORATION INC - Form 6-K

the volcanic host rock, veinlets and breccias have little or no galena but commonly contain visible native silver and black sulphides suspected to be argentite-acanthite (AgS) and perhaps stromeyerite (AgCuS) within a gangue of calcite, barite and lesser silica (lower portions of holes 88, 124, 138 and 143). The Calcite Hill mineralization is entirely sulphide in nature with no significant quantities of metal oxides. Both styles occur over significant vertical thicknesses and mineralization is spatially associated with and hosted by the same latite volcanic host rock which hosts the mineralization at Galena Hill and Navidad Hill. No resource estimate has yet been made of the Calcite Hill mineralization to date.

Page 2

At Navidad Hill, holes 139 to 142 were completed surrounding hole 90 on the southwest flank of Navidad Hill to provide more detailed information on this zone of very high-grade silver mineralization. Of these, holes 139 (17.8m of 1,037 g/t Ag) and 142 (34.5m of 1,220 g/t Ag) intersected significantly higher grade than that predicted by the Snowden resource block model. This new drill data will help to define the high-grade material in future block model resource estimates. Mineralization in this area consists of mixed sulphides and oxides along the sedimentary-volcanic contact including argentite-acanthite, stromeyerite, galena, and copper-silver oxides.

Dr. Paul Lhotka is IMA's Qualified Person for the Navidad project under National Instrument 43-101 regulations and has overseen all aspects of the current exploration program. IMA has implemented a rigorous program of quality assurance and quality control at the Navidad project, for complete details of this and for more maps depicting the work described herein please visit IMA's web site at <http://www.imaexploration.com/>.

IMA is well financed with over \$9 million in its treasury to continue to test the numerous exploration targets at Navidad with significant drill programs. The Company has over 10 years experience in Argentina and is focused on the exploration and development of its' 100% owned Navidad silver discovery.

Additionally, IMA will be exhibiting at Booth #2422 at the 2005 Prospectors and Developers Association of Canada Conference in Toronto from March 6-9, 2005. Shareholders and investors are invited to attend to meet with management and hear about our recent developments.

ON BEHALF OF THE BOARD

/s/ Joseph Grosso

Mr. Joseph Grosso, President & CEO
