Commission file number 001-32328

MECHEL OAO

(Exact name of Registrant as specified in its charter)

RUSSIAN FEDERATION

(Jurisdiction of incorporation or organization)

Krasnoarmeyskaya Street 1, Moscow 125993, Russian Federation

(Address of principal executive offices)

Vladislav Zlenko, tel.: +7-495-221-8888, e-mail: vladislav.zlenko@mechel.com

(Name, Telephone, E-mail and/or Facsimile number and Address of Company Contact Person)

Securities registered or to be registered pursuant to Section 12(b) of the Act:

Title of Each Class	Name of Each Exchange on Which Registered
COMMON AMERICAN DEPOSITARY SHARES, EACH COMMON ADS REPRESENTING ONE COMMON SHARE	NEW YORK STOCK EXCHANGE
COMMON SHARES, PAR VALUE 10 RUSSIAN RUBLES PER SHARE	NEW YORK STOCK EXCHANGE ⁽¹⁾
PREFERRED AMERICAN DEPOSITARY SHARES, EACH PREFERRED ADS REPRESENTING ONE-HALF OF A PREFERRED SHARE	NEW YORK STOCK EXCHANGE
PREFERRED SHARES, PAR VALUE 10 RUSSIAN RUBLES PER SHARE	NEW YORK STOCK EXCHANGE ⁽²⁾

Securities registered or to be registered pursuant to Section 12(g) of the Act:

None

(Title of Class)

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act:

None

(Title of Class)

Edgar Filing: Mechel OAO - Form 20-F

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report.

416,270,745 common shares, of which 115,425,447 shares are in the form of common ADSs as of March 31, 2011
138,756,915 preferred shares (including 55,502,766 shares held by Skyblock Limited, a wholly-owned subsidiary of Mechel), of which 25,209,577 shares are in the form of preferred ADSs as of March 31, 2011

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934. Yes No

Note: Checking the box above will not relieve any registrant required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 from their obligations under those Sections.

Indicate by check mark whether the Registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check One):
Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP

International Financial Reporting
Standards as issued
by the International Accounting
Standards Board

Other

If "Other" has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow:

Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

(1) Listed, not for trading or quotation purposes, but only in connection with the registration of common ADSs pursuant to the requirements of the Securities and Exchange Commission.

(2) Listed, not for trading or quotation purposes, but only in connection with the registration of preferred ADSs pursuant to the requirements of the Securities and Exchange Commission.

Unless the context otherwise requires, references to Mechel refer to Mechel OAO, and references to our group, we, or our refer to Mechel OAO together with its subsidiaries.

Edgar Filing: Mechel OAO - Form 20-F

Our business consists of four segments: mining, steel, ferroalloys and power. References in this document to segment revenues are to revenues of the segment excluding intersegment sales, unless otherwise noted.

For the purposes of calculating certain market share data, we have included businesses that are currently part of our group that may not have been part of our group during the period for which such market share data is presented.

References to U.S. dollars, \$ or cents are to the currency of the United States, references to rubles or RUR are to the currency of the Russian Federation and references to euro or are to the currency of the member states of the European Union (the E.U.) that participate in the European Monetary Union.

The term tonne as used herein means a metric tonne. A metric tonne is equal to 1,000 kilograms or 2,204.62 pounds.

Certain amounts that appear in this document have been subject to rounding adjustments; accordingly, figures shown as totals in certain tables or in the text may not be an arithmetic aggregation of the figures that precede them.

Table of Contents

CIS means the Commonwealth of Independent States, its member states being Armenia, Azerbaijan, Belarus, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine and Uzbekistan.

The following table sets forth by segment the official names and location of some of our subsidiaries and their names as used in this document:

Name as Used in This Document	Official Name	Location
<i>Mining Segment</i>		
Southern Kuzbass Coal Company	Southern Kuzbass Coal Company OAO	Russia, Kemerovo region
Tomusinsk Open Pit Mine	Tomusinsk Open Pit Mine OAO	Russia, Kemerovo region
Korshunov Mining Plant	Korshunov Mining Plant OAO	Russia, Irkutsk region
Port Posiet	Port Posiet OAO	Russia, Primorsk territory
Yakutugol	Yakutugol Holding Company OAO	Russia, Sakha Republic
Port Temryuk	Port Mechel Temryuk OOO	Russia, Krasnodar territory
Port Vanino	Port Mechel Vanino OOO	Russia, Khabarovsk territory
Bluestone or Bluestone companies	Bluestone Industries, Inc., Dynamic Energy, Inc., JCJ Coal Group, LLC, and other subsidiaries carrying out the Bluestone business	United States, West Virginia
Mechel Mining	Mechel Mining OAO	Russia, Novosibirsk region
Mechel Mining Management	Mechel Mining Management Company OOO	Russia, Kemerovo region
Mechel Engineering	Mechel Engineering OOO	Russia, Moscow
Moscow Coke and Gas Plant ⁽¹⁾	Moscow Coke and Gas Plant OAO	Russia, Moscow region
Mechel-Coke ⁽¹⁾	Mechel-Coke OOO	Russia, Chelyabinsk region

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

Matters discussed in this document may constitute forward-looking statements, as defined in the safe harbor provisions of the U.S. Private Securities Litigation Reform Act of 1995. We wish to caution you that these statements are only predictions and that actual events or results may differ materially. Forward-looking statements include statements concerning plans, objectives, goals, strategies, future events or performance, and underlying assumptions and other statements, which are other than statements of historical facts. The words believe, expect, anticipate, intend, estimate, forecast, project, will, may, should and similar expressions identify forward-looking statements. Forward-looking statements appear in a number of places including, without limitation, Item 3. Key Information Risk Factors, Item 4. Information on the Company and Item 5. Operating and Financial Review and Prospects, and include statements regarding:

strategies, outlook and growth prospects;

future plans and potential for future growth;

liquidity, capital resources and capital expenditures;

growth in demand for our products;

economic outlook and industry trends;

developments in our markets;

the impact of regulatory initiatives; and

the strength of our competitors.

The forward-looking statements in this document are based upon various assumptions, many of which are based, in turn, upon further assumptions, including without limitation, management's examination of historical operating trends, data contained in our records and other data available from third parties. Although we believe that these assumptions were reasonable when made, these assumptions are inherently subject to significant uncertainties and contingencies which are difficult or impossible to predict and are beyond our control and we may not achieve or accomplish these expectations, beliefs or projections. See Item 3. Key Information Risk Factors for a discussion of important factors that, in our view, could cause actual results to differ materially from those discussed in the forward-looking statements.

Except to the extent required by law, neither we, nor any of our agents, employees or advisers intend or have any duty or obligation to supplement, amend, update or revise any of the forward-looking statements contained or incorporated by reference in this document.

Table of Contents**PART I****Item 1. Identity of Directors, Senior Management and Advisers**

Not applicable.

Item 2. Offer Statistics and Expected Timetable

Not applicable.

Item 3. Key Information**Selected Financial Data**

The financial data set forth below as of December 31, 2010, 2009, 2008, 2007 and 2006, and for the years then ended, have been derived from our consolidated financial statements. Our reporting currency is the U.S. dollar and we prepare our consolidated financial statements in accordance with accounting principles generally accepted in the United States (**U.S. GAAP**⁽¹⁾).

Our results of operations for the periods presented are significantly affected by acquisitions. Results of operations of these acquired businesses are included in our consolidated financial statements for the periods after their respective dates of acquisition. See note 1(a) to our consolidated financial statements. The financial data below should be read in conjunction with, and is qualified in its entirety by reference to, our consolidated financial statements and Item 5. Operating and Financial Review and Prospects.

Ferroalloys Segment Adjusted EBITDA	94,431	34,940	(33,287)	365,008	160,242
Power Segment Adjusted EBITDA	60,426	53,721	55,854	28,709	10,299

(1) The value of property, plant and equipment pertaining to noncontrolling shareholders in the accounting for non-controlling interests resulting from acquisitions of various subsidiaries before January 1, 2009 was recorded at appraised values rather than at historical cost as required by the then effective U.S. GAAP.

(2) Segment revenues and cost of goods sold include intersegment sales.

(3) Adjusted EBITDA represents net income before depreciation, depletion and amortization, foreign exchange gain/(loss), gain/(loss) from remeasurement of contingent liabilities at fair value, interest expense, interest income, net result on the disposal of non-current assets, amount attributable to non-controlling interests and income taxes.

Reconciliation of Adjusted EBITDA to net income is as follows for the periods indicated:

	Year Ended December 31,

Adjusted EBITDA is a measure of our operating performance that is not required by, or presented in accordance with, U.S. GAAP. Adjusted EBITDA is not a measure of our operating performance under U.S. GAAP and should not be considered as an alternative to net income, operating income or any other performance measures derived in accordance with U.S. GAAP or as an alternative to cash flow from operating activities or as a measure of our liquidity. In particular, Adjusted EBITDA should not be considered as a measure of discretionary cash available to us to invest in the growth of our business.

Adjusted EBITDA has limitations as an analytical tool, and should not be considered in isolation or as a substitute for analysis of our operating results as reported under U.S. GAAP. Some of these limitations are as follows:

Adjusted EBITDA does not reflect the impact of financing income and costs, which are significant and could further increase if we incur more debt, on our operating performance.

Adjusted EBITDA does not reflect the impact of income taxes on our operating performance.

Table of Contents

Adjusted EBITDA does not reflect the impact of depreciation, depletion and amortization on our operating performance. The assets of our businesses which are being depreciated, depleted and/or amortized (including, for example, our mineral reserves) will have to be replaced in the future and such depreciation, depletion and amortization expense may approximate the cost to replace these assets in the future. By excluding such expense from Adjusted EBITDA, Adjusted EBITDA does not reflect our future cash requirements for such replacements.

Adjusted EBITDA does not reflect the impact of foreign exchange gains and losses and gains and losses from remeasurement of contingent liabilities at fair value, which may recur.

Adjusted EBITDA does not reflect the impact of gain / (loss) from remeasurement of contingent liabilities at fair value on our operating performance.

Adjusted EBITDA does not reflect the impact of net result on the disposal of non-current assets on our operating performance.

Adjusted EBITDA does not reflect the impact of amounts attributable to non-controlling interests on our operating performance.

Other companies in our industry may calculate Adjusted EBITDA differently or may use it for different purposes than we do, limiting its usefulness as a comparative measure.

We compensate for these limitations by relying primarily on our U.S. GAAP operating results and using Adjusted EBITDA only supplementally. See our consolidated statements of income and comprehensive income and consolidated statements of cash flows included elsewhere in this document.

Exchange Rates

The following tables show, for the periods indicated, certain information regarding the official exchange rate between the ruble and the U.S. dollar, based on data published by the Central Bank of the Russian Federation (the **CBR**).

These rates may differ from the actual rates used in preparation of our financial statements and other financial information provided herein.

Year Ended December 31,	High	Rubles per U.S. Dollar		Period End
		Low	Average ⁽¹⁾	
2010	31.78	28.93	30.38	30.48
2009	36.43	28.67	31.72	30.24
2008	29.38	23.13	24.86	29.38
2007	26.58	24.26	25.58	24.55
2006	28.78	26.18	27.19	26.33

(1) The average of the exchange rates on the last business day of each full month during the relevant period.

January 2011	30.63	29.67
December 2010	31.46	30.27
November 2010	31.35	30.51
October 2010	30.80	29.63

Table of Contents

The exchange rate between the ruble and the U.S. dollar on April 12, 2011 was 27.98 rubles per one U.S. dollar.

No representation is made that the ruble or U.S. dollar amounts in this document could have been or can be converted into U.S. dollars or rubles, as the case may be, at any particular rate or at all.

Recent Developments

On December 26, 2010 three out of thirty thickeners at the coking coal washing shop of Nerungrinsk Washing Plant, a branch of Yakutugol, collapsed. There were no injuries but the collapse led to suspension of works at the washing shop. Yakutugol took measures to clean up and restore the thickeners. Thickeners are used to clean and recycle the water in the coal washing process. Yakutugol also revised the overburden and extraction plans at the Nerungrinsk open pit to align production with the reduced capacity of the washing plant. Extraction, processing and shipment of steam coal were done in accordance with the existing contracts obligations. On February 10, 2011, coking coal concentrate production in the second and third sections of the washing plant was re-launched. Reconstruction works in the first section are still in progress.

Risk Factors

An investment in our shares and ADSs involves a high degree of risk. You should carefully consider the following information about these risks, together with the information contained in this document, before you decide to buy our shares or ADSs. If any of the following risks actually occurs, our business, financial condition, results of operations or prospects could be materially adversely affected. In that case, the value of our shares or ADSs could also decline and you could lose all or part of your investment.

Risks Relating to Our Financial Condition and Financial Reporting

We have a substantial amount of outstanding indebtedness.

We have a substantial amount of outstanding indebtedness, primarily consisting of debt we incurred in connection with the financing of our acquisitions of Yakutugol and Oriel Resources in 2007 and 2008, as well as debt we incurred to finance our working capital needs and investment program in recent years. A substantial portion of our bank loans are from Russian banks, including state-controlled banks such as Gazprombank, Sberbank and VTB Bank. As of December 31, 2010, our consolidated total debt, including capital lease obligations, was \$7,498.5 million, with a short-term portion of \$2,127.5 million. Our interest expense for the year ended December 31, 2010 was \$558.4 million, net of the amount capitalized.

In order to secure bank financings, we have pledged shares in certain key subsidiaries, including 55% of Yakutugol, 55% of Southern Kuzbass Coal Company, 35% of Chelyabinsk Metallurgical Plant, 25% of Southern Urals Nickel Plant and 25%+1 share of Beloretsk Metallurgical Plant. Also, property, plant and equipment and certain other assets of our subsidiaries are pledged to lenders.

Our ability to make payments on our indebtedness depends upon our ability to maintain our operating performance at a certain level, which is subject to general economic and market conditions and to financial, business and other factors, many of which we cannot control. If we do not generate sufficient cash flow from operations in order to meet our debt service obligations, we may have to undertake alternative financing plans to alleviate liquidity constraints, such as refinancing or restructuring our debt, reducing or delaying our capital expenditures or seeking additional capital. We cannot provide any assurance that any refinancing or additional financing would be available on acceptable terms. Our inability to generate sufficient cash flow to satisfy our debt service obligations or to refinance debt on commercially reasonable terms could materially adversely affect our business, financial condition, results of

operations and prospects.

We will require a significant amount of cash to fund our capital investment program.

Our capital investment program is an important part of our business strategy. Our business requires maintenance capital expenditures in order to maintain existing production levels. We spent \$1.0 billion during 2010

Table of Contents

(including \$227.5 million in maintenance capital expenditures) and our capital investment program includes capital spending of up to \$2.4 billion in 2011 (including up to \$244.5 million in maintenance capital expenditures). These planned capital expenditures include investments in Yakutugol, including those required to be made pursuant to the terms of the subsoil license for the undeveloped Elga coal deposit. Our capital investment program includes capital spending of up to \$4.7 billion for the three-year period of 2011-2013 (including up to \$695 million in maintenance capital expenditures). See Item 4. Information on the Company Capital Investment Program. Our ability to undertake and fund planned capital expenditures will depend on our ability to generate cash in the future and access debt and equity financing. This, to a certain extent, is subject to general economic, financial, competitive, legislative, regulatory and other factors that are beyond our control. Attracting debt financing for our capital expenditures on commercially reasonable terms may be particularly challenging given our current high levels of indebtedness relative to our free cash flows and pledges of shares and assets of our subsidiaries to our current lenders.

Most of our existing borrowings are from Russian and international banks and financial institutions, as well as through Russian ruble bonds. In the future we may also seek to access international capital markets. It is possible that these sources of financing may not be available in the future in the amounts we require or may be expensive. International credit markets have experienced, and may continue to experience, high volatility and severe liquidity disruptions stemming from the effects of the international financial and economic crisis starting in 2008 and the related global economic slowdown. These and other related events have had a significant impact on the global capital markets, and the reduced liquidity in the global capital markets could limit our ability to diversify our funding sources. Increased funding costs or greater difficulty in diversifying our funding sources might have a material adverse effect on our business, financial condition, results of operations and prospects. See Risks Relating to the Russian Federation Emerging markets such as Russia are subject to greater risks than more developed markets, and financial turmoil in developed or other emerging markets could cause the value of our shares and ADSs to fluctuate widely and Risks Relating to the Russian Federation Economic risks The Russian banking system is still developing, and another banking crisis could place severe liquidity constraints on our business.

We faced a liquidity shortage during the global financial crisis and the resulting global economic slowdown.

As a result of the economic downturn and a sharp decline in demand and prices for our products starting from August 2008 and continuing into the first half of 2009, as well as due to a substantial increase in our total indebtedness in 2007 and early 2008 which was incurred mostly for the acquisition of Yakutugol in 2007 and Oriel Resources in 2008, we experienced a liquidity shortage in late 2008 and early 2009. We also breached various financial and non-financial covenants in our loan agreements at that time. As of 31 December 2008, our total indebtedness was \$5,369.2 million, with a short-term portion of \$5,149.4 million, which included \$4,233.8 million in loans with covenant violations out of which \$1,563.6 million was long-term debt which was reclassified as short-term debt due to loan covenant violations. We had a working capital deficit of \$3,596.3 million. Since we had significant debt that we did not have the ability to repay without refinancing or restructuring, and our ability to do so was dependent upon continued negotiations with our banks, there was substantial doubt about our ability to continue as a going concern as of June 1, 2009, the date of the issuance of our consolidated financial statements for the year ended December 31, 2008.

In late 2008 and early 2009, to address our liquidity shortage we obtained major loans from Russian state-owned banks. In July 2009, we completed the restructuring and refinancing of our Oriel Resources and Yakutugol facilities with a syndicate of 27 international and Russian banks. We were able to prolong scheduled loan repayments and reset the covenants in order to give us more time and flexibility to meet our debt obligations. Through the course of 2009, we also placed three series of ruble bonds in the total principal amount of 15.0 billion rubles (\$503.9 million).

The weakness in the demand and prices for our products through the first half of 2009, however, continued to negatively impact all our segments. As of December 31, 2009, our total indebtedness was \$5,997.5 million, an increase of \$628.3 million from December 31, 2008. Short-term portion of our total indebtedness was

\$1,923.0 million as of December 31, 2009, as compared to \$5,149.4 million as of December 31, 2008. Working capital deficit improved to \$537.1 million as of December 31, 2009, as compared to \$3,596.3 million as of December 31, 2008. As of December 31, 2009, we had breached a number

Table of Contents

of financial and non-financial covenants in various loan agreements but we received appropriate consents and covenant amendments from the banks and as of the date of the issuance of the consolidated financial statements for the year ended December 31, 2009.

