CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

Certain of the statements made and information contained in this Annual Report on Form 40-F of New Gold Inc. (the Company) may contain forward-looking statements within the meaning of Section 21E of the U.S. Securities Exchange Act of 1934, including statements concerning the Company's plans at its Afton Project and other mineral properties, which involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company, or industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Forward-looking statements are subject to a variety of risks and uncertainties which could cause actual events or results to differ from those reflected in the forward-looking statements, including, without limitation, risks and uncertainties relating to the interpretation of drill results and the estimation of mineral resources and reserves, the geology, grade and continuity of mineral deposits, the possibility that future exploration, development or mining results will not be consistent with the Company's expectations, metal recoveries, accidents, equipment breakdowns, title matters, labor disputes or other unanticipated difficulties with or interruptions in production, the potential for delays in exploration or development activities or the completion of feasibility studies, the inherent uncertainty of production and cost estimates and the potential for unexpected costs and expenses, commodity price fluctuations, currency fluctuations, failure to obtain adequate financing on a timely basis and other risks and uncertainties, including those described under Item 4. Narrative Description of the Company's Business Risk Factors in the Annual Information Form and in the Management's Discussion and Analysis, included herewith as Exhibits 1 and 3, respectively. Should one or more of these risks and uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described in forward-looking statements. Accordingly, readers are advised not to place undue reliance on forward-looking statements. Forward-looking statements include statements regarding the expectations and beliefs of management, the assumed long-term price of gold and exchange rates, the estimation of mineral reserves and resources, the realization of mineral reserve estimates in future expected production, anticipated future capital and operating costs, and the potential of the Company's properties and expectations of growth. Except as required under applicable securities legislation, the Company undertakes no obligation to publicly update or revise forward-looking statements, whether as a result of new information, future events or otherwise.

RESERVE AND RESOURCE ESTIMATES

All estimates of mineral reserves and resources incorporated by reference in this Annual Report have been prepared in accordance with Canadian National Instrument 43-101 (NI 43-101) and the Canadian Institute of Mining and Metallurgy Classification System. These standards differ significantly from the requirements of the United States Securities and Exchange Commission (SEC). Accordingly, information concerning descriptions of mineralization, reserves and resources contained in this Annual Report may not be comparable to information from U.S. companies subject to the SEC's reporting and disclosure requirements. In particular,

the term resource does not equate to the term reserves. The definitions of proven and probable reserves used in NI 43-101 differ from the definitions in SEC Industry Guide 7. Under U.S. standards, mineralization may not be classified as a reserve unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made. The SEC's disclosure standards normally do not permit the inclusion of information concerning measured, indicated, or inferred mineral resources in documents filed with the SEC, unless such information is required to be disclosed by the laws of the Company's principal jurisdiction or of a jurisdiction in which its securities are traded. U.S. investors should also understand that inferred mineral resources have a great amount of uncertainty as to their existence and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimated inferred mineral resources may not form the basis of feasibility or pre-feasibility studies except in rare cases. Readers are cautioned not to assume that all or any part of an inferred mineral resource exists or is economically or legally mineable. Disclosure of contained ounces is permitted disclosure under Canadian regulations; however, the SEC normally only permits issuers to report resources as in-place tonnage and grade.