During the second half of 2009 and 2010 with a market recovery we have improved our liquidity position and working capital sufficiency as well as remedied our covenants breach. During 2010 and 2011, we further restructured and refinanced our Oriol and Yakutugol acquisition facilities and obtained loans from Russian state-controlled banks and issued Russian bonds. As of December 31, 2010, our total indebtedness was \$7,318.4 million, an increase of \$1,320.9 million from December 31, 2009. Short-term portion of our total indebtedness was \$2,077.8 million as of December 31, 2010 as compared to \$1,923.0 as of December 31, 2009. Working capital improved to \$491.4 million as of December 31, 2010 as compared to \$537.1 million deficit as of December 31, 2009. We expect operating cash flows to provide an increased source of funds in 2011 to be available for capital expenditures and debt servicing. We believe that cash generated from operations, current cash and short-term investments on hand, and borrowings under our credit facilities will be sufficient to meet our working capital requirements, anticipated capital expenditures and scheduled debt payments in 2011. Our ability to incur additional debt, however, is limited by our restrictive covenants. See Item 5. Operating and Financial Review and Prospectus Restrictive Covenants. Any deterioration in our operating performance, including due to any worsening of prevailing economic conditions, fall in commodities and steel prices (whether due to the cyclical nature of the industry or otherwise) and/or financial, business or other factors, many of which are beyond our control, may adversely and materially affect our cash flow, liquidity and working capital position and may result in an increase in our working capital deficit and in us being unable to meet our obligations as they fall due. If such a situation were to occur, we may be required to further restructure our existing debt and/or to seek additional capital. There is no guarantee that we would be successful in restructuring our debt or in raising additional capital, or that we would be able to do so on a timely basis or on terms which are acceptable to us. Even if we were successful, the terms of such restructuring or new capital may be detrimental to holders of ADSs and shares. Any such deterioration, affect or failure could have a material adverse effect on our business, results of operations and financial condition and the trading price of the ADSs and shares.

Inflation could increase our costs and decrease operating margins.

In 2010, the inflation rate in Russia was 8.8% and averaged 10.7% over the 2006-2010 period, according to the Russian Federal State Statistics Service (**Rosstat**). As we tend to experience inflation-driven increases in certain of our ruble-denominated costs, including salaries, rents and fuel and energy costs, which are sensitive to rises in the general price level in Russia, our costs in U.S. dollar terms will rise, assuming the ruble-to-dollar exchange rate remains constant. See Changes in the exchange rate of the ruble against the U.S. dollar may materially adversely affect our results of operations. In this situation, due to competitive pressures, we may not be able to raise the prices we charge for our products sufficiently to preserve operating margins. Accordingly, inflation in Russia could increase our costs and have the effect of decreasing operating margins.

Any material change in our commercial dealings with or loss of accounts receivable from or prepayments to certain related parties could have a material adverse effect on our business, results of operations and financial condition.

From late 2009 to present, we have been working closely with a number of Russian and foreign metallurgical plants and trading companies, which are considered related parties under our U.S. GAAP financial statements. See Item 7. Major Shareholders and Related Party Transaction Related Party Transactions Transactions with related metallurgical plants and Transactions with Metallurg-Trust . We work on a commercial basis with these companies, supplying raw materials to them and purchasing their products pursuant to short-term supply and purchase contracts. Revenues from sales to these companies amounted to \$640.0 million and \$57.2 million in the years ended December 31, 2010 and 2009, respectively. Purchases from these companies amounted to \$1,228.5 million and \$117.8 million in the years ended December 31, 2010 and 2009, respectively. Revenues from re-sales of products

purchased from these companies to third parties amounted to \$1,051.1 million and \$123.7 million in the years ended December 31, 2010 and 2009, respectively. Substantially all of the revenues from sales to and revenues from re-sales of

Table of Contents

products purchased from these companies were in the steel segment. In the years ended December 31, 2010 and 2009, these revenues represented 30.3% and 5.8%, respectively, of the group's total steel segment revenues. As of December 31, 2010, accounts receivable from these companies totalled \$310.9 million, with credit terms varying from 30 to 180 days. In addition, as of December 31, 2010, prepayments to these companies totalled \$328.9 million.

As we have a large exposure to these related parties, amounting to \$639.8 million as of December 31, 2010, we closely monitor our balances with these companies, including our trade accounts payable to them. No allowance for doubtful accounts has been credited against the accounts receivable from these companies because the group considers the full amount of accounts receivable to be collectible. Nevertheless, given the recent past liquidity issues faced by these companies and the dependency of their businesses on the general condition of the steel sector, we are exposed to the risk of uncollectibility of accounts receivable from and loss of prepayments to these companies, and any material change in our commercial dealings with or loss of accounts receivable from or prepayments to these companies could have a material adverse effect on our business, results of operations and financial condition.

Increased levels of indebtedness and restrictions on equity financings may limit our access to capital, which could have a material adverse effect on our business, financial condition, results of operations and prospects.

Among other things, increased levels of indebtedness, and particularly increases in the level of secured indebtedness, could potentially: (1) limit our ability to obtain additional financing; (2) limit our flexibility in planning for, or reacting to, changes in the markets in which we compete; (3) disadvantage our group relative to our competitors with superior financial resources; (4) lead to a loss of collateral pledged as security; (5) render us more vulnerable to general adverse economic and industry conditions; (6) require us to dedicate all or a substantial part of our cash flow to service our debt; and (7) limit or eliminate our ability to pay dividends.

In addition, Russian companies are limited in their ability to place shares in circulation outside of Russia, including in the form of depositary receipts such as our common American Depositary Shares (**common ADSs**) and our global depositary shares representing our common shares (**GDSs**), as well as our preferred American Depositary Shares representing our preferred shares (**preferred ADSs**), the common ADSs and the preferred ADSs together referred to as **ADSs**) due to Russian securities regulations. We have received permission from the Russian Federal Financial Markets Service (**FFMS**) for up to 40% of our common shares to be circulated abroad through depositary receipt programs, which was the maximum amount allowed at that time. Later we also received FFMS permission for a total of 41,627,074 preferred shares to be circulated through depositary receipt programs, representing 30% of the total number of issued preferred shares, which was the maximum amount allowed at that time. Over the last few years, this limit has been gradually reduced by the FFMS. Current regulations provide that no more than 25%, 15% or 5% of the total number of outstanding shares of a certain class may be placed or circulated outside the Russian Federation depending on the company's listing status on a Russian stock exchange (**A** , **B** or **V** and **I**). Our common shares have listing status **A** on RTS and MICEX. It is unclear whether the FFMS's approvals of higher amounts prior to the establishment of these lower limits will be allowed to remain in place, or whether the enacted limits will override prior FFMS permissions for higher amounts. Our common ADSs and GDSs together currently account for approximately 35% of our common shares, and accordingly we believe we cannot raise additional equity financing through placement of common shares in the form of depositary receipts. If the current limits are enforced Deutsche Bank Trust Company Americas (the **depository**) may be forced to cancel some of our common ADSs and GDSs and deliver a corresponding number of the underlying common shares to holders of common ADSs or GDSs. The Russian government or its agencies may also impose other restrictions on international financings by Russian issuers.

Any of the foregoing factors may limit our access to capital and harm our competitive position. If we cannot obtain adequate capital, we may not be able to fund our capital investment program and implement our business strategy.

Table of Contents

Changes in the exchange rate of the ruble against the U.S. dollar may materially adversely affect our results of operations.

A majority of our sales are denominated in U.S. dollars, whereas the majority of our direct costs are incurred in rubles. Depreciation in real terms of the ruble against the U.S. dollar results in a decrease in our costs relative to our revenues. Conversely, appreciation in real terms of the ruble against the U.S. dollar, which was the prevailing trend in the 2002-2007 period, may materially adversely affect our results of operations if the prices we are able to charge for our products do not increase sufficiently to compensate for the increase in real terms in our ruble-denominated expenditures. In 2010, the ruble appreciated in real terms against the U.S. dollar by 9.7% as compared with 2009, according to the Central Bank of the Russian Federation.

Limitations on the conversion of rubles into foreign currencies in Russia could cause us to default on our obligations.

Much of our indebtedness and our major capital expenditures are denominated and payable in various foreign currencies, including the U.S. dollar and euro. Russian legislation currently permits the conversion of ruble revenues into foreign currency without limitation. However, if the Russian authorities impose limitations on the convertibility of the ruble or other restrictions on operations with rubles and foreign currencies in the event of an economic crisis, there may be delays or other difficulties in converting rubles into foreign currency to make a payment or delays in or restrictions on the transfer of foreign currency. This, in turn, could limit our ability to meet our payment and debt obligations, which could result in the loss of suppliers, acceleration of debt obligations and cross-defaults and, consequently, have a material adverse effect on our business, financial condition, results of operations and prospects.

Our business could be materially adversely affected if our lenders accelerate our debt.

The terms of most of our loan agreements under which we or our subsidiaries are borrowers contain various representations, undertakings, covenants and events of default. Additionally, our loan agreements contain cross-default provisions whereby an event of default under one agreement may in and of itself result in a cross-default under other agreements. See Item 5. Operating and Financial Review and Prospects Liquidity and Capital Resources and Item 5. Operating and Financial Review and Prospects Description of Certain Indebtedness. Furthermore, according to the terms of such agreements, certain of our actions aimed at developing our business and pursuing our strategic objectives, such as acquisitions, dispositions of assets, restructuring, investments into certain of our subsidiaries and others, require prior consent from the respective lenders.

In recent years since the onset of the financial crisis we were in breach of covenants in various loan agreements, but we received appropriate consents and covenant amendments from the banks. As of December 31, 2010, and currently, we do not have any violations of any covenants under our loan agreements which could lead to a demand for accelerated repayment of principal and interest.

Our ability to continue to service, repay and refinance our indebtedness and to comply with our financial and other loan covenants will depend on our ability to generate cash in the future and attract new financing and refinance the existing indebtedness, as well as on lenders' credit decisions. This, in turn, is subject to general economic, financial, competitive, legislative and other factors that are beyond our control. We cannot assure you that any potential breach of financial and other covenants in our loan agreements, including defects in security, will not result in new and renewed demands from our lenders for acceleration of our loan repayment obligations or related litigation, including as a result of cross-defaults. If we fail to comply with our financial and other loan covenants contained in any of our loan agreements, including compliance with financial ratios or fail to obtain prior consent of lenders for certain actions, or fail to obtain extensions or waivers in respect of our breaches of our loan agreements or amend our loan agreements, such failure could be deemed by the lenders to be an event of default which could result in, among other things, acceleration of repayment of principal and interest under the relevant loan agreement and any other loan

agreement under which a default on such instrument would trigger a cross-default, reduced opportunities for future borrowing, debt service obligations in excess of our ability to pay, liability for damages or inability to further develop our business and pursue our strategic objectives, any of which could have a material adverse effect on our business, financial condition, results of operations and prospects.

Table of Contents

We have merged and intend to continue to merge certain subsidiaries for operational reasons from time to time. Under Russian law, such mergers are considered to be a reorganization and the merged subsidiaries are required to publish the information regarding this reorganization twice with a monthly interval. Russian law also provides that, for a period of 30 days after date of latest publication, the creditors of merging subsidiaries have a right to file a claim seeking acceleration of the reorganized subsidiaries' indebtedness and demand reimbursement for applicable losses, however, the court may not accept such a claim against subsidiaries existing in the form of an open joint stock company if it concludes that the creditor had adequate security. In the event that we undertake any such merger and all or part of our subsidiaries' indebtedness is accelerated, we and such subsidiaries may not have the ability to raise the funds necessary for repayment, which could have a material adverse effect on our business, financial condition, results of operations and prospects.

We had in the past and still have material weaknesses in our internal control over financial reporting, and we make no assurances that additional material weaknesses will not be identified in the future.

Management identified four material weaknesses in our internal control over financial reporting as defined in the Exchange Act Rule 12b-2 and Rule 1-02 of Regulation S-X that affected our financial statements for the year ended December 31, 2010. The material weaknesses in our internal control over financial reporting identified for the year ended December 31, 2010 are described in Item 15. Controls and Procedures. Due to the effect of these material weaknesses, our auditors have opined that we have not maintained effective internal control over financial reporting as of December 31, 2010 under Section 404 of the Sarbanes-Oxley Act of 2002. Our auditors have also opined that we did not maintain effective internal control over financial reporting as of each of December 31, 2006, 2007, 2008 and 2009, due to the effect of the material weaknesses identified as of those dates.

Notwithstanding the steps we have taken and continue to take that are designed to remedy each material weakness identified in Item 15. Controls and Procedures, we may not be successful in remedying these material weaknesses in the near or long term and we make no assurances that additional significant deficiencies or material weaknesses in our internal control over financial reporting will not be identified in the future. Our failure to implement and maintain effective internal control over financial reporting could result in errors in our financial statements that could result in a restatement of financial statements, cause us to fail to meet our reporting obligations and cause investors to lose confidence in our reported financial information, leading to a decline in the market price of our shares and ADSs.

Given the competition for qualified accounting personnel in Russia, we may be unable to retain our key accounting staff, which could disrupt our ability to timely and accurately report U.S. GAAP financial information.

Our subsidiaries maintain their books and records in local currencies and prepare accounting reports in accordance with local accounting principles and practices. In particular, each of our Russian subsidiaries maintains its books in rubles and prepares separate unconsolidated financial statements in accordance with Russian accounting standards. For every reporting period, we translate, adjust and combine these Russian statutory financial statements to prepare consolidated financial statements prepared in accordance with U.S. GAAP. This is a time-consuming task requiring us to have accounting personnel experienced in internationally accepted accounting standards. We believe there is a shortage in Russia of experienced accounting personnel with knowledge of internationally accepted accounting standards. Moreover, there is an increasing demand for such personnel as more Russian companies are beginning to prepare financial statements on the basis of internationally accepted accounting standards. Such competition makes it difficult for us to hire and retain such personnel, and our key accounting staff may leave us. Under these circumstances, we may have difficulty in remedying the material weaknesses in our internal financial controls identified by our management and in the timely and accurate reporting of our financial information in accordance with U.S. GAAP. See We had in the past and still have material weaknesses in our internal control over financial reporting, and we make no assurances that additional material weaknesses will not be identified in the future.

Table of Contents

Risks Relating to Our Business and Industry

We operate in cyclical industries, and any local or global downturn, whether or not primarily affecting the mining and/or steel industries, may have an adverse effect on our business, financial condition, results of operations and prospects.

Our mining segment sells coal (metallurgical and steam), iron ore and coke. These commodities are traded in markets throughout the world and are influenced by various factors beyond our control, such as global economic cycles and economic growth rates. Prices of these products have varied significantly in the past and could vary significantly in the future.

Our steel segment sells steel products, including semi-finished products, carbon and specialty long products, stainless flat products, wire products, forgings and stampings and others. The steel industry is highly cyclical in nature because the industries in which steel customers operate are subject to changes in general economic conditions. The demand for steel products thus generally correlates to macroeconomic fluctuations in the economies in which steel producers sell products, as well as in the global economy. The prices of steel products are influenced by many factors, including demand, worldwide production capacity, capacity-utilization rates, raw material costs, exchange rates, trade barriers and improvements in steel-making processes. Steel prices have experienced, and in the future may experience, significant fluctuations as a result of these and other factors, many of which are beyond our control.

Our ferroalloys segment sells ferronickel, ferrosilicon and ferrochrome. These ferroalloy products are primarily used in the manufacture of steel. Thus, market demand for our ferroalloy products is very closely linked with the market for steel and generally follows the cycles of the steel industry.

Our power segment generates and supplies electricity. Power demand in Russia depends on its consumption by the industrial sector. In Russia, the steel and mining industries are major consumers of power and the recent declines in production by steel and mining companies has impacted demand for power. Therefore, the market demand for the power produced by our power segment is affected by many of the same factors and cycles that affect our mining and metals businesses. Due to government price regulation and the current shortage of power generation capacity in Russia, reduced demand for power has not impacted power prices. However, as Russian regulated power prices are set in rubles, if power prices are not increased steadily they may decline on a real dollar basis when ruble devaluation and inflation are taken into account.

Prices for our products, including coal, iron ore, metals and power, as well as the prices of coal, iron ore, ferroalloys, power and natural gas and other commodities and materials we purchase from third parties for the production of our products, fluctuate substantially over relatively short periods of time and expose us to commodity price risk. We do not use options, derivatives or swaps to manage commodity price risk. We use our vertically integrated business model and intersegment sales, as well as short-term and long-term purchase and sales contracts with third-party suppliers and customers, to manage such risk. In addition, the length and pricing terms of our sales contracts on certain types of products are affected and regulated by orders issued by Russian antimonopoly authorities. In particular, pursuant to a directive issued to us by the Russian Federal Antimonopoly Service (**FAS**) in August 2008, we entered into long-term contracts for supply of certain grades of our coking coal with a formula of price calculation and with fixed volumes for the entire period of the contract. See Antimonopoly regulation could lead to sanctions with respect to the subsidiaries we have acquired or established or our prices, sales volumes or business practices. Terms of sales of other types of our products may also be affected by regulations of the authorities. We cannot assure you that our strategies and contracting practices will be successful in managing our pricing risk or that they will not result in liabilities. If our strategies to manage commodity price risk and the impact of business cycles and fluctuations in demand are not successful, it could have a material adverse impact on our business, financial condition, results of operations and prospects.

The steel, mining and ferroalloy industries are highly competitive, and we may not be able to compete successfully.

We face competition from Russian and international steel and ferroalloys manufacturers and mining companies. Recent consolidation in the steel and mining sectors globally has also led to the creation of several

Table of Contents

large producers, some of which have greater financial resources and more modern facilities than ourselves. We also face price-based competition from producers in emerging market countries, including, in particular, Ukraine and Kazakhstan. Increased competition could result in more competitive pricing and reduce our operating margins.

Our competitiveness is based in part on our operations in Russia and other former Eastern Bloc countries having a lower cost of production than competitors in higher-cost locations. We have been facing a consistent upward trend in the past several years in production costs, particularly with respect to wages and transportation. For example, our rail transportation costs increased consistently during the last three years with rail tariff increases of 21.1% in 2008, 11.0% in 2009 and 9.4% in 2010. See Recent and potential developments in the Russian rail transportation sector expose us to uncertainties regarding transportation costs of raw materials and steel products , Increasing costs of electricity, natural gas and labor could materially adversely affect our operating margins and Inflation could increase our costs and decrease operating margins. If these production costs continue to increase in the jurisdictions in which we operate, our competitive advantage will be diminished, which could have a material adverse effect on our business, financial condition, results of operations and prospects.

Terrorist attacks and threats, escalation of military activity, as well as massive cyber attacks, and government regulation in response to such attacks or acts of war may negatively affect our business, financial condition, results of operations and prospects.

Terrorist attacks and threats, escalation of military activity, as well as massive cyber attacks, and an increase in government regulation in response to such attacks or acts of war may negatively affect our business. There could be delays or losses in transportation and deliveries of our products to our customers, increased government regulation and decreased sales due to disruptions in the businesses of our customers. It is possible that any such occurrences could have a material adverse effect on our business, financial condition, results of operations and prospects.

The financial performance of our mining segment depends on the availability of an adequate supply of coal reserves that can be mined at competitive costs.

The financial performance of our mining segment depends substantially on our ability to mine coal reserves that have the geological characteristics that enable them to be mined at competitive costs and to meet the quality needed by our customers. Replacement reserves may not be available when required or, if available, may not be capable of being mined at costs comparable to those characteristic of the depleting mines. Our ability to obtain other reserves through acquisitions in the future could be limited by restrictions under our existing or future debt agreements, competition from other mining companies for attractive properties, the lack of suitable acquisition candidates or the inability to acquire mining properties on commercially reasonable terms.

Furthermore, we may not be able to mine all of our reserves as profitably as we do at our current operations due to increases in wages, power and fuel prices and other factors. Our planned development projects and acquisition activities may not result in significant additional reserves and we may not have continuing success developing new mines or expanding existing mines beyond our existing reserves. In addition, we have not yet applied for all of the permits required, or constructed the mines necessary, to use all of our U.S. reserves. We may be unable to obtain such permits. Some of these permits are becoming increasingly difficult and expensive to obtain and the authorization process continues to lengthen.

We face numerous uncertainties in estimating our economically recoverable reserves, and inaccuracies in our estimates could result in lower than expected revenues, higher than expected costs or decreased operating margins.

We base our reserve information on engineering, economic and geological data assembled and analyzed by our staff, which includes various engineers and geologists, and which is reviewed by independent mining engineers only

periodically, once in three years. The reserve estimates as to both quantity and quality are

Table of Contents

periodically updated to reflect production from the reserves and new drilling, engineering or other data received. There are numerous uncertainties inherent in estimating quantities and qualities of and costs to mine recoverable reserves, including many factors beyond our control. Estimates of economically recoverable reserves and net cash flows necessarily depend upon a number of variable factors and assumptions, such as geological and mining conditions which may not be fully identified by available exploration data or which may differ from experience in current operations, projected rates of production in the future, historical production from the area compared with production from other similar producing areas, the assumed effects of regulation and taxes by governmental agencies and assumptions concerning coal prices, operating costs, mining technology improvements, severance and excise tax, development costs and reclamation costs, all of which may vary considerably from actual results. In addition, it may take many years from the initial phase of drilling before production is possible. During that time, the economic feasibility of exploiting a discovery may change as a result of changes in the market price of the relevant commodity.

For these reasons, estimates of the economically recoverable quantities and qualities attributable to any particular group of properties, classifications of reserves based on risk of recovery and estimates of net cash flows expected from particular reserves prepared by different engineers or by the same engineers at different times may vary substantially. Actual tonnage recovered from identified reserve areas or properties and revenues and expenditures with respect to our reserves may vary materially from estimates. These estimates thus may not accurately reflect our actual reserves. Any inaccuracy in our estimates related to our reserves could result in lower than expected revenues, higher than expected costs or decreased operating margins.

In addition, the calculation of reserves of the Elga coal deposit, which we acquired in October 2007 along with our acquisition of Yakutugol, is subject to certain risks due to the license obligations and capital costs involved in developing the required infrastructure and commencing production and the nature of the undeveloped Elga coal deposit.

Successful implementation of our strategy to expand our specialty long product sales and coal sales depends on our ability to increase our export sales of these products.

While we expect continued growth of demand in the Russian market for specialty long products, our strategy to expand these sales substantially is dependent on our ability to increase our exports of these products to other countries, particularly the E.U. countries. We face a number of obstacles to this strategy, including trade barriers and sales and distribution challenges, insufficient capacity of Russian sea ports, as well as restrictions imposed by antimonopoly legislation and regulatory orders. See Item 8. Financial Information Litigation Antimonopoly.

Likewise, our strategy to increase our sales of coal, particularly high-grade coking coal, is substantially dependent on our ability to increase our exports of these products from our coal assets in the Russian Far East to other countries, particularly Japan, China, South Korea and other Pacific Rim countries. Insufficient capacity of Russian ports generally limits exports by Russian producers. Our ability to increase coking coal export volumes is also limited by requirements to first satisfy domestic Russian coal demand, pursuant to a FAS directive issued to us in August 2008. See Antimonopoly regulation could lead to sanctions with respect to the subsidiaries we have acquired or established or our prices, sales volumes and business practices. A failure to successfully manage the obstacles and tasks involved in the implementation of our export sales expansion strategy could have a material adverse effect on our business, financial condition, results of operations and prospects.

If shares of our subsidiary holding companies are listed on a stock exchange, it could entail changes in such companies' management and corporate governance that might affect our integrated business model.

While we intend to continue to operate as an integrated business, if and when a listing of shares takes place in respect of the subsidiary holding companies we are forming or intend to form to consolidate our mining, steel and ferroalloy

assets, changes to the management structure of such subsidiary holding companies and/or the assets consolidated within them may be made in preparation for such a listing. After a listing of a subsidiary holding company, the subsidiary's directors and management would operate the business of such

Table of Contents

subsidiary, in accordance with applicable law, for the benefit of all shareholders, including minority shareholders. In addition, companies listed on stock exchanges comply with certain corporate governance requirements and are encouraged to implement certain corporate governance recommendations, including the appointment of independent directors. These and other changes, if implemented in connection with the consolidation and potential listing of subsidiaries holding our mining, steel and ferroalloy assets, may result in decision-making by the directors and management of such subsidiaries, including with respect to payment of dividends, that may not be consistent with our current integrated business model. As our integrated business model is the key to our strategy, changes in decision-making by our subsidiaries' directors and management in connection with a listing may materially adversely affect our business, financial condition, results of operations and prospects.

Our business strategy envisions additional acquisitions and continued integration, and we may fail to identify suitable targets, acquire them on acceptable terms, identify all potential liabilities associated with them or successfully integrate them into our group.

Our strategy relies on our status as an integrated mining, steel, ferroalloys and power group, which allows us to benefit from economies of scale, realize synergies, better satisfy the needs of our Russian and international customers, reduce our reliance on third party brokers by distributing and selling our products directly to end users, and compete effectively against other mining, steel, ferroalloys and power producers. We also intend to enhance the profitability of our business by applying our integration strategy to a larger asset base and, towards that end, on an ongoing basis we need to identify suitable targets that would fit into our operations, acquire them on terms acceptable to us and successfully integrate them into our group. We often compete with Russian and international companies for acquisitions, including for subsoil licenses.

The acquisition and integration of new companies pose significant risks to our existing operations, including:

additional demands placed on our senior management, who are also responsible for managing our existing operations;

increased overall operating complexity of our business, requiring greater personnel and other resources; and

incurrence of debt to finance acquisitions and higher debt service costs related thereto.

In addition, new acquisitions may require significant initial cash investments for integration or upgrades. Furthermore, even if we are successful in integrating our existing and new businesses, expected synergies and cost savings may not materialize, resulting in lower than expected operating margins.

We have acquired and established businesses in countries that represent new operating environments for us and which are located at a great distance from our headquarters in Russia. These businesses conduct operations in accordance with local customs and laws. For example, through our acquisition of the Bluestone companies in May 2009, and our establishment of Mechel Bluestone Inc., a Delaware corporation that holds the Bluestone companies, we now have significant operations, assets and employees in the United States which are subject to U.S. federal and state laws and regulations.

In some instances we conduct limited due diligence investigations in connection with our acquisitions and the contractual documentation does not contain representations and warranties and indemnities to protect against unidentified liabilities and other losses. Moreover, these acquired businesses may not have financial reports prepared under internationally accepted accounting standards. Accordingly, these businesses may face risks that we have not yet identified and that are not described in this document and we may not realize the full benefit of our investment, which could have a material adverse effect on our business, financial condition, results of operations and prospects.

Table of Contents

In the event the title to any company we acquired is successfully challenged, we risk losing our ownership interest in that company or its assets.

Almost all of our Russian assets consist of privatized companies, and our business strategy will likely involve the acquisition of additional privatized companies. The Russian statute of limitations for challenging privatization transactions is three years. However, because Russian privatization legislation is vague, internally inconsistent and in conflict with other legislation, including conflicts between federal and local privatization legislation, and the statute of limitations for challenging certain actions related to privatization may be argued to begin to run only upon the discovery of a violation, many privatizations are vulnerable to challenge. In the event that any title to, or our ownership stakes in, any of the privatized companies acquired by us is subject to challenge as having been improperly privatized and we are unable to defeat this claim, we risk losing our ownership interest in the company or its assets, which could materially adversely affect our business, financial condition, results of operations and prospects.

In addition, under Russian and Kazakh law, transactions in shares may be invalidated on many grounds, including a sale of shares by a person without the right to dispose of such shares, breach of interested party and/or major transaction rules and/or the terms of transaction approvals issued by government authorities, or failure to register the share transfer in the securities register. As a result, defects in earlier transactions with shares of our subsidiaries (where such shares were acquired from third parties) may cause our title to such shares to be subject to challenge.

Certain of our Russian subsidiaries are required to either purchase or lease the land on which they operate.

Much of the land occupied by privatized Russian companies, including most of our subsidiaries, was not included in the privatizations of these companies and is still owned by federal, regional or municipal governments. The companies use the land pursuant to a special title of perpetual use whereby they have the right to use the land but do not have the right to alienate such land.

The Land Code of the Russian Federation, as amended, which was enacted on October 25, 2001 (the **Land Code**), requires privatized Russian companies to either purchase or lease the land on which they operate by January 1, 2012. In accordance with the current legislation the repurchase price of land plots held under special title of perpetual use is set in the amount of 2.5% of the cadastral value of such land plots. We estimate that the repurchase cost of such land plots is \$50.6 million.

Increasing costs of electricity, natural gas and labor could materially adversely affect our operating margins.

In 2010, our Russian operations purchased approximately 6.0 billion kilowatt-hours (kWh) of electricity, representing 88% of their needs, at a total cost of \$312.8 million, implying an average cost of 5.2 cents per kWh. The restructuring of the Russian power sector that began in 2001 is substantially complete and all government regulation of electricity prices in the wholesale power market is due to expire in 2011. This could lead to higher electricity prices. According to information published by the Ministry for Economic Development of the Russian Federation the average increase in market prices and tariffs on the retail electricity market was 12.5-14.0% in 2010, and is expected to be in the range of 13.5-16.0% in 2011 and in the range of 12.5-14.0% in 2012. Further price increases for electricity may also occur in the future as the power generating companies created in the restructuring are financed by and controlled to a greater extent by the private sector.

Our Russian operations also purchase significant amounts of natural gas, primarily for the production of electricity at our own co-generation facilities, from Gazprom OAO (**Gazprom**). Gazprom is a government-controlled company and the dominant producer and monopoly transporter of natural gas within Russia. Domestic natural gas prices are regulated by the Russian government. These prices have been consistently rising over the last few years until 2009. In 2010, we purchased 1,770.6 million cubic meters of gas at a total cost of \$164.7 million. Russian domestic natural gas

prices are significantly below Western European levels, which presently helps to provide us with a cost advantage over our competitors, an advantage which is expected to diminish as Russian domestic gas prices approach Western European levels. In 2011, the Russian

Table of Contents

Federal Tariff Service set wholesale prices of gas produced by Gazprom for domestic consumers on the territory of the Russian Federation, except for households, in the range of \$56.3 to \$142.4 per thousand cubic meters, depending on the region of the Russian Federation where the gas is purchased.

After the raw materials used in the production process and energy related costs, our labor costs are the next most significant operational cost. Labor costs in Russia have historically been significantly lower than those in the more developed market economies of North America and Western Europe for similarly skilled employees. However, the average wage in Russia has been rising in recent years. According to the Russian Federal State Statistics Service, after adjusting for inflation, the average wage in the Russian Federation has risen at the average annual rate of 8.1% in ruble terms in the 2006-2009 period. Moreover, labor costs in Russia are indexed to and adjusted for inflation. We believe our advantage with respect to our competitors with foreign operations that have historically had to pay higher average wages than those paid in Russia may be reduced.

Higher costs of electricity, natural gas and labor could negatively impact our operating margins, which could have a material adverse effect on our business, financial condition, results of operations and prospects.

Recent and potential developments in the Russian rail transportation sector expose us to uncertainties regarding transportation costs of raw materials and steel products.

Railway transportation is our principal means of transporting raw materials and steel products to our facilities and to customers in Russia and abroad. The Russian rail system is controlled by Russian Railways, an open joint-stock company wholly owned by the Russian government. Russian Railways is a state-sanctioned monopoly responsible for the management of all Russian railroads. The Russian government sets domestic rail freight prices and the terms of transportation, such as, including, terms related to the type of rolling stock to be used for transportation of certain types of cargo; estimated minimum tonnage for the purposes of determining the applicable tariff and others. These rail freight prices are subject to annual adjustment based on, among other factors, inflation and the funding requirements of Russian Railways' capital investment program, which is in turn affected by the acute need to upgrade track infrastructure and passenger- and cargo-handling facilities. In addition, the establishment of the Russian Railways subsidiaries Pervaya Gruzovaya Kompaniya OAO (**First Freight Company**) and Vtoraya Gruzovaya Kompaniya OAO (**Second Freight Company**) and the transfer of 90% of the rolling stock to them, as part of the reform of the Russian rail transportation sector, have led to a significant increase of the costs of use of freight cars.

Our cargoes are currently transported in the railcars of either Russian Railways or third party owners engaged for transportation, as well as in our own railcars. The most significant railcar owners are First Freight Company and Second Freight Company, subsidiaries of Russian Railways, which provide us with their railcars, mainly to transport coal products and iron ore concentrate. At present, only three companies, Russian Railways, First Freight Company and Second Freight Company, possess a sufficiently extensive railcar fleet to service our present and future requirements.

Our subsidiary Mecheltrans works with First Freight Company to arrange for transportation and forwarding of cargoes with the railcar fleet owned by First Freight Company. Our freight volume transported by First Freight Company's railcars amounted to 10.3 million tonnes in 2010, for which we paid \$122.4 million. Mecheltrans has commenced working with Second Freight Company since February 2011.

In 2010, tariffs were indexed once, which resulted in an 9.4% tariff increase. With effect from January 1, 2011, all tariffs have been increased by an additional 8%. If rail freight prices continue to increase, or if there is a disruption in the transportation of our materials and products due to a shortage of available working rolling stock, it could materially adversely affect our business, financial condition, results of operations and prospects.

Table of Contents

We face numerous protective trade restrictions in the export of our steel products and ferroalloys, and we may face export duties in the future.

We face numerous protective tariffs, duties and quotas which reduce our competitiveness in, and limit our access to, particular markets. Several key steel importing countries currently have import restrictions in place on steel products or intend to introduce them in the future. The European Union has a quota system in place with respect to Russian steel imports, which affected our exports to ten countries in Central and Eastern Europe and the Baltic states (Estonia, Lithuania and Latvia) that joined the European Union in 2004 as well as to Romania and Bulgaria, which joined the European Union in 2007. Our sales to third parties in the European Union from our Russian steel facilities constituted approximately 1.6% of our steel segment revenues and approximately 4.9% of our steel segment export revenues in 2010. The export of our steel into the European Union is an important part of our growth strategy. If E.U. quotas are not increased in line with our sales growth objectives, our ability to expand our sales in the European Union and pursue our growth strategy could be limited. In addition, the European Union has imposed antidumping duties on certain of our steel exports.

Our ferroalloys business is also subject to export restrictions. In February 2008, an antidumping duty in the amount of 17.8% was imposed on exports to the European Union of ferrosilicon produced by our subsidiary Bratsk Ferroalloy Plant for a period of five years. Our sales into the European Union constituted approximately 1.6% of our revenues from the ferrosilicon sales and approximately 0.3% of our total ferroalloys segment revenues in 2010.

See Item 4. Information on the Company Steel Segment Trade restrictions and Item 4. Information on the Company Ferroalloys Segment Trade restrictions.

We benefit from Russia's tariffs and duties on imported steel, which may be eliminated in the future.

Russia has in place import tariffs with respect to certain imported steel products. These tariffs generally amount to 5-15% of value. Almost all of our sales of steel products in Russia were protected by these import tariffs in 2010. The Republic of Belarus, the Republic of Kazakhstan and the Russian Federation entered into a Customs Union and implemented a Common Customs Tariff, which came into force on January 1, 2010, reducing import duties on stainless rolled products from 15% to 10%. Creation of this Customs Union, as well as other actions and decisions of Russian authorities in respect of tariffs and duties, can lead to further reduction of import duties.

In August 2007, Russia and Ukraine signed an agreement imposing quotas on the export of Ukrainian steel bars to the Russian market. The total quota of steel bars from Ukraine to Russia was equal to 1,205,000 tonnes during the effective term of the trade agreement and was divided into annual volumes. We believe that we benefited from this agreement because it prevented subsidized Ukrainian exports from reducing the prices we otherwise could obtain for these products in the Russian market. However, the agreement expired on January 1, 2011.

From March 20, 2007 to March 20, 2010, Russia imposed an antidumping duty on corrosion-resistant steel originating in the European Union at the rate of \$840 per tonne. This duty benefited us while it was in force. The elimination of this duty had a negative effect on our sales on the Russian market.

On December 26, 2010, Russia imposed an antidumping duty on corrosion-resistant steel originating in China (including Taiwan), South Korea, Brazil and South Africa at the rate ranging from 4.8% to 62.8% per tonne. This duty is imposed until December 26, 2013 and will benefit our sales on the Russian market while it was in force.

According to available public information, Russia has taken part in negotiations to join the World Trade Organization (the **WTO**). Russia's potential future accession to the WTO could negatively affect our business, financial condition, results of operations and prospects. In particular, Russia's entry into the WTO may require gradual reduction or

elimination of import tariffs and duties on steel products, causing increased competition in the Russian steel market from foreign producers and exporters.

Table of Contents

Our exports to the European Union are subject to REACH regulations.

Chemical substances contained in some of our products, as well as by-products and waste, which we export to or produce in the European Union are subject to regulation (EC) No 1907/2006 on registration, evaluation, authorization and restrictions of use of chemicals (**REACH**) that entered into force on June 1, 2007. Under REACH, we must provide a registration dossier for such substances to the European Chemical Agency (**ECHA**). In accordance with REACH, we pre-registered substantially all the substances that we export to or produce in the E.U. prior to December 1, 2008. In accordance with REACH implementation schedule, prior to December 1, 2010 we registered with ECHA all substances that we export to or produce in the European Union in amount over 1000 metric tonnes per year, and which are subject to REACH registration. We are in compliance with current REACH requirements and we will have to maintain certain resources to ensure compliance with further developing REACH requirements.

REACH provides for a special authorization regime for substances of high concern, including those that are identified from scientific evidence as causing probable serious effects to humans or the environment on a case-by-case basis. To obtain authorization, a manufacturer of substances of high concern is generally required to demonstrate that the risk from the use of the substance is adequately controlled. All substances under the authorization regime are subject to restrictions with respect to manufacture, placing on the market or use. The European Commission may amend or withdraw the authorization, even one given for adequate control, if suitable substitutes have become available. Currently, none of our products contain substances which are considered to be substances of high concern. There is no assurance that our products will not be subject to further restrictions or bans if any substance of high concern is detected in our products, which could have a material adverse effect on our business, financial condition, results of operations and prospects.

The European Commission has planned several revisions of the REACH Regulation taking place until 2019. Compliance with changes to the existing regulations may lead to increased costs, modifications in operating practices and/or further restrictions affecting our products. Any such changes and/or modifications could have a material adverse effect on our business, financial condition, results of operations and prospects.

We are subject to mining risks.

Our business operations, like those of other mining companies, are subject to all of the hazards and risks normally associated with the exploration, development and production of natural resources, any of which could result in production shortfalls or damage to persons or property.

In particular, hazards associated with our open pit mining operations include, but are not limited to: (1) flooding of the open pit; (2) collapses of the open pit wall; (3) accidents associated with the operation of large open pit mining and rock transportation equipment; (4) accidents associated with the preparation and ignition of large-scale open pit blasting operations; (5) deterioration of production quality due to weather; and (6) hazards associated with the disposal of mineralized waste water, such as groundwater and waterway contamination.

Hazards associated with our underground mining operations include but are not limited to: (1) underground fires and explosions, including those caused by flammable gas; (2) cave-ins or ground falls; (3) discharges of gases and toxic chemicals; (4) flooding; (5) sinkhole formation and ground subsidence; and (6) other accidents and conditions resulting from drilling, blasting and removing and processing material from an underground mine, including due to human error.

We are at risk of experiencing any and all of these hazards. The occurrence of such hazards could delay production, increase production costs, result in injury to persons or death, and damage to property, as well as liability for us. For example, on May 30, 2008, there was a cave-in at the Lenin Underground Mine (which led to suspension of operation

for 17 calendar days) and on July 29, 2008 there was a methane flash (which led to suspension of operation for 67 calendar days). Both accidents involved multiple casualties. Also, in September 2010 we suspended operations at New-Olzherassk Underground Mine due to a spontaneous ignition of coal. We plan to resume coal mining operations at New-Olzherassk Underground Mine at the end of the second quarter of 2011.

Table of Contents

Furthermore, the risk of occurrence of these hazards is exacerbated by the significant level of wear of the equipment of our mining enterprises. We are conducting a program of phased replacement and refurbishment of obsolete equipment in order to meet safety requirements at our most dangerous facilities. See Item 8. Financial Information Litigation Environmental and safety.

More stringent environmental laws and regulations or more stringent enforcement or findings that we have violated environmental laws and regulations could result in higher compliance costs and significant fines and penalties, clean-up costs and compensatory damages, or require significant capital investment, or even result in the suspension of our operations, which could have a material adverse effect on our business, financial condition, results of operation and prospects.

Our operations and properties are subject to environmental, worker protection and industrial safety and other laws and regulations in the jurisdictions in which we operate. For instance, our operations generate large amounts of pollutants and waste, some of which are hazardous, such as benzapiren, sulfur oxide, sulfuric acid, nitrogen ammonium, sulfates, nitrites and phenicols. Some of our operations result in the creation of hazardous sludges, including sludges containing base elements such as chromium, copper, nickel, mercury and zinc. The creation, storage and disposal of such hazardous waste is subject to environmental regulations, including some requiring the clean-up of contamination and reclamation, such as requirements for cleaning up highly hazardous waste oil and iron slag. In addition, pollution risks and related clean-up costs are often impossible to assess unless environmental audits have been performed and the extent of liability under environmental and civil laws is clearly determinable. Furthermore, new and more stringent regulations have been introduced in a number of countries in response to the impacts of climate change. See Increased regulations associated with climate change and greenhouse gas emissions may give rise to increased costs and may adversely impact our business and markets.

Generally, there is a greater awareness in Russia of damage caused to the environment by industry than existed during the Soviet era. At the same time, environmental legislation in Russia is generally weaker and less stringently enforced than in the E.U. or the United States. However, recent Russian government initiatives indicate that Russia will introduce new water, air and soil quality standards and increase its monitoring and fines for non-compliance with environmental rules. In addition, we are currently assessing whether our Romanian and Bulgarian operations will face higher environmental compliance costs due to the integration of these countries into the E.U. See note 24(b) to our consolidated financial statements.

Based on the current regulatory environment in Russia and elsewhere where we conduct our operations, as of December 31, 2010, we have not created any reserves for environmental liabilities and compliance costs, other than an accrual in the amount of \$56.2 million for asset retirement obligations. Any change in this regulatory environment could result in actual costs and liabilities for which we have not provided.

Also, in the course, or as a result, of an environmental investigation by Russian governmental authorities, courts can issue decisions requiring part or all of the production at a facility that has violated environmental standards to be halted for a 90-day period. We have been cited in Russia for various violations of environmental regulations in the past and we have paid certain fines levied by regulatory authorities in connection with these infractions. More recently, in March 2011, Rosprirodnadzor, the Russian environmental supervisory authority, claimed 287 million rubles from Chelyabinsk Metallurgical Plant as compensation for damage caused discharging waste water into the river Miass. We are in process of reviewing the claim. Though our production facilities have not been ordered to suspend operations due to environmental violations during the respective periods since we acquired or established them, there are no assurances that environmental protection authorities will not seek such suspensions in the future. In the event that production at any of our facilities is partially or wholly suspended due to this type of sanction, our business, financial condition, results of operations and prospects could be materially adversely affected.

The assets and operations of Bluestone based in West Virginia are subject to U.S. environmental and other regulatory risks. See Risks Relating to Other Countries Where We Operate. In particular, in early 2011, our Bluestone operations suspended work on the construction of a coal washing facility because certain

Table of Contents

limitations contained in the environmental permissions issued with respect to mining activities restricted increases of mining volumes which led to the underutilization of existing washing facilities.

In addition, we are generally not indemnified against environmental liabilities or any required land reclamation expenses of our acquired businesses that arise from activities that occurred prior to our acquisition of such businesses. See Our business strategy envisions additional acquisitions and continued integration, and we may fail to identify suitable targets, acquire them on acceptable terms, identify all potential liabilities associated with them or successfully integrate them into our group.

Increased regulations associated with climate change and greenhouse gas emissions may give rise to increased costs and may adversely impact our business and markets.

Through our mining and power segments, we are a major producer of carbon-related products such as coal, coal concentrate and energy. Coal and coal-based energy are also significant inputs in many of the operations of our steel and ferroalloys segments. A major by-product of burning coal is carbon dioxide (CO₂), which is considered to be a greenhouse gas and generally a source of concern in connection with global warming and climate change.

The December 1997 Kyoto Protocol established a set of greenhouse gas emission targets for developed countries that have ratified the Protocol, including the Russian Federation. In order to give the countries a certain degree of flexibility in meeting their emission reduction targets, the Kyoto Protocol developed mechanisms allowing participating countries to earn and trade emissions credits by way of implementing projects aimed at meeting the Kyoto Protocol targets. Since October 2009, Russia has established a legal procedure for implementing clean development and trading mechanisms provided under the Kyoto Protocol. The European Union has already established greenhouse gas regulations and many other countries, including the United States, are in the process of doing so. The European Union Emissions Trading System (**EU ETS**), which came into effect on 1 January 2005, has had an impact on greenhouse gas and energy-intensive businesses based in the European Union. Our operations in Bulgaria, Lithuania and Romania are currently subject to the EU ETS, as are our EU based customers.

In the United States, various federal, regional and state initiatives to regulate greenhouse gas emissions have been implemented or are under consideration, and, it appears likely that additional national, regional and state regulation of actual greenhouse gas emissions will be enacted in the future. For example, legislation is under consideration in the U.S. Congress that would create a cap-and-trade system for greenhouse gas emissions. Furthermore, the U.S. Environmental Protection Agency (**EPA**) has taken the first steps towards implementing a comprehensive greenhouse gas policy that may adversely affect the business of our Bluestone companies.

The Kyoto Protocol, the EU ETS and current and future regulation of greenhouse gas emissions in the United States could restrict our operations and/or impose significant costs or obligations on us, including requiring additional capital expenditures, modifications in operating practices, and additional reporting obligations. These regulatory programs may also have a negative effect on our production levels, income and cash flows and on our suppliers and customers, which could result in higher costs and lower sales. Inconsistency of regulations particularly between developed and developing countries may also change the competitive position of some of our assets. Finally, we note that even without further legislation or regulation of greenhouse gas emissions, increased awareness and any adverse publicity in the global marketplace about the greenhouse gasses emitted by companies in the steel manufacturing industry could harm our reputation and reduce customer demand for our products.

Our business could be adversely affected if we fail to obtain or extend necessary subsoil licenses and mining and other permits or fail to comply with the terms of our subsoil licenses and mining and other permits.

Our business depends on the continuing validity of our subsoil licenses and the issuance of new and extended subsoil licenses and our compliance with the terms thereof, particularly subsoil licenses for our Russian and Kazakh mining operations. In particular, our reserves categorized as Outside Subsoil License Term Reserves assume that the relevant license will be extended for the term of the expected operational life

Table of Contents

of the subsoil plot. See Item 4. Information on the Company Regulatory Matters Subsoil licensing in Russia Extension of licenses and Mining Segment Mineral reserves (coal, iron ore and limestone) . However, license extension is subject to the license holder being in compliance with the terms of the license. Publicly available information about current market practice and available court practice suggest that regulatory authorities tend to focus on such terms of the license as production levels, operational milestones and license payments, which are considered to be material terms of license. Nevertheless, there is no assurance that this approach will be consistently applied by the regulatory authorities and the courts and that there will be no changes to this approach in the future. Regulatory authorities exercise considerable discretion in the timing of license issuance, extension of licenses and monitoring licensees compliance with license terms. Subsoil licenses and related agreements typically contain certain environmental, safety and production commitments. See Item 4. Information on the Company Regulatory Matters Subsoil licensing in Russia Maintenance and termination of licenses. If regulatory authorities determine that we have violated the material terms of our licenses, it could lead to rejection in license extension or suspension or termination of our subsoil licenses, and to administrative and civil liability. In addition, requirements imposed by relevant authorities may be costly to implement and result in delays in production. Our subsoil licenses expire on dates falling in 2012 through 2033. Our most significant subsoil licenses expire between 2012 and 2024. See the tables setting forth expiry dates of our Russian subsoil licenses in Item 4. Information on the Company Mining Segment and reserves information. Accordingly, these factors may seriously impair our ability to operate our business and realize our reserves which could have a material adverse effect on our business, financial condition, results of operations and prospects.

Our Bluestone operations in the United States are subject to risks relating to mining and other permits required under U.S. federal and state laws. See Risks Relating to Other Countries Where We Operate We must obtain, maintain and comply with numerous U.S. governmental permits and approvals for our operations in the United States, which can be costly and time consuming, and our failure to obtain, renew or comply with necessary permits and approvals could negatively impact our business. The federal agencies responsible for issuing the necessary permits required to conduct mining operations in the United States have increased their scrutiny of permit applications. This is discussed in greater detail below. This has resulted in the permitting process taking longer and becoming more costly in recent years. In addition, citations for violations of those permits have become more frequent and remediation costs associated with correcting such violations have increased substantially.

Failure to comply with existing laws and regulations could result in substantial additional compliance costs or various sanctions which could materially adversely affect our business, financial condition, results of operations and prospects.

Our operations and properties are subject to regulation by various government entities and agencies in connection with obtaining and renewing various licenses, permits, approvals and authorizations, as well as with ongoing compliance with existing laws, regulations and standards. Government authorities in countries where we operate exercise considerable discretion in matters of enforcement and interpretation of applicable laws, regulations and standards, the issuance and renewal of licenses, permits, approvals and authorizations, and in monitoring licensees compliance with the terms thereof which may result in unexpected audits, criminal prosecutions, civil actions and expropriation of property. Authorities have the right to, and frequently do, conduct periodic inspections of our operations and properties throughout the year.

Our failure to comply with existing laws and regulations or to obtain and comply with all approvals, authorizations and permits required for our operations or findings of governmental inspections may result in the imposition of fines or penalties or more severe sanctions including the suspension, amendment or termination of our licenses, permits, approvals and authorizations or in requirements that we cease certain of our business activities, or in criminal and administrative penalties applicable to our officers. Arbitrary government actions directed against other Russian companies (or the consequences of such actions) may generally impact on the Russian economy, including the

securities market. Any such actions, decisions, requirements or sanctions could increase our costs and materially adversely affect our business, financial condition, results of operations and prospects.

Table of Contents

If we fail to meet certain deadlines under our subsoil license for Elga it may be suspended or terminated.

We hold the license to the undeveloped Elga coal deposit in the Sakha Republic, which contains large quantities of export-quality coking and steam coal. As part of the license conditions, as amended in May 2010, we are required to meet certain operational milestones, including the construction of a rail branch line of approximately 315 kilometers in length by December 31, 2011 and completion of construction of the first phase of Elga complex by December 31, 2013. The current construction schedule is very aggressive and, due to limited financing during the period from September 2008 to August 2009 because of the global financial crisis, it may not be achievable. If current construction schedule is not met, our subsoil license for Elga deposit may be suspended or terminated.

The concentration of our shares with our controlling shareholder will limit your ability to influence corporate matters.

Our Chairman, Igor Zyuzin, directly and indirectly owns approximately 66.76% of our common shares. Except in certain cases as provided by the Federal Law On Joint-Stock Companies, dated December 26, 1995, as amended (the **Joint-Stock Companies Law**), resolutions at a shareholders meeting are adopted by a simple majority at a meeting at which shareholders holding more than half of the voting shares are present or represented. Accordingly, Mr. Zyuzin has the power to control the outcome of most matters to be decided by a majority vote at a shareholders meeting and can control the appointment of the majority of directors and the removal of all of the elected directors. In addition, our controlling shareholder is likely to be able to take actions which require a three-quarters supermajority vote of shares represented at such a shareholders meeting, such as amendments to our charter, reorganization, significant sales of assets and other major transactions, if other shareholders do not participate in the meeting. We have also engaged and will likely continue to engage in transactions with related parties, including our controlling shareholder, that may present conflicts of interest, potentially resulting in the conclusion of transactions on less favorable terms than could be obtained in arm's length transactions or transactions that may expose us to risks outside the ordinary course of business. See Item 7. Major Shareholders and Related Party Transactions Related Party Transactions. Thus, our controlling shareholder can take actions that you may not view as beneficial, and as a result, the value of the shares and ADSs could be materially adversely affected.

Our competitive position and future prospects depend on our senior management team.

Our ability to maintain our competitive position and to implement our business strategy is dependent on the services of our senior management team and, in particular, Mr. Zyuzin, our Chairman and controlling shareholder. Mr. Zyuzin has provided, and continues to provide, strategic direction to us.

Moreover, competition in Russia, and in the other countries where we operate, for senior management personnel with relevant expertise is intense due to the small number of qualified individuals. The loss or decline in the services of members of our senior management team or an inability to attract, retain and motivate qualified senior management personnel could have a material adverse effect on our business, financial condition, results of operations and prospects.

Antimonopoly regulation could lead to sanctions with respect to the subsidiaries we have acquired or established or our prices, sales volumes and business practices.

Our business has grown substantially through the acquisition and founding of companies, many of which required the prior approval or subsequent notification of the FAS or its predecessor agencies. Relevant legislation restricts the acquisition or founding of companies by groups of companies or individuals acting in concert without such approval or notification. This legislation is vague in certain parts and subject to varying interpretations. If the FAS were to conclude that a company was acquired or created in contravention of applicable legislation and that competition has

been or could be limited as a result, it could seek redress, including invalidating the transactions that led to or could lead to the limitation of competition, obliging the acquirer or founder to perform activities to restore competition, and seeking the dissolution of the new company created as a result of reorganization. Any of these actions could materially adversely affect our business, financial condition, results of operations and prospects.

Table of Contents

As of March 31, 2011, nine of our companies were included by the FAS in its register of entities with a market share exceeding 35% in the relevant market or with a dominant position on a certain market, including:

Beloretsk Metallurgical Plant as controlling 100% of the market for local telephony services in Beloretsk;

Chelyabinsk Metallurgical Plant as controlling more than 65% of the market for forgings made of stainless steel ingots in the Russian market;

Southern Urals Nickel Plant as controlling more than 65% of the market for nickel in sulfate and hydroxide in the Russian Federation;

Izhstal as controlling more than 35% but less than 65% of the market for graded high-speed steel and its substitute and more than 65% of the market for small shaped graded high-speed steel;

Vyartsilya Metal Products Plant as controlling more than 65% of the market of railroad transportation of cargo for third parties and companies on the track section from Vyartsilya village to Vyartsilya station;

Kuzbass Power Sales Company as controlling more than 50% of the electricity trading market in the Kemerovo region;

Mechel-Energo as controlling more than 50% of the market for the trading of electricity in the cities of Mezhdurechensk, Myski and Novokuznetsk;

Yakutugol, including its subsidiaries Dzhebariki-Khaya Mine OAO and Kandalassk Open Pit Mine OAO as controlling more than 65% of the coal market of the Sakha Republic (an administrative region of Russia in eastern Siberia, also known as Yakutia) and as holding a dominant market position as the sole supplier of Far East Generating Company OAO (**Far East Generating Company**), a power plant designed to consume only the type of coal produced by Yakutugol and its subsidiaries. In 2010, Dzhebariki-Khaya Mine OAO and Kandalassk Open Pit Mine OAO were merged into Yakutugol and ceased to exist as separate legal entities. However, respective changes to replace Dzhebariki-Khaya Mine OAO and Kandalassk Open Pit Mine OAO with Yakutugol have not been yet made in the FAS register; and

Moscow Coke and Gas Plant as controlling 100% of the market for cargo transportation services on the company's rail siding in the Lenin District of Moscow region from the Obmennaya station to the Zavodskaya station.

When our companies are included in the register of entities with a market share exceeding 35% in the relevant market or with a dominant position on a certain market, this does not by itself result in restrictions on the activities of such entities. However, these entities may be subject to additional FAS oversight by reason of their having been deemed to have a dominant market position.

In 2008, the FAS issued a number of directives to our companies placing certain restrictions on our business practices. On May 13, 2008, the FAS issued a directive ordering Mechel and Southern Kuzbass Coal Company, as a group of companies holding a dominant position on the Russian coking coal market, to fulfill the following requirements:

to support certain production volumes and product lines;

to provide, to the extent possible, equal supply terms to all customers without discrimination against companies not forming part of this group of companies;

not to restrict other companies from supplying coking coal to the same geographical area of operations; and
to notify the FAS prior to any increase in domestic prices of coking coal, steam coal and coking coal concentrate, if such increase amounts to more than 10% of the relevant price used 180 days before the

Table of Contents

date such increase is planned to take place, with submission to the FAS of the financial and economic reasoning for the planned increase of prices.

In connection with the establishment of Mechel Mining, the subsidiary into which we consolidated certain of our mining assets, we received a directive from the FAS dated June 23, 2008, which contains requirements as to the activities of Mechel Mining and its subsidiaries Yakutugol and Southern Kuzbass Coal Company, as a group of companies holding a dominant position on the Russian coking coal market. The requirements are the same as those described above.

On October 10, 2008, the FAS issued two new directives addressed to Mechel Mining Management with respect to Yakutugol and Southern Kuzbass Coal Company, as a group of companies holding a dominant position on the Russian coking coal market, ordering Mechel Mining Management to fulfill the following requirements:

not to reduce or terminate production of coking coal concentrate without prior approval of the FAS, unless there is no demand for such products;

to perform all contracts related to coking coal concentrate production or other products (works or services) in relation to which these companies are or may be included in the register of entities with a market share exceeding 35% in the relevant market; and

to provide equal supply terms to all customers without discriminating against companies outside of Mechel Mining Management group and to avoid terms of supply which would compensate Mechel Mining Management group for unjustified expenses or yield the Mechel Mining Management group any profit that is significantly higher than it could be in a competitive market.

In 2009, we received five directives from the FAS, addressed to Mechel-Steel Management, Beloretsk Metallurgical Plant, Izhstal, Chelyabinsk Metallurgical Plant, Vyartsilya Metal Products Plant and Urals Stampings Plant. Furthermore, in connection with our transfer of management of Southern Urals Nickel Plant to Mechel Ferroalloys Management and the consolidation of our ferroalloy assets under our subsidiary Oriel Resources, in October 2008 the FAS issued one directive addressed to Mechel Ferroalloys Management and one directive addressed to Oriel Resources, and in November 2008 the FAS issued one additional directive addressed to Mechel and Bratsk Ferroalloy Plant. The requirements under all eight of these directives are substantially similar to those described above in connection with the directives dated October 10, 2008, except: (1) that they relate to our production and sales of ferrosilicon, nickel products, stampings, wire products and certain other steel products; and that (2) the directive addressed to Mechel and Bratsk Ferroalloy Plant also requires them to satisfy ferrosilicon demand on the Russian market, where they hold a dominant position, subject to available production capacity, and to maintain production and equipment required for the ferrosilicon production and supply.

In August 2008, as a result of an antimonopoly investigation into the business of our subsidiaries Mechel Trading House, Southern Kuzbass Coal Company, Yakutugol and Mechel Trading, the FAS found them to have abused their dominant position on the Russian market of coking coal concentrate. The FAS issued a directive requiring these subsidiaries to: (1) refrain from establishing monopolistically high or low prices; (2) provide, to the extent possible, equal supply terms to all customers without discrimination; (3) submit economic justifications for each coking coal concentrate price increase of more than 5% as compared to the prices of the previous quarter to the FAS, during the next 5 years; (4) reduce sale prices by 15% for the period from September 2008 until December 2008; and (5) offer to conclude long-term supply contracts of at least three years duration with a formula of price calculation and with fixed volumes for the entire period of the contract with consumers of coking coal concentrate. Furthermore, the FAS initiated administrative proceedings against Mechel Trading House, Southern Kuzbass Coal Company and Yakutugol which resulted in fines being imposed on these companies in the total amount of 797.7 million rubles, which equals

nearly 5% of these subsidiaries total sales of coking coal concentrate for 2007.

Table of Contents

In the event of breach of the terms of business conduct set forth by the FAS, the FAS may seek to impose fines for violations of antimonopoly and administrative legislation. Such fines may include an administrative fine of up to 15% of the proceeds of sale of all goods, works and services on the market where such violation was committed, but not more than 2% of gross proceeds of sale of all goods, works and services. Russian legislation also provides for criminal liability for violations of antimonopoly legislation in certain cases. Furthermore, for systematic violations, a court may order, pursuant to a suit filed by the FAS, a compulsory split-up or spin-off of the violating company, and no affiliation can be preserved between the new entities established as result of such a mandatory reorganization. The imposition of any such liability on us or our subsidiaries could materially adversely affect our business, financial condition, results of operations and prospects.

Negative publicity associated with any antimonopoly, administrative, criminal or other investigation or prosecution carried out with respect to our business practices, regardless of the outcome, could damage our reputation and result in a significant drop in the price of our shares and ADSs and could materially adversely affect our business, financial condition, results of operations and prospects.

In the event that the minority shareholders of our subsidiaries were to successfully challenge past interested party transactions or do not approve interested party transactions in the future, we could be limited in our operational flexibility.

We own less than 100% of the equity interests in some of our subsidiaries. In addition, certain of our wholly owned subsidiaries have previously had other shareholders. We and our subsidiaries have carried out, and continue to carry out, transactions among our companies and affiliates, as well as transactions with other parties which may be considered to be interested party transactions under Russian law, requiring intra-group approval by disinterested directors, disinterested independent directors or disinterested shareholders depending on the nature of the transaction and the parties involved. The provisions of Russian law defining which transactions must be approved as interested party transactions are subject to different interpretations, and these transactions may not always have been properly approved, including by former shareholders. We cannot make any assurances that our and our subsidiaries applications of these rules will not be subject to challenge by shareholders. Any such challenges, if successful, could result in the invalidation of transactions, which could have a material adverse effect on our business, financial condition, results of operations and prospects.

In addition, Russian law requires a three-quarters majority vote of the holders of voting stock present at a shareholders meeting to approve certain transactions and other matters, including, for example, charter amendments, reorganizations, major transactions involving assets in excess of 50% of the assets of the company, acquisition by the company of outstanding shares and certain share issuances. In some cases, minority shareholders may not approve interested party transactions requiring their approval or other matters requiring approval of minority shareholders or supermajority approval. In the event that these minority shareholders were to successfully challenge past interested party transactions, or do not approve interested party transactions or other matters in the future, we could be limited in our operational flexibility and our business, financial condition, results of operations and prospects could be materially adversely affected.

In the event certain minority shareholder lawsuits are resolved against us, our financial condition and results of operations could be materially adversely affected.

Russian corporate law allows minority shareholders holding as little as a single share in a company to have standing to bring claims against the company challenging decisions of its governing bodies. These features of Russian corporate law are often abused by minority shareholders, who can bring claims in local courts seeking injunctions and other relief for which, as a practical matter, we may not receive notice. Any such actions by minority shareholders, if resolved against us, could have a material adverse effect on our business, financial condition, results of operations and

prospects.

Table of Contents

A substantial majority of our employees are represented by trade unions, and our operations depend of good labor relations.

As of December 31, 2010, approximately 65% of all our employees were represented by trade unions. Although we have not experienced any business interruption at any of our companies as a result of labor disputes from the dates of their respective acquisition by us and we consider our relations with our employees to be good, under Russian law unions have the legal right to strike and other Russian companies with large union representation have been recently affected by interruptions due to strikes, lockouts or delays in renegotiations of collective bargaining agreements. Our businesses could also be affected by similar events if our relationships with our labor force and trade unions worsen in the future. Although industry agreements with trade unions on coal and mining and metallurgical industry have been signed, we have not yet renewed all our corresponding collective bargaining agreements. If we are unable to update collective bargaining agreements on similar conditions at the expiry of their terms or our employees are dissatisfied with the terms of renewed collective bargaining agreements, any industrial action by our employees could have material adverse effects on our business, financial condition, results of operations and prospects.

Approximately half of the Bluestone companies' workforce is represented by the United Mine Workers of America (UMWA) labor union and are covered by the Bituminous Coal Wage Agreement of 2007 which expires at the end of 2011. We are currently in negotiations with the UMWA with respect to two more of our operations in West Virginia, the employees of which elected in April 2010 to be also represented by the UMWA. Though we believe the Bluestone companies have a good relationship with the UMWA, there are no assurances that these relations will not deteriorate in the future. Our U.S. employees have the right at any time under the U.S. National Labor Relations Act to form or affiliate with a union and the current presidential administration in the United States has indicated that it will support legislation that may make it easier for employees to unionize. Any further unionization of employees could adversely affect the stability of our U.S. production and negatively impact the financial performance of our U.S. operations. Additionally, due to the increased risk of strikes and other work-related stoppages that may be associated with union operations in the coal industry, our competitors who operate without union labor may have a competitive advantage in areas where they compete with our unionized operations.

Bluestone companies have liabilities with respect to post-retirement benefits for our U.S. employees, which could be more burdensome if certain factors beyond our control are changed or corrected.

The Bluestone companies we acquired have long-term liabilities with respect to pension obligations and post-retirement welfare benefit plans. The Bluestone companies contribute to multi-employer defined benefit pension plans sponsored by the UMWA. In the event of our partial or complete withdrawal from any multi-employer plan which is underfunded, we would be liable for a proportionate share of such plan's unfunded vested benefits. In the event that any other contributing employer withdraws from any plan which is underfunded, and such employer (or any member in its controlled group) cannot satisfy its obligations under the plan at the time of withdrawal, then we, along with the other remaining contributing employers, would be liable for our proportionate share of such plan's unfunded vested benefits. As of June 30, 2010, the UMWA pension plan's unfunded liability was \$4.1 billion. Furthermore, in September 2010, the UMWA Funds reported to the United States Department of the Treasury, as required under the Pension Protection Act of 2006, that the UMWA pension plan is in Seriously Endangered Status for the plan year beginning July 1, 2010 due to funded percentage below 80%. When a pension plan is certified to be in seriously endangered status, federal law requires the plan to adopt a funding improvement plan aimed at restoring the financial health of the plan. The funding improvement plan may include increased contributions to the plan and/or modifications to certain future benefit accruals. Now, it is up to the Bituminous Coal Operators Association (BCOA) and the UMWA to negotiate such an improvement plan. As the signatory companies will be bound to whatever the BCOA and the UMWA negotiate as to an improvement plan, Bluestone's signatory companies may see a required higher level of contributions in the future.

The Bluestone companies' post-retirement medical obligations have been estimated based on actuarial assumptions, including actuarial estimates, assumed discount rates, estimates of life expectancy, and changes in healthcare costs. If our assumptions relating to these benefits change in the future or are incorrect, we may

Table of Contents

be required to record additional expenses. In addition, future regulatory and accounting changes relating to these benefits could result in increased obligations or additional costs, which could also have a material adverse effect on our business, financial condition, results of operations and prospects.

We do not carry the types of insurance coverage customary in more economically developed countries for a business of our size and nature, and a significant event could result in substantial property loss and inability to rebuild in a timely manner or at all.

The insurance industry is still developing in Russia, and many forms of insurance protection common in more economically developed countries are not available in Russia on comparable terms, including coverage for business interruption. At present, most of our Russian production facilities are not insured, and we have no coverage for business interruption or for third-party liability, other than insurance required under Russian law, collective agreements, loan agreements or other undertakings. Some of our international production facilities are not covered by comprehensive insurance typical for such operations in Western countries. We cannot assure you that the insurance we have in place is adequate for the potential losses and the liability we may suffer.

Since most of our production facilities lack insurance covering their property, if a significant event were to affect one of our facilities, we could experience substantial financial and property losses, as well as significant disruptions in our production activity, for which we would not be compensated by business interruption insurance.

Since we do not maintain separate funds or otherwise set aside reserves for these types of events, in case of any such loss or third-party claim for damages we may be unable to seek any recovery for lost or damaged property or compensate losses due to disruption of production activity. Any such uninsured loss or event may have a material adverse effect on our business, financial condition, results of operations and prospects.

If transactions, corporate decisions or other actions of members of our group and their predecessors-in-interest were to be challenged on the basis of non-compliance with applicable legal requirements, the remedies in the event of any successful challenge could include the invalidation of such transactions, corporate decisions or other actions or the imposition of other liabilities on such group members.

Businesses of our group, or their predecessors-in-interest at different times, have taken a variety of actions relating to the incorporation of entities, share issuances, share disposals and acquisitions, mandatory buy-out offers, acquisition and valuation of property, including land plots, interested party transactions, major transactions, decisions to transfer licenses, meetings of governing bodies, other corporate matters and antimonopoly issues that, if successfully challenged on the basis of non-compliance with applicable legal requirements by competent state authorities, counterparties in such transactions or shareholders of the relevant members of our group or their predecessors-in-interest, could result in the invalidation of such actions, transactions and corporate decisions, restrictions on voting rights or the imposition of other liabilities. As applicable laws of Russia, Kazakhstan and other emerging countries are subject to varying interpretations, we may not be able to defend successfully any challenge brought against such actions, decisions or transactions, and the invalidation of any such actions, transactions and corporate decisions or imposition of any restriction or liability could have a material adverse effect on our business, financial condition, results of operations and prospects.

We have used certain information in this document that has been sourced from third parties.

We have sourced certain information contained in this document from independent third parties, including private companies, government agencies and other publicly available sources. We believe these sources of information are reliable and that the information fairly and reasonably characterizes the industry in countries where we operate. However, although we take responsibility for compiling and extracting the data, we have not independently verified

this information. In addition, the official data published by Russian federal, regional and local governments may be substantially less complete or researched than those of Western countries. Official statistics may also be produced on different bases than those used in Western countries.

Risks Relating to Our Shares and the Trading Market

Our ability to pay dividends depends primarily upon receipt of sufficient funds from our subsidiaries.

Because we are a holding company, our ability to pay dividends depends primarily upon receipt of sufficient funds from our subsidiaries. Under Russian law, dividends may be declared and paid only out of net profits calculated under Russian accounting standards and as long as certain conditions have been met, including if the value of the net assets, calculated under Russian accounting standards, is not less (and would not become less as a result of the proposed dividend payment) than the sum of the charter capital, the reserve fund and the difference between the liquidation value and the par value of the issued and outstanding preferred shares. See Item 10. Charter and Certain Requirements of Russian Legislation Description of Capital Stock Dividends . Currently some of our subsidiaries do not meet this criteria and can not approve payment of, or pay dividends. See Risks Relating to the Russian Federation One or more of our subsidiaries could be forced into liquidation on the basis of formal non-compliance with certain requirements of Russian law, which could materially adversely affect our business, financial condition, results of operations and prospects .

Furthermore, the payment of dividends by our subsidiaries and/or our ability to repatriate such dividends may, in certain instances, be subject to taxes, statutory restrictions, retained earnings criteria, and covenants in our subsidiaries financing arrangements and are contingent upon the earnings and cash flow of those subsidiaries. See note 18 to our consolidated financial statements.

The depositary may be required to take certain actions due to Russian law requirements which could adversely impact the liquidity and value of the shares and ADSs.

If at any time the depositary believes that the shares deposited with it against issuance of ADSs represent (or, upon accepting any additional shares for deposit, would represent) a percentage of shares which exceeds any threshold or limit established by any applicable law, directive, regulation or permit, or satisfies any condition for making any filing, application, notification or registration or obtaining any approval, license or permit under any applicable law, directive or regulation, or taking any other action, the depositary may (1) close its books to deposits of additional shares in order to prevent such thresholds or limits being exceeded or conditions being satisfied or (2) take such steps as are, in its opinion, necessary or desirable to remedy the consequences of such thresholds or limits being exceeded or conditions being satisfied and to comply with any such law, directive or regulation, including, causing *pro rata* cancellation of ADSs and withdrawal of underlying shares from the depositary receipt program to the extent necessary or desirable to so comply.

In addition, given that the depositary is already the record owner of approximately 35% of our common shares under our common ADS and GDS programs and of approximately 18.17% of our preferred shares under our preferred ADS program, and if the preferred shares become entitled to the same voting rights as the common shares, then the following requirements may become applicable to the depositary:

Under Russian corporate law, a person that has acquired more than 30%, 50% or 75% of the common shares and voting preferred shares of an open stock company such as Mechel (including, for such purposes, the shares already owned by such person and its affiliates) will, except in certain limited circumstances, be required to make, within 35 days of acquiring such shares, a public tender offer for all other shares of the same class and for securities convertible into such shares (mandatory offer). From the moment of the relevant acquisition until the date the offer is sent to the company, the person making the offer and its affiliates will be able to register for quorum purposes and vote only 30% (or 50% or 75%, as the case may be) of the company's common shares and voting preferred shares (regardless of the size of their actual holdings). See Item 10. Charter and Certain Requirements of Russian Legislation Change in Control Anti-takeover protection . Under Russian law, the

depository may be considered the owner of the shares underlying the ADSs, and as such may be subject to the mandatory public tender offer rules. See As the depository may be considered the owner of the shares underlying the ADSs, these shares may be arrested or seized in legal proceedings in Russia against the depository.

Table of Contents

Under Russian antimonopoly legislation, certain transactions resulting in a shareholder (or a group of persons, as defined by Russian law) holding directly more than 25%, 50% or 75% of the voting capital stock of a company (such as Mechel) or the right to control the company indirectly must be approved in advance by FAS. See Item 10. Charter and Certain Requirements of Russian Legislation Change in Control Approval of the Russian Federal Antimonopoly Service . The depositary thus may need such prior approval in the future. The depositary has received general interpretive guidance from the FAS that it need not obtain the approval referred to above in connection with depositary receipt programs such as our ADS programs. If, however, the FAS were to rescind or disregard its above mentioned interpretation, the ADS programs would be subject to a de facto limit of 24.99% of Mechel's outstanding voting shares, unless the depositary could obtain FAS approval for a higher percentage.

Under the Federal Law of the Russian Federation On the Procedure for Foreign Investment in Companies With Strategic Impact on the National Defense and Security of the Russian Federation (the **Strategic Industries Law**) dated April 29, 2008, the acquisition by a foreign investor, or a group of entities which includes a foreign investor, of (1) 50% or more of the voting capital stock of a company which is considered to be a strategic enterprise as defined by the Strategic Industries Law (a **Strategic Company**) or (2) 10% or more of the voting capital stock of a Strategic Company which is engaged in the geological study, exploration or production of natural resources on plots that are deemed by the Russian government to be subsoil plots of federal importance (a **Strategic Subsoil Company**), must be previously approved by the governmental commission. Some of our subsidiaries are considered Strategic Companies or Strategic Subsoil Companies. See Item 3. Key Information Risk Factors Legal Risks and Uncertainties Expansion of limitations on foreign investment in strategic sectors could affect our ability to attract and/or retain foreign investments . If the total number of our voting shares held by the depositary (together with any entities within its group) reaches the thresholds described above, the depositary may be required to obtain approval of the governmental commission. The depositary has received general interpretive guidance from FAS, which is competent to issue such guidance, that it does not need to obtain the approval referred to above in connection with depositary receipt programs such as our ADS programs. If, however, FAS were to rescind or disregard its above mentioned interpretation, the ADS programs would be subject to a de facto limit on the number of shares, unless the depositary could obtain FAS approval for a higher percentage. See Item 4. Information on the Company Regulatory Matters The Strategic Industries Law .

An inability to deposit shares into the ADS programs in exchange for ADSs due to the aforementioned limits or other similar regulations or circumstances may affect the liquidity and the value of your investment in the shares and ADSs.

As the depositary may be considered the owner of the shares underlying the ADSs, these shares may be arrested or seized in legal proceedings in Russia against the depositary.

Because a court interpreting Russian law may not recognize ADS holders as beneficial owners of the underlying shares, it is possible that holders of ADSs could lose all their rights to those shares if the assets of the depositary in Russia are seized or arrested. In that case, holders of ADSs would lose their entire investment.

A court interpreting Russian law may treat the depositary as the beneficial owner of the shares underlying the ADSs. This is different from the way other jurisdictions treat ADSs. In the United States, although shares may be held in the depositary's name or to its order, making it a legal owner of the shares, the ADS holders are the beneficial, or real, owners. In U.S. courts, an action against the depositary unrelated to its capacity as depositary under the ADS program would not result in the beneficial owners losing their rights with regard to the underlying shares. Russian law does not make the same distinction between legal and beneficial ownership, and it may only recognize the rights of the depositary in whose name the underlying shares are held, but not the rights of ADS holders to the underlying shares.

Thus, in proceedings brought against a depositary, whether or not related to shares underlying ADSs, Russian courts may treat those underlying shares as the assets of the depositary, open to seizure or arrest.

Table of Contents

Voting rights with respect to the shares represented by our ADSs are limited by the terms of the relevant deposit agreement for the ADSs and relevant requirements of Russian law.

ADS holders have no direct voting rights with respect to the shares represented by the ADSs. They can only exercise voting rights with respect to the shares represented by ADSs in accordance with the provisions of the deposit agreements relating to the ADSs and relevant requirements of Russian law. Therefore, there are practical limitations upon the ability of ADS holders to exercise their voting rights due to the additional procedural steps which are involved. For example, the Joint-Stock Companies Law and our charter require us to notify shareholders not less than 30 days prior to the date of any meeting of shareholders and at least 70 days prior to the date of an extraordinary meeting to elect our Board of Directors via publication of a notice in the Russian official newspaper *Rossiyskaya Gazeta*. Our common shareholders, as well as our preferred shareholders in cases when they have voting rights, will be able to exercise their voting rights by either attending the meeting in person or voting by power of attorney.

For ADS holders, in accordance with the deposit agreements, we will provide the notice to the depository. The depository has in turn undertaken, as soon as practicable thereafter, to mail to ADS holders notice of such any meeting of shareholders, copies of voting materials (if and as received by the depository from us) and a statement as to the manner in which instructions may be given by ADS holders. To exercise their voting rights, ADS holders must then timely instruct the depository how to vote their shares. As a result of this extra procedural step involving the depository, the process for exercising voting rights may take longer for ADS holders than for holders of shares. ADSs for which the depository does not receive timely voting instructions will not be voted at any meeting.

In addition, although securities regulations expressly permit the depository to split the votes with respect to the shares underlying the ADSs in accordance with instructions from ADS holders, there is little court or regulatory guidance on the application of such regulations, and the depository may choose to refrain from voting at all unless it receives instructions from all ADS holders to vote the shares in the same manner. Holders of ADSs may thus have significant difficulty in exercising voting rights with respect to the shares underlying the ADSs. There can be no assurance that holders and beneficial owners of ADSs will: (1) receive notice of shareholder meetings to enable the timely return of voting instructions to the depository; (2) receive notice to enable the timely cancellation of ADSs in respect of shareholder actions; or (3) be given the benefit of dissenting or minority shareholders' rights in respect of an event or action in which the holder or beneficial owner has voted against, abstained from voting or not given voting instructions.

ADS holders may be unable to repatriate their earnings.

Dividends that we may pay in the future on the shares represented by the ADSs will be declared and paid to the depository in rubles. Such dividends will be converted into U.S. dollars by the depository and distributed to holders of ADSs, net of the fees and charges of, and expenses incurred by, the depository, together with taxes withheld and any other governmental charges. The ability to convert rubles into U.S. dollars is subject to the currency markets. Although there is an active market for the conversion of rubles into U.S. dollars, including the interbank currency exchange and over-the-counter and currency futures markets, the functioning of this market in the future is not guaranteed.

ADS holders may not be able to benefit from the United States-Russia income tax treaty.

Under Russian law, dividends paid to a non-resident holder of the shares generally will be subject to Russian withholding tax at a rate of 15%. This tax may potentially be reduced to 5% or 10% for U.S. holders of the shares that are legal entities and organizations and to 10% for U.S. holders of the shares that are individuals under the Convention between the United States of America and the Russian Federation for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with respect to Taxes on Income and Capital (the **United States-Russia income tax**

treaty), provided a number of conditions are satisfied. However, Russian tax rules on the application of double tax treaty benefits to individuals are unclear and there is no certainty that advance clearance would be possible. The Russian tax rules applicable to ADS holders are characterized by significant uncertainties. In a number of clarifications, the Ministry of Finance of the Russian

Table of Contents

Federation expressed a view that ADS holders (rather than the depository) should be treated as the beneficial owners of the underlying shares for the purposes of double tax treaty provisions applicable to taxation of dividend income from the underlying shares, provided that the tax residencies of the ADS holders are duly confirmed. However, in the absence of any specific provisions in the Russian tax legislation with respect to the concept of beneficial ownership and taxation of income of beneficial owners, it is unclear how the Russian tax authorities and courts will ultimately treat the ADS holders in this regard. Thus, we may be obliged to withhold tax at standard non-treaty rates when paying out dividends, and U.S. ADS holders may be unable to benefit from the United States-Russia income tax treaty. See Item 10. Additional Information Taxation Russian Income and Withholding Tax Considerations for additional information.

Capital gains from the sale of ADSs may be subject to Russian income tax.

Under Russian tax legislation, gains realized by non-resident legal entities or organizations from the disposition of Russian shares and securities, as well as financial instruments derived from such shares, such as the ADSs, may be subject to Russian profits tax or withholding income tax if immovable property located in Russia constitutes more than 50% of our assets. However, no procedural mechanism currently exists to withhold and remit this tax with respect to sales made to persons other than Russian companies and foreign companies with a registered permanent establishment in Russia. Gains arising from the disposition on foreign stock exchanges of the foregoing types of securities listed on these exchanges are not subject to taxation in Russia.

Gains arising from the disposition of the foregoing types of securities and derivatives outside of Russia by U.S. holders who are individuals not resident in Russia for tax purposes will not be considered Russian source income and will not be taxable in Russia. Gains arising from disposition of the foregoing types of securities and derivatives in Russia by U.S. holders who are individuals not resident in Russia for tax purposes may be subject to tax either at the source in Russia or based on an annual tax return, which they may be required to submit with the Russian tax authorities.

Holders of ADSs may have limited recourse against us and our directors and executive officers because most of our operations are conducted outside the United States and most of our directors and all of our executive officers reside outside the United States.

Our presence outside the United States may limit ADS holders' legal recourse against us. Mechel is incorporated under the laws of the Russian Federation. Most of our directors and all of our executive officers reside outside the United States, principally in Russia. A substantial portion of our assets and the assets of most of our directors and executive officers are located outside the United States. As a result, holders of our ADSs may be limited in their ability to effect service of process within the United States upon us or our directors and executive officers or to enforce in a U.S. court a judgment obtained against us or our directors and executive officers in jurisdictions outside the United States, including actions under the civil liability provisions of U.S. securities laws. In addition, it may be difficult for holders of ADSs to enforce, in original actions brought in courts in jurisdictions outside the United States, liabilities predicated upon U.S. securities laws.

There is no treaty between the United States and the Russian Federation providing for reciprocal recognition and enforcement of foreign court judgments in civil and commercial matters. These limitations may deprive investors of effective legal recourse for claims related to investments in the ADSs. The deposit agreements provide for actions brought by any party thereto against us to be settled by arbitration in accordance with the Commercial Arbitration Rules of the American Arbitration Association, provided that any action under the U.S. federal securities laws or the rules or regulations promulgated thereunder may, but need not, be submitted to arbitration. The Russian Federation is a party to the United Nations (New York) Convention on the Recognition and Enforcement of Foreign Arbitral Awards, but it may be difficult to enforce arbitral awards in the Russian Federation due to a number of factors,

including the inexperience of Russian courts in international commercial transactions, official and unofficial political resistance to enforcement of awards against Russian companies in favor of foreign investors and Russian courts inability to enforce such orders.

Table of Contents

We and the Justice persons may offer additional preferred shares and preferred ADSs in the future, and these and other sales may adversely affect the market price of the preferred shares and preferred ADSs.

As of the date of this document, of the 138,756,915 issued preferred shares, 58,044,572 preferred shares are held by James C. Justice II, James C. Justice III, James C. Justice Companies Inc. and Jillean L. Justice (collectively, the **Justice persons**) and the remaining 55,502,766 preferred shares are held by our wholly-owned subsidiary Skyblock Limited. The Justice Persons acquired their preferred shares in connection with the sale of their Bluestone coking coal business located in Beckley, West Virginia to us in May 2009. During 2010 the Justice Persons disposed some of the preferred shares they held. The Justice persons may dispose of all or part of the remaining preferred shares they hold through one or more offerings or broker trades in the future. It is also possible that we may decide to offer additional preferred shares and preferred ADSs in the future, including the 55,502,766 preferred shares held by our wholly-owned subsidiary Skyblock Limited. Additional offerings or sales of preferred shares and preferred ADSs by us or the Justice Persons, or the public perception that such offerings or sales may occur, could have an adverse effect on the market price of our preferred shares and preferred ADSs.

The price of our shares and ADSs could be volatile and could drop unexpectedly, making it difficult for investors to resell our shares or ADSs at or above the price paid.

The price at which our shares and ADSs trade is influenced by a large number of factors, some of which are specific to us and our operations and some of which are related to the mining, steel and ferroalloy industries and equity markets in general. As a result of these factors, investors may not be able to resell their shares or ADSs at or above the price paid for them. In particular, the following factors, in addition to other risk factors described in this section, may have a material impact on the market price of our shares and ADSs:

Investor perception of us as a company;

Actual or anticipated fluctuations in our revenues or operating results;

Announcement of intended acquisitions, disposals or financings, or speculation about such acquisitions, disposals or financings;

Changes in our dividend policy, which could result from changes in our cash flow and capital position;

Sales of blocks of our common shares, common ADSs, preferred shares or preferred ADSs by significant shareholders, including the Justice persons;

Price and timing of any refinancing of our indebtedness;

Potential litigation involving us;

Changes in financial estimates and recommendations by securities research analysts;

Fluctuations in Russian and international capital markets, including those due to events in other emerging markets;

The performance of other companies operating in similar industries;

Regulatory developments in the markets where we operate, especially Russia, Kazakhstan and the United States;

International political and economic conditions, including the effects of fluctuations in foreign exchange rates, interest rates and oil prices and other events such as terrorist attacks, military operations and natural disasters and the uncertainty related to these developments;

News or analyst reports related to markets or industries in which we operate; and

General investor perception of investing in Russia.

Table of Contents

Risks Relating to the Russian Federation

Emerging markets such as Russia are subject to greater risks than more developed markets, and financial turmoil in developed or other emerging markets could cause the value of our shares and ADSs to fluctuate widely.

Investors in emerging markets such as the Russian Federation should be aware that these markets are subject to greater risk than more developed markets, including in some cases significant legal, economic and political risks. Investors should also note that the value of securities of Russian companies is subject to rapid and wide fluctuations due to various factors. Accordingly, investors should exercise particular care in evaluating the risks involved and must decide for themselves whether, in light of those risks, their investment is appropriate. Generally, investment in emerging markets is only suitable for sophisticated investors who fully appreciate the significance of the risks involved.

Economic risks

Economic instability in Russia could adversely affect our business and the value of our shares and ADSs.

The Russian economy has been subject to abrupt downturns in the past. In particular, on August 17, 1998, in the face of a rapidly deteriorating economic situation, the Russian government defaulted on its ruble-denominated securities, the CBR stopped its support of the ruble and a temporary moratorium was imposed on certain foreign currency payments. These actions resulted in an immediate and severe devaluation of the ruble and a sharp increase in the rate of inflation; a substantial decline in the prices of Russian debt and equity securities; and an inability of Russian issuers to raise funds in the international capital markets. These problems were aggravated by a major banking crisis in the Russian banking sector after the events of August 17, 1998, as evidenced by the termination of the banking licenses of a number of major Russian banks. This further impaired the ability of the banking sector to act as a consistent source of liquidity to Russian companies and resulted in the losses of bank deposits in some cases.

From 2000 to 2008, the Russian economy experienced positive trends, such as annual increases in the gross domestic product, a relatively stable Russian ruble, strong domestic demand, rising real wages and a reduced rates of inflation. However, these trends were interrupted by the global financial crisis in late 2008, which led to a substantial decrease in the gross domestic product's growth rate, ruble depreciation and a decline in domestic demand. The Russian government has taken certain anti-crisis measures using the stabilization fund and hard currency reserves in order to soften the impact of the economic crisis on the Russian economy and support the value of the ruble. As a result, following a decline by 7.9% in 2009, the Russian gross domestic product grew by 14.7% in 2010, according to Rosstat. However, the full impact of global economic crisis on Russia is not yet clear, and it is possible that the Russian economy could continue to be impacted in the near future. Further economic instability in

Russia could have a material adverse effect on our business, financial condition, results of operations and prospects and the value of our shares and ADSs.

The Russian banking system is still developing, and another banking crisis could place severe liquidity constraints on our business.

We and our Russian subsidiaries hold a substantial majority of ruble and foreign currency cash in Russian banks, including Russian banking subsidiaries of foreign banks, and a substantial portion of our loans are from Russian banks, including state-owned banks such as Sberbank, VTB Bank and Gazprombank. Moreover, we rely on the Russian banking system to complete various day-to-day fund transfers and other actions required to conduct our business with customers, suppliers, lenders and other counterparties.

While the impact of the global financial crisis on the Russian banking system has been contained by the actions by the CBR, the risk of further instability remains high. With few exceptions (notably the state owned banks), the Russian banking system suffers from weak depositor confidence, high concentration of exposure to certain borrowers and their affiliates, poor credit quality of borrowers and related party transactions. Risk management, corporate governance and transparency and disclosure remain below international best practices.

Table of Contents

In the recent global financial crisis, Russian banks were faced with a number of problems simultaneously, such as withdrawal of deposits by customers, payment defaults by borrowers and deteriorating asset values and ruble depreciation. Russian banks faced and continue to face serious mismatches in their liabilities (consisting in large part of foreign debt) and assets (loans to Russian borrowers and investments in Russian assets and securities).

These weaknesses in the Russian banking sector make the sector more susceptible to market downturns or economic slowdowns including due to defaults by Russian borrowers that may occur during such market downturn or economic slowdown. The continuation or worsening of the banking crisis or the bankruptcy or insolvency of the banks in which we hold our funds could prevent us from accessing our funds or affect our ability to complete banking transactions in Russia, or may result in the loss of our deposits altogether, which could have a material adverse effect on our business, results of operations, financial condition and prospects.

The infrastructure in Russia needs significant improvement and investment, which could disrupt normal business activity.

The infrastructure in Russia largely dates back to the Soviet era and has not been adequately funded and maintained since the dissolution of the Soviet Union. Particularly affected are the rail and road networks, power generation and transmission systems, communication systems and building stock. The deterioration of the infrastructure in Russia harms the national economy, disrupts the transportation of goods and supplies, adds costs to doing business and can interrupt business operations. These factors could have a material adverse effect on our business, financial condition, results of operations and prospects.

The Russian economy and the value of our shares and ADSs could be materially adversely affected by fluctuations in the global economy.

The recent turmoil in the international credit markets and the global economic slowdown have resulted in increased volatility in the capital markets in many countries, including Russia. As has happened in the past, financial problems or an increase in the perceived risks associated with investing in emerging economies could dampen foreign investment in Russia and Russian businesses could face severe liquidity constraints, further materially adversely affecting the Russian economy. Additionally, because Russia produces and exports large amounts of oil, the Russian economy is especially vulnerable to the price of oil on the world market and a decline in the price of oil could slow or disrupt the Russian economy or undermine the value of the ruble against foreign currencies. Russia is also one of the world's largest producers and exporters of metal products and its economy is vulnerable to fluctuations in world commodity prices and the imposition of tariffs and/or antidumping measures by any of its principal export markets.

As many of the factors that affect the Russian and global economies affect our business and the business of many of our domestic and international customers, our business could be materially adversely affected by a prolonged downturn affecting the Russian or global economy. In addition to reduced demand for our products, we may experience increases in overdue accounts receivable from our customers, some of whom may face liquidity problems and potential bankruptcy. Our suppliers may raise their prices, eliminate or reduce trade financing or reduce their output. A decline in product demand, a decrease in collectability of accounts receivable or substantial changes in the terms of our suppliers' pricing policies or financing terms, or the potential bankruptcy of our customers or contract counterparties may have a material adverse effect on our business, financial condition, results of operations and prospects.

In addition, a deterioration in macroeconomic conditions could require us to reassess the value of goodwill on certain of our assets, recorded as the difference between the fair value of the assets of business acquired and its purchase price. This goodwill is subject to impairment tests on an ongoing basis. The weakening macroeconomic conditions in the countries in which we operate and/or a significant difference between the performance of an acquired company

and the business case assumed at the time of acquisition could require us to write down the value of the goodwill or portion of such value. See note 2(n) to our consolidated financial statements.

Table of Contents

Political and social risks

Political and governmental instability could materially adversely affect our business, financial condition, results of operations and prospects and the value of our shares and ADSs.

Since 1991, Russia has sought to transform itself from a one-party state with a centrally-planned economy to a democracy with a market economy. As a result of the sweeping nature of the reforms, and the failure of some of them, the Russian political system remains vulnerable to popular dissatisfaction, including dissatisfaction with the results of privatizations in the 1990s, as well as to demands for autonomy from particular regional and ethnic groups.

Current and future changes in the government, conflicts between federal government and regional or local authorities, major policy shifts or lack of consensus between various branches of the government and powerful economic groups could disrupt or reverse economic and regulatory reforms. Any disruption or reversal of reform policies could lead to political or governmental instability or the occurrence of conflicts among powerful economic groups, resulting in an adverse impact on Russia's economy and investment climate, which could have a material adverse effect on our business, financial condition, results of operations and prospects and the value of our shares and ADSs.

Corruption and negative publicity could negatively impact our business and the value of our shares and ADSs.

The local press and international press have reported high levels of corruption in Russia, including unlawful demands by government officials and the bribery of government officials for the purpose of initiating investigations by government agencies. Press reports have also described instances in which government officials engaged in selective investigations and prosecutions to further the commercial interests of certain government officials or certain companies or individuals. Additionally, there are reports of the Russian media publishing disparaging articles in return for payment. If we are accused of involvement in government corruption, the resulting negative publicity could disrupt our ability to conduct our business and impair our relationships with customers, suppliers and other parties, which could have a material adverse effect on our business, financial condition and results of operations and the value of our shares and ADSs.

Shortage of skilled Russian labor could materially adversely affect our business, financial condition, results of operations and prospects.

Currently the Russian labor market suffers from a general shortage of skilled and trained workers, and we compete with other Russian companies to hire and retain such workers. In Russia, the working age population has declined due to a relatively low birth rate at the end of the 1980s and through the early 1990s. In 2010, Rosstat estimated Russia's population at 142 million, a decline of almost seven million from 1992. Although the birth rate recently reached its highest rate in 15 years, the population continues to decline due to a relatively low birth rate, an aging population and low life expectancy. Russia's working age population is estimated to decline by 10-20 million by 2025. If the present trend continues without a migration inflow to Russia, the decreasing working population will become a barrier to economic growth around 2015, according to the National Human Development Report for the Russian Federation produced by the United Nations Development Program in 2008. A shortage of skilled Russian labor combined with restrictive immigration policies could materially adversely affect our business, financial condition, results of operations and prospects.

Legal risks and uncertainties

Deficiencies in the legal framework relating to subsoil licensing subject our licenses to the risk of governmental challenges and, if our licenses are suspended or terminated, we may be unable to realize our reserves, which could materially adversely affect our business, financial condition, results of operations and prospects.

Most of the existing subsoil licenses in Russia date from the Soviet era. During the period between the dissolution of the Soviet Union in August 1991 and the enactment of the first post-Soviet subsoil licensing law

Table of Contents

in the summer of 1992, the status of subsoil licenses and Soviet-era mining operations was unclear, as was the status of the regulatory authority governing such operations. The Russian government enacted the Procedure for Subsoil Use Licensing on July 15, 1992, which came into effect on August 20, 1992 (the **Licensing Regulation**). As was common with legislation of this time, the Licensing Regulation was passed without adequate consideration of transition provisions and contained numerous gaps. In an effort to address the problems in the Licensing Regulation, the Ministry of Natural Resources (the **MNR**) issued ministerial acts and instructions that attempted to clarify and, in some cases, modify the Licensing Regulation. Many of these acts contradicted the law and were beyond the scope of the MNR's authority, but subsoil licensees had no option but to deal with the MNR in relation to subsoil issues and comply with its ministerial acts and instructions. Thus, it is possible that licenses applied for and/or issued in reliance on the MNR's acts and instructions could be challenged by the prosecutor general's office as being invalid. In particular, deficiencies of this nature subject subsoil licensees to selective and arbitrary governmental claims.

Legislation on subsoil rights still remains internally inconsistent and vague, and the regulator's acts and instructions are often arguably inconsistent with legislation. Subsoil licensees thus continue to face the situation where both failing to comply with the regulator's acts and instructions and choosing to comply with them places them at the risk of being subject to arbitrary governmental claims, whether by the regulator or the prosecutor general's office. Our competitors may also seek to deny our rights to develop certain natural resource deposits by challenging our compliance with tender rules and procedures or compliance with license terms.

An existing provision of the law that a license may be suspended or terminated if the licensee does not comply with the significant or material terms of a license is an example of such a deficiency in the legislation. The MNR (including its successor agency since May 13, 2008, the Ministry of Natural Resources and Ecology) has not issued any interpretive guidance on the meaning of these terms. Similarly, under Russia's civil law system, court decisions interpreting these terms do not have any precedential value for future cases and, in any event, court decisions in this regard have been inconsistent. These deficiencies result in the regulatory authorities, prosecutors and courts having significant discretion over enforcement and interpretation of the law, which may be used to challenge our subsoil rights selectively and arbitrarily.

Moreover, during the tumultuous period of the transformation of the Russian planned economy into a free market economy in the 1990s, documentation relating to subsoil licenses was not properly maintained in accordance with administrative requirements and, in many cases, was lost or destroyed. Thus, in many cases, although it may be clearly evident that a particular enterprise has mined a licensed subsoil area for decades, the historical documentation relating to its subsoil licenses may be incomplete. If, through governmental or other challenges, our licenses are suspended or terminated we would be unable to realize our reserves, which could materially adversely affect our business, financial condition, results of operations and prospects.

Weaknesses relating to the Russian legal system and legislation create an uncertain investment climate.

Russia is still developing the legal framework required to support a market economy. The following weaknesses relating to the Russian legal system create an uncertain investment climate and result in risks with respect to our legal and business decisions:

inconsistencies between and among the Constitution, federal law, presidential decrees and governmental, ministerial and local orders, decisions, resolutions and other acts;

conflicting local, regional and federal rules and regulations;

the lack of fully developed corporate and securities laws;

substantial gaps in the regulatory structure due to the delay or absence of implementing legislation;

the relative inexperience of judges in interpreting legislation;

the lack of full independence of the judicial system from commercial, political and nationalistic influences;

Table of Contents

difficulty in enforcing court orders;

a high degree of discretion or arbitrariness on the part of governmental authorities; and

still-developing bankruptcy procedures that are subject to abuse.

All of these weaknesses could affect our ability to protect our rights under our licenses and under our contracts, or to defend ourselves against claims by others. We make no assurances that regulators, judicial authorities or third parties will not challenge our compliance with applicable laws, decrees and regulations.

One or more of our subsidiaries could be forced into liquidation on the basis of formal non-compliance with certain requirements of Russian law, which could materially adversely affect our business, financial condition, results of operations and prospects.

Certain provisions of Russian law may allow a court to order liquidation of a Russian legal entity on the basis of its formal non-compliance with certain requirements during formation, reorganization or during its operation. There have been cases in the past in which formal deficiencies in the establishment process of a Russian legal entity or non-compliance with provisions of Russian law have been used by Russian courts as a basis for liquidation of a legal entity. For example, under Russian corporate law, if a Russian company's net assets calculated on the basis of Russian accounting standards at the end of its third or any subsequent financial year, fall below its share capital, the company must decrease its share capital to the level of its net assets value or initiate a voluntary liquidation. In addition, if a Russian company's net assets calculated on the basis of Russian accounting standards at the end of its second or any subsequent financial year, fall below the minimum share capital required by law, the company must initiate voluntarily liquidation not later than six months after the end of such financial year. If the company fails to comply with either of the requirements stated above within the prescribed time limits, the company's creditors may accelerate their claims and demand reimbursement of applicable damages, and governmental authorities may seek involuntary liquidation of the company. Many Russian companies have negative net assets due to very low historical asset values reflected on their balance sheets prepared in accordance with Russian accounting standards; however, their solvency, i.e., their ability to pay debts as they become due, is not otherwise adversely affected by such negative net assets. Currently, we have following subsidiaries with negative net assets: Coke-Invest, Kaslinsky Architectural Art Casting Plant OOO, Port Kambarka, Metals Recycling, Tikhvin Ferroalloy Plant, Mechel Mining Management, Sky-Extra, Mechel-Remservice, Mechel-Zakazchik, SocResource, Mechel-Region, Mecheltrans Management. Also, the net assets of Mechel Mining are below its current share capital. To cure this, the shareholders have approved the decrease of the share capital and relevant changes to the charter are now being registered.

If involuntary liquidation were to occur, then we may be forced to reorganize the operations we currently conduct through the affected subsidiaries. Any such liquidation could lead to additional costs, which could materially adversely affect our business, financial condition, results of operations and prospects.

Selective government action could have a material adverse effect on the investment climate in Russia and on our business, financial condition, results of operations and prospects and the value of our shares and ADSs.

Governmental authorities in Russia have a high degree of discretion. Press reports have cited instances of Russian companies and their major shareholders being subjected to government pressure through prosecutions of violations of regulations and legislation which are either politically motivated or triggered by competing business groups.

In mid-2008, Mechel came under public criticism by the Russian government. Repeated statements were made accusing Mechel of using tax avoidance schemes and other improprieties. Ultimately the allegations regarding tax

avoidance were not confirmed by the tax authorities, but the antimonopoly investigation resulted in imposition of a fine and a number of FAS directives regarding our business practices. See Risks Relating to Our Business and Industry Antimonopoly regulation could lead to sanctions with respect to the subsidiaries we have acquired or established or our prices, sales volumes and business practices and Item 8. Financial Information Litigation Antimonopoly.

Table of Contents

Selective government action, if directed at us or our controlling shareholder, could have a material adverse effect on our business, financial condition, results of operations and prospects and the value of our shares and ADSs.

Due to still-developing law and practice related to minority shareholder protection in Russia, the ability of holders of our shares and ADSs to bring, or recover in, an action against us may be limited.

In general, minority shareholder protection under Russian law derives from supermajority shareholder approval requirements for certain corporate actions, as well as from the ability of a shareholder to demand that the company purchase the shares held by that shareholder if that shareholder voted against or did not participate in voting on certain types of actions. Companies are also required by Russian law to obtain the approval of disinterested shareholders for certain transactions with interested parties. See Item 10. Additional Information Description of Capital Stock Rights attaching to common shares. Disclosure and reporting requirements have also been enacted in Russia. Concepts similar to the fiduciary duties of directors and officers to their companies and shareholders are also expected to be further developed in Russian legislation; for example, amendments to the Russian Code of Administrative Offenses imposing administrative liability on members of a company's board of directors or management board for violations committed in the maintenance of shareholder registers and the convening of general shareholders' meetings. While these protections are similar to the types of protections available to minority shareholders in U.S. corporations, in practice, the enforcement of these and other protections has not been effective.

The supermajority shareholder approval requirement is met by a vote of 75% of all voting shares that are present at a shareholders' meeting. Thus, controlling shareholders owning less than 75% of the outstanding shares of a company may hold 75% or more of the voting power if enough minority shareholders are not present at the meeting. In situations where controlling shareholders effectively have 75% or more of the voting power at a shareholders' meeting, they are in a position to approve amendments to a company's charter, reorganizations, significant sales of assets and other major transactions, which could be prejudicial to the interests of minority shareholders. See Risks Relating to Our Business and Industry The concentration of our shares with our controlling shareholder will limit your ability to influence corporate matters

Shareholder liability under Russian legislation could cause us to become liable for the obligations of our subsidiaries.

The Civil Code of the Russian Federation, as amended (the **Civil Code**), and the Joint-Stock Companies Law generally provide that shareholders in a Russian joint-stock company are not liable for the obligations of the joint-stock company and bear only the risk of loss of their investment. This may not be the case, however, when one entity is capable of determining decisions made by another entity. The entity capable of determining such decisions is deemed an effective parent. The entity whose decisions are capable of being so determined is deemed an effective subsidiary. Under the Joint-Stock Companies Law, an effective parent bears joint and several responsibility for transactions concluded by the effective subsidiary in carrying out these decisions if:

 this decision-making capability is provided for in the charter of the effective subsidiary or in a contract between such entities; and

 the effective parent gives obligatory directions to the effective subsidiary based on the above-mentioned decision-making capability.

In addition, an effective parent is secondarily liable for an effective subsidiary's debts if an effective subsidiary becomes insolvent or bankrupt due to the fault of an effective parent resulting from its action or inaction. This is the case no matter how the effective parent's ability to determine decisions of the effective subsidiary arises. For example, this liability could arise through ownership of voting securities or by contract. Other shareholders of the effective subsidiary may claim compensation for the effective subsidiary's losses from the effective parent which caused the

effective subsidiary to take action or fail to take action knowing that such action or failure to take action would result in losses. Accordingly, we could be liable in some cases

Table of Contents

for the debts of our subsidiaries. This liability could have a material adverse effect on our business, financial condition, results of operations and prospects.

Shareholder rights provisions under Russian law could result in significant additional obligations on us.

Russian law provides that shareholders that vote against or do not participate in voting on certain matters have the right to request that the company redeem their shares at value determined in accordance with Russian law. The decisions of a general shareholders' meeting that trigger this right include:

decisions with respect to a reorganization;

the approval by shareholders of a major transaction, which, in general terms, is a transaction involving property worth more than 50% of the gross book value of the company's assets calculated according to Russian accounting standards, regardless of whether the transaction is actually consummated, except for transactions undertaken in the ordinary course of business; and

the amendment of the company's charter in a manner that limits shareholder rights.

Our and our Russian subsidiaries' obligation to purchase shares in these circumstances, which is limited to 10% of our or the subsidiary's net assets, respectively, calculated in accordance with Russian accounting standards at the time the matter at issue is voted upon, could have a material adverse effect on our business, financial condition, results of operations and prospects due to the need to expend cash on such obligatory share purchases.

The lack of a central and rigorously regulated share registration system in Russia may result in improper record ownership of our shares and ADSs.

Ownership of Russian joint-stock company shares (or, if the shares are held through a nominee or custodian, then the holding of such nominee or custodian) is determined by entries in a share register and is evidenced by extracts from that register. Currently, there is no central registration system in Russia. Share registers are maintained by the companies themselves or, if a company has more than 50 shareholders, by licensed registrars located throughout Russia. Regulations have been adopted regarding the licensing conditions for such registrars, as well as the procedures to be followed by both companies maintaining their own registers and licensed registrars when performing the functions of registrar. In practice, however, these regulations have not been strictly enforced, and registrars generally have relatively low levels of capitalization and inadequate insurance coverage. Moreover, registrars are not necessarily subject to effective governmental supervision. Due to the lack of a central and rigorously regulated share registration system in Russia, transactions in respect of a company's shares could be improperly or inaccurately recorded, and share registration could be lost through fraud, negligence or oversight by registrars incapable of compensating shareholders for their misconduct. This creates risks of loss not normally associated with investments in other securities markets. Furthermore, the depository, under the terms of the deposit agreements governing record keeping and custody of our ADSs, is not liable for the unavailability of shares or for the failure to make any distribution of cash or property with respect thereto due to the unavailability of the shares. See Item 10. Additional Information Description of Capital Stock Registration and transfer of shares.

Characteristics of and changes in the Russian tax system could materially adversely affect our business, financial condition, results of operations and prospects and the value of our shares and ADSs.

Generally, Russian companies are subject to numerous taxes. These taxes include, among others:

profits tax;

value-added tax (**VAT**);

unified social tax;

mineral extraction tax; and

property and land taxes.

Table of Contents

Laws related to these taxes have been in force for a short period relative to tax laws in more developed market economies and few precedents with regard to the interpretation of these laws have been established. Global tax reforms commenced in 1999 with the introduction of Part One of the Tax Code of the Russian Federation, as amended (the **Russian Tax Code**), which sets general taxation guidelines. Since then, Russia has been in the process of replacing legislation regulating the application of major taxes such as corporate profits tax, VAT and property tax with new chapters of the Russian Tax Code.

In practice, the Russian tax authorities generally interpret the tax laws in ways that rarely favor taxpayers, who often have to resort to court proceedings to defend their position against the tax authorities. Events within the Russian Federation suggest that the tax authorities may be taking a more assertive position in their interpretations of the legislation and assessments. Differing interpretations of tax regulations exist both among and within government ministries and organizations at the federal, regional and local levels, creating uncertainties and inconsistent enforcement. Tax declarations, together with related documentation such as customs declarations, are subject to review and investigation by a number of authorities, each of which may impose severe fines, penalties and interest charges. Generally, in an audit, taxpayers are subject to inspection with respect to the three calendar years which immediately preceded the year in which the audit is carried out. Previous audits do not completely exclude subsequent claims relating to the audited period because Russian tax law authorizes upper-level tax inspectorates to re-audit taxpayers which were audited by subordinate tax inspectorates. In addition, on July 14, 2005, the Russian Constitutional Court issued a decision that allows the statute of limitations for tax liabilities to be extended beyond the three-year term set forth in the tax laws if a court determines that a taxpayer has obstructed or hindered a tax audit. As a result of the fact that none of the relevant terms are defined, tax authorities may have broad discretion to argue that a taxpayer has obstructed or hindered an audit and ultimately seek back taxes and penalties beyond the three year term. In some instances, new tax regulations have been given retroactive effect.

Moreover, financial results of Russian companies cannot be consolidated for tax purposes. Therefore, each of our Russian subsidiaries pays its own Russian taxes and may not offset its profit or loss against the loss or profit of any of our other subsidiaries. In addition, intercompany dividends paid by Russian companies are subject to a withholding tax of: (1) 0%, if distributed to company which has continuously held not less than a 50% share in the charter capital of the company paying dividends and the cost of acquisition of this share exceeded 500 million rubles (the latter condition expired on January 1, 2011, and does not apply to dividends accrued for 2010 and subsequent periods); (2) 9%, if distributed to other Russian companies and/or individuals who are Russian tax residents; and (3) 15%, if distributed to foreign companies and individuals who are not Russian tax residents. Dividends from foreign companies to Russian companies are subject to a tax of 9%. Taxes paid in foreign countries by Russian companies may be offset against payment of these taxes in the Russian Federation up to the maximum amount of the Russian tax liability. In order to apply the offset, the company is required to confirm the payment of taxes in the foreign country. The confirmations must be authorized by the tax authority of the foreign country if taxes were paid by the company itself, and the confirmation must be authorized by the tax agent if taxes were withheld by the tax agent under foreign tax law or an international tax agreement.

In addition, application of current Russian thin capitalization rules could affect our ability to deduct interest on certain borrowings that we would otherwise be able to deduct. In particular, we may not be able to deduct interest on loans we extend to our subsidiaries or on borrowings which our subsidiaries receive from independent banks and which are guaranteed by us.

The foregoing conditions create tax risks in Russia that are more significant than typically found in countries with more developed tax systems, imposing additional burdens and costs on our operations, including management resources. In addition to our tax burden, these risks and uncertainties complicate our tax planning and related business decisions, potentially exposing us to significant fines and penalties and enforcement measures despite our best efforts

at compliance. See also Risks Relating to the Russian Federation Legal risks and uncertainties Selective government action could have a material adverse effect on the investment climate in Russia and on our business, financial condition, results of operations and prospects and the value of our shares and ADSs.

Table of Contents

Vaguely drafted Russian transfer pricing rules expose our business to the risk of significant additional liabilities.

Russian transfer pricing rules, effective since 1999, give Russian tax authorities the right to control prices for transactions between related entities and certain other types of transactions between unrelated parties, such as foreign trade transactions or transactions with significant price fluctuations if the transaction price deviates by more than 20% from the market price. Special transfer pricing rules apply to operations with securities and derivative instruments. The Russian transfer pricing rules are vaguely drafted, and are subject to interpretation by Russian tax authorities and courts. Due to the uncertainties in interpretation of transfer pricing legislation, the tax authorities may challenge our prices and make adjustments which could affect our tax position. As of the end of 2007, as a result of various tax audits of our companies we received assessments from the tax authorities for transfer-pricing related taxes, interest and penalties totaling 496 million rubles relating to the years 2004-2005. As a result of tax audits held in 2009, Korshunov Mining Plant was subject to an additional tax assessment of transfer pricing related taxes and incurred penalties in the amount of 73.3 million rubles for the year 2005. Korshunov Mining Plant filed a court claim against the tax authorities seeking the invalidation of this tax assessment. Courts of three instances rejected the claim. Korshunov Mining Plant filed an appeal to the Supreme Arbitrazh Court but the court rejected the claim. See Item 8. Financial Information Litigation Tax. If similar assessments are upheld in the future, our business, financial condition, results of operations and prospects could be materially adversely affected. In addition, we could face significant losses associated with the assessed amount of underpaid prior tax and related interest and penalties. Under Russian law, tax authorities may review past tax periods relating to the years 2008-2010 and make claims in connection with such reviews. See also Characteristics of and changes in the Russian tax system could materially adversely affect our business, financial condition, results of operations and prospects and the value of our shares and ADSs and Item 8. Financial Information Litigation Tax.

In addition, a number of draft amendments to the transfer pricing law have been introduced which, if implemented, would considerably tighten the existing law. The proposed changes, among other things, may shift the burden of proving market prices from the tax authorities to the taxpayer, cancel the existing permitted deviation threshold and introduce specific documentation requirements for proving market prices.

Expansion of limitations on foreign investment in strategic sectors could affect our ability to attract and/or retain foreign investments.

On April 29, 2008, the Federal Law On the Procedure for Foreign Investment in Companies With Strategic Impact on the National Defense and Security of the Russian Federation was adopted. See Item 4. Information on the Company Regulatory Matters The Strategic Industries Law.

As our subsidiary Southern Urals Nickel Plant carries out exploration and production on land plots with nickel and cobalt ore deposits which are included in the official list of subsoil plots of federal importance first published on March 5, 2009 in the Russian official gazette *Rossiyskaya Gazeta* and as amended on August 13, 2010 (the **Strategic Subsoil List**), it qualifies as a Strategic Company and is subject to special regulation. Our subsidiaries Port Posiet, Port Kambarka and Port Temryuk are included in the register of natural monopolies, and therefore are also Strategic Companies.

According to the Strategic Industries Law, the activity of a business entity which is deemed to occupy a dominant position in the production and sale of metals and alloys with special features which are used in production of weapons and military equipment is also deemed to be strategic activity. Our subsidiary Urals Stampings Plant has been found by the FAS to hold a dominant position on the market of carbonic, alloyed and heat-resistant alloyed stampings. Such products are of a type generally used in the production of weapons and military equipment. Therefore, Urals Stampings Plant may also qualify as a Strategic Company. Furthermore, entities producing and distributing industrial explosives and entities that operate equipment containing radioactive materials are also deemed to be Strategic

Companies. Thus, our subsidiaries Yakutugol and Vzryvprom also qualify as Strategic Companies, as they both hold licenses to produce industrial explosives and Yakutugol, in addition, holds a license to operate equipment containing radioactive materials.

Table of Contents

Therefore, any transfer, directly or indirectly, to a foreign investor or its group of entities of a stake, or certain rights, in Port Posiet, Port Kambarka, Port Temryuk, Southern Urals Nickel Plant, Yakutugol, Vzryvprom and, possibly, Urals Stampings Plant, which, according to the Strategic Industries Law, is deemed to transfer control, as described in Item 4. Information on the Company Regulatory Matters The Strategic Industries Law, will be subject to prior approval from the state authorities. Likewise, a sale to a foreign investor or its group of entities of a stake in Mechel which provides control (as defined in the Strategic Industries Law) over Port Posiet, Port Kambarka, Port Temryuk, Southern Urals Nickel Plant, Yakutugol, Vzryvprom and, potentially, Urals Stampings Plant, will also be subject to prior approval in accordance with the Strategic Industries Law.

Additionally, in case a foreign investor or its group of entities which is a holder of securities of Port Posiet, Port Kambarka, Port Temryuk, Southern Urals Nickel Plant, Yakutugol, Vzryvprom and, potentially, Urals Stampings Plant, becomes a holder of voting shares in amount which is considered to give them direct or indirect control over these companies in accordance with the Strategic Industries Law due to the allocation of voting shares as a result of certain corporate procedures provided by Russian law (e.g., as a result of a buy-back by the relevant company of its shares, conversion of preferred shares into common shares, or holders of preferred shares becoming entitled to vote at a general shareholders meeting in cases provided under Russian law), such shareholders will have to apply for approval within three months after they acquired such control.

In this connection, there is a risk that the requirement to receive prior or subsequent approvals and the risk of not being granted such approvals might affect our ability to attract foreign investments, create joint ventures with foreign partners with respect to our companies that qualify as Strategic Companies or effect restructuring of our group which might, in turn, materially adversely affect our business, financial condition, results of operations and prospects.

Risks Relating to Other Countries Where We Operate

We face risks similar to those in Russia in other countries of the former Soviet Union and former Soviet-bloc countries in Eastern and Central Europe.

We currently have five steel mills in Romania, a wire products plant in Lithuania, a power plant in Bulgaria and two mining projects in Kazakhstan. We may acquire additional operations in countries of the former Soviet Union, former Soviet-bloc countries in Eastern and Central Europe or elsewhere. As with Russia, those countries are emerging markets subject to greater political, economic, social, tax and legal risks than more developed markets. In many respects, the risks inherent in transacting business in these countries are similar to those in Russia, especially those risks set out above in Economic risks, Political and social risks and Legal risks and uncertainties.

New regulatory requirements for obtaining certain permits under Section 404 of the Clean Water Act may result in delays, additional costs or the inability to proceed with certain U.S. mining operations.

For some of our proposed U.S. mining operations, we will need to obtain certain permits issued by the United States Army Corps of Engineers (**Corps**) under the Clean Water Act § 404 (**404 Permits**). Such permits are required in order to undertake construction of valley fills, coal refuse disposal areas, and other activities associated with those operations that would have the effect of filling (covering) ephemeral, intermittent or perennial streams. Since approximately 2003, the Corps issuance of 404 Permits for coal-related fill projects (especially large-scale surface mines) has been the subject of continual litigation and other challenges by environmental groups, resulting in several court opinions that had the effect of substantially restricting issuance of such permits and curtailing coal production.

On June 11, 2009, the U.S. Environmental Protection Agency (**EPA**), Corps, and other U.S. agencies with control over this permitting program issued a Memorandum of Understanding (**MOU**) that identified several steps that will be taken as to pending and future 404 permit applications, in order to implement an Enhanced Coordinated Review

Process for the purpose of significantly reducing the harmful environmental consequences of Appalachian surface coal mining operations. Since release of the MOU, very few 404 permits have been issued, and each of those permits that were issued included modifications to the proposed mining

Table of Contents

plan and additional environmental monitoring provisions that require adaptive management and revisions to mine plans should certain indicia of harm to the aquatic system be observed. Companies with 404 permit applications that have been pending for a year or longer are currently required to engage in meetings with Corps and EPA staff before those applications are submitted for further processing, and the timeline for issuance of such permits is uncertain. It is also widely expected that some of those permit applications will be denied, or that EPA will exercise its Clean Water Act veto authority over some 404 permits that are issued by the Corps.

Although we have no immediate need for new 404 permits to continue our current U.S. mining operations in the short term, some of our future mine plans (including the continuation of existing mines) will require the issuance of such permits to proceed. Whether the regulatory environment will be such that 404 permits for those projects may be expected to be issued in a timely manner, in the form required for such plans to be implemented, is difficult to predict. Our inability to obtain such permits or any unexpected delay or additional costs incurred in connection with securing such permits could have a material adverse effect on the financial performance of our U.S. coal mining operations.

The cost and availability of reliable transportation could negatively impact our U.S. coal mining operations.

The availability and cost of reliable transportation for our U.S. coal is a critical factor in a customer's purchasing decision. Increases in transportation costs could make coal a less competitive source of energy or could make our coal production less competitive than coal produced from other sources.

Our U.S. mines depend on a single rail road carrier, Norfolk Southern. Disruption of any transportation services due to weather-related problems, flooding, drought, accidents, mechanical difficulties, strikes, lockouts, bottlenecks, and other events could temporarily impair our ability to supply coal to our customers. For example, the snowfall in the winter of 2009-2010, which was the heaviest in the last decade, caused delays in our supplies of coal to customers. Furthermore, improvement works carried on at the Norfolk and Southern Hartland Corridor Tunnel caused delays in railcar deliveries to our mines for up to four days. In addition, after Norfolk Southern made certain cuts in equipment and personnel during the economic slowdown in 2009, it is currently facing difficulties in building up its transportation capacity to meet the increasing demand for railcars. Transportation providers may face increased regulation or other difficulties in the future that may impair our ability to supply coal to our customers at a competitive cost. If there are disruptions of the transportation services and we are unable to make alternative arrangements to ship our coal, the financial performance of our U.S. coal mining operations could be materially adversely affected.

Defects in title or loss of any leasehold interests in our U.S. properties could limit our ability to conduct mining operations or result in significant cost increases.

We conduct a significant part of our mining operations in the United States on properties that we lease. A title defect or the loss of any lease could adversely affect our ability to mine the associated reserves. In addition, from time to time the rights of third parties for competing uses of adjacent, overlying, or underlying lands such as for oil and gas activity, coalbed methane, production, pipelines, roads, easements and public facilities may affect our ability to operate as planned if our title is not superior or alternative arrangements cannot be negotiated. Title to much of our leased properties and fee mineral rights is not usually verified until we make a commitment to develop a property, which may not occur until after we have obtained necessary permits and completed exploration of the property. Our right to mine some of our reserves may be adversely affected if defects in title or boundaries exist or competing interests cannot be resolved. In order to obtain leases or other rights to conduct our mining operations on property where these defects exist, we may incur unexpected costs or be compelled to leave un-mined the affected reserves, resulting in a material adverse effect on the financial performance of our U.S. coal mining operations.

Table of Contents

A shortage of skilled labor in the mining industry could negatively impact the profitability of our U.S. coal mining operations.

Efficient coal mining using modern techniques and equipment requires skilled workers. Ideally, we seek to hire individuals with sufficient level of experience to ensure a minimum level of operational efficiency. In recent years, the U.S. coal mining industry has faced a shortage of skilled workers, thus increasing costs and decreasing productivity. In particular, we are facing difficulties in recruiting skilled workers at our underground operations. Furthermore, the competition from neighboring mining companies for attracting skilled workers is significant. In the event the shortage of experienced labor continues or worsens, it could have an adverse impact on our labor productivity and costs and our ability to expand production in the event there is an increase in the demand for our coal.

The Bluestone companies are subject to extensive U.S. laws, government regulations and other requirements relating to the protection of the environment, health and safety and other matters and face a highly litigious environment.

Like other mining businesses in the United States, our Bluestone companies are subject to a wide range of rules and regulations, including those governing water discharges, air emissions, the management, treatment, storage, disposal and transportation of hazardous materials and waste, protection of plants, wildlife and other natural resources, worker health and safety, reclamation and restoration of properties after mining activities cease, surface subsidence from underground mining, blasting operations, noise, the effects of mining on surface water and groundwater quality and availability, and reporting and recordkeeping. Violations of these requirements can result in fines, penalties, required facility upgrades or operational changes, suspension or revocation of permits and, in severe cases, temporary or permanent shut-down of our mines. We incur substantial costs in order to comply with U.S. governmental regulations that apply to our operations in the United States.

We could also become subject to investigation or cleanup obligations, or related third-party personal injury or property damage claims, in connection with on-site or off-site contamination issues or other non-compliance with U.S. regulatory requirements. In particular, under the U.S. Comprehensive Environmental Response, Compensation and Liability Act (**CERCLA** or commonly known as the **Superfund law**) and analogous state laws, current and former property owners and operators, as well as hazardous waste generators, arrangers and transporters, can be held liable for investigation and cleanup costs at properties where there has been a release or threatened release of hazardous substances. Such laws can also require so-called potentially responsible parties to fund the restoration of damaged natural resources or agree to restrictions on future uses of impacted properties.

Liability under such laws can be strict, joint, several and retroactive. Accordingly, we could theoretically incur material liability (whether as a result of government enforcement, private contribution claims or private personal injury or property damage claims) for known or unknown liabilities at (or caused by migrations from or hazardous waste shipped from) any of our current or former facilities or properties, including those owned or operated by our predecessors or third parties or at third party disposal sites. In addition, lawsuits by employees, customers, suppliers and other private parties may be costly to defend and could lead to judgments for damages.

Currently, eleven of the 50 U.S. National Pollutant Discharge Elimination System (NPDES) permits for our Bluestone operations are pending renewal with the U.S. Environmental Protection Agency. These permits have been administratively extended for a period of six months and currently Bluestone is not prevented from mining coal. However, should these permits remain unrenewed after the six-month period expires in 2011, there is a significant risk that such permits will be withdrawn and production at some of the Bluestone operations may be suspended for an indefinite period of time.

Table of Contents

Changes in U.S. regulations and the passage of new legislation in the United States could materially adversely affect the Bluestone companies' operations, increase our costs or limit our ability to produce and sell coal in the United States.

New legislation, regulations and rules adopted or implemented in the future (or changes in interpretations of existing laws and regulations) may materially adversely affect our U.S. operations. Some U.S. commentators expect that the current U.S. administration could implement policies or sponsor legislation that will make the production and/or consumption of coal in the United States more expensive and create additional regulatory burdens, and it remains unclear whether this will affect the business and prospects of the Bluestone companies. In particular, future regulation of greenhouse gases in the United States could occur pursuant to future treaty obligations, statutory or regulatory changes under the U.S. Clean Air Act, federal or state adoption of a greenhouse gas regulatory scheme, or otherwise. The U.S. Congress has recently considered, and there are pending, various proposals to reduce greenhouse gas emissions, and EPA recently issued several proposed determinations and rulemakings relating to greenhouse gas emissions from various sources. In the absence of federal legislation, many states and regions have undertaken greenhouse gas initiatives.

In addition, partly in response to regulatory turmoil created by EPA's involvement in the U.S. Clean Water Act 404 and NPDES permitting programs, in August 2010, the West Virginia Department of Environmental Protection (**WVDEP**) issued its Permitting Guidance for Surface Coal Mining Operations to Protect West Virginia's Narrative Water Quality Standards (**WVDEP Narrative WQS Implementation Guidance**). The basic narrative water quality standard that this Guidance seeks to implement requires that no significant adverse impact to the chemical, physical, hydrologic, or biological components of aquatic ecosystems shall be allowed. The WVDEP Narrative WQS Implementation Guidance sets forth detailed, lengthy procedures for determining whether a proposed NPDES discharge has a reasonable potential to cause a violation of this narrative standard, and if so, the permit conditions that should be imposed to assure that no such violations occur.

These and other potential U.S. federal, state and regional climate change rules will likely require additional controls on coal-fueled power plants, industrial boilers and manufacturing operations, and may even cause some users of coal to switch from coal to a lower carbon fuel. There can be no assurance at this time that a carbon dioxide cap-and-trade program, a carbon tax or other regulatory regime, if implemented, will not affect the future market for coal in the regions where we operate and reduce the demand for coal.

Furthermore, surface and underground mining are subject to increasing regulation, including pursuant to the federal MINER Act, blast survey and monitoring restrictions, and requirements by the Corps and the U.S. Department of Interior's Office of Surface Mining, which may require us to incur additional costs. Recent underground mining accidents in the United States, culminating in a mine explosion in West Virginia that killed 29 miners in April 2010, have resulted in calls by government officials for the U.S. Mine Safety and Health Administration to intensify its oversight and enforcement of mine safety, and to impose increasingly punitive measures against mining companies that violate mine safety laws, including, where necessary, closure of dangerous mines. Increased oversight, enforcement and regulation of mine safety could cause us to incur increased compliance costs, some of which could be material.

We must obtain, maintain and comply with numerous U.S. governmental permits and approvals for our operations in the United States, which can be costly and time consuming, and our failure to obtain, renew or comply with necessary permits and approvals could negatively impact our business.

Numerous governmental permits and approvals are required for our U.S. coal mining operations. Many of our permits are subject to renewal from time to time, and renewed permits may contain more restrictive conditions than existing permits. In addition, violations of our permits may occur from time to time, permits we need may not be issued or, if

issued, may not be issued in a timely fashion.

Table of Contents

We may be subject to significant mine reclamation and closure obligations with respect to our U.S. coal mining operations.

The U.S. Surface Mining Control and Reclamation Act (**SMCRA**) and counterpart state rules establish operational, reclamation and closure standards for all aspects of surface mining in the United States, as well as many aspects of underground mining. Our estimated reclamation and mine closure obligations could change significantly if actual amounts (which are dependent on a number of variables, including estimated future retirement costs, estimated proven reserves and assumptions involving profit margins, inflation rates and interest rates) differ significantly from our assumptions, which could have a material adverse effect on our business, financial condition, results of operations and prospects.

Extensive environmental regulation in the United States, including the Clean Air Act and similar state and local laws, affect our U.S. customers and could reduce the demand for coal as a fuel source and cause our sales to decline.

The U.S. Clean Air Act and similar state and local laws extensively regulate the amount of sulfur dioxide, particulate matter, nitrogen oxides, mercury and other compounds that are emitted into the air from power plants and other sources. Stricter regulation of such emissions could increase the cost of using coal in the United States, reducing demand and make it a less attractive fuel alternative for future planning.

For example, in order to meet the Clean Air Act limits on sulfur dioxide emissions from power plants, coal users may need to install scrubbers, use sulfur dioxide emission allowances (some of which they may purchase), blend high sulfur coal with low sulfur coal or switch to other fuels. Some of EPA's initiatives to reduce sulfur dioxide, nitrous oxide and mercury emissions have been the subject of litigation in recent years, and EPA continues to address issues raised in court opinions. In addition, several electric utilities have been sued by the government for alleged violations of the Clean Air Act and have faced suits by environmental groups during the initial permitting process for new coal-fired power plants, which has had a chilling effect on the construction of such plants. Both of these activities could adversely impact the demand for coal.

To the extent compliance with these laws and regulations and any new or proposed requirements affect our customers in the United States, an important market for the Bluestone companies, this could materially adversely affect our business, financial condition, results of operations and prospects.

Mining in the Northern and Central Appalachian region of the United States is more complex and involves more regulatory constraints than in other U.S. geographic areas.

The geological characteristics of Northern and Central Appalachian coal reserves, such as depth of overburden and coal seam thickness, make them complex and costly to mine. As such mines become depleted, replacement reserves may not be available when required or, if available, may not be capable of being mined at costs comparable to those characteristic of the depleting mines. In addition, as compared to mines in other areas such as in the western United States, permitting, licensing and other environmental and regulatory requirements are more costly and time consuming to satisfy. These factors could materially adversely affect the mining operations and cost structures of, and customers ability to use coal produced by, operators in Northern and Central Appalachia, including our Bluestone companies.

Item 4. Information on the Company

Overview

We are a vertically integrated group with revenues of \$9.7 billion in 2010, \$5.8 billion in 2009 and \$10.0 billion in 2008, with operations organized into four industrial segments: mining, steel, ferroalloys and power, each of which has

a managing company set up to perform the functions of respective executive management bodies of the companies within the segment, as described below.

Our mining segment produces metallurgical and steam coal, as well as iron ore and iron ore concentrate, limestone and coke. The segment consists of coal and iron ore mines in Russia and the U.S. Our subsidiary Southern Kuzbass Coal Company and its subsidiaries operate coal mines located in the Kuznetsky basin, near Mezhdurechensk in southwestern Siberia. These mines include four open pit mines and three underground

Table of Contents

mines. Our subsidiary Yakutugol operates coal mines located in the Sakha Republic in eastern Siberia, consisting of two open pit mines and one underground mine. Yakutugol also holds the license to mine the undeveloped Elga coal deposit, which we plan to mine using the open pit method after the completion of the construction of a private rail branch line of approximately 315 kilometers in length, which will connect the Elga coal deposit to the Baikal-Amur Mainline. Our Bluestone subsidiaries operate four mining complexes in West Virginia, United States, consisting of open pit and underground mines.

We also provide coal washing services, both to our coal-mining subsidiaries and to third parties; according to Rosinformugol, a Russian coal industry information agency, at the end of 2010 we controlled 19.2% of Russia's coking coal washing capacity.

Our subsidiary Korshunov Mining Plant operates three open pit iron ore mines: Korshunovsk, Rudnogorsk and Tatianinsk. These mines are located near Zheleznogorsk-Ilimsky, a town in the Irkutsk region in central Siberia.

We also produce significant amounts of coke, both for internal use and for sales to third parties. We have the flexibility to supply our own steel mills with our mining products or to sell such mining products to third parties, depending on price differentials between local suppliers and foreign and domestic customers. In the second quarter of 2010, with the aim of further optimizing the structure of our group, we transferred our coke producing subsidiaries Moscow Coke and Gas Plant and Mechel-Coke from our steel segment to the mining segment.

In April 2008, we established Mechel Mining, a wholly-owned subsidiary in which we consolidated the coal and iron ore assets of our mining segment (Southern Kuzbass Coal Company, Korshunov Mining Plant, Yakutugol, Bluestone and other companies).

Mechel Mining Management as a wholly-owned subsidiary of Mechel Mining acts as the executive body of the majority of our subsidiaries in the mining segment.

Our steel segment produces and sells semi-finished steel products, carbon and specialty long products, carbon and stainless flat products and value-added downstream metal products including wire products, stampings and forgings.

Our steel production facilities in Russia include two integrated steel mills, a wire products plant, and forging and stamping mills in the southern Ural Mountains, a wire products plant in northwestern Russia near the border with Finland. Outside of Russia, our steel facilities are in the European Union, including a wire products plant in Lithuania and five steel mills in Romania.

Mechel-Steel Management as a wholly-owned subsidiary of Mechel OAO acts as the executive body of our main subsidiaries in the steel segment.

Our steel segment also includes our distribution network in Russia and abroad, which consists of Mechel Service Global, and its subsidiaries in Russia, Europe, Kazakhstan and Turkey.

Our ferroalloys segment produces and sells low-ferrous ferronickel, ferrochrome and ferrosilicon. We have owned the Southern Urals Nickel Plant (a nickel mining and production operation) since 2001. We acquired Bratsk Ferroalloys Plant (a ferrosilicon producer) in 2007. In April 2008, we completed the acquisition of 99.3% of Oriol Resources from its shareholders in a public offer conducted under the U.K. Takeover Code. The assets acquired with Oriol Resources included Tikhvin Ferroalloy Plant, a ferrochrome producer located near St. Petersburg, as well as the Voskhod chrome and Shevchenko nickel projects in Kazakhstan. The acquisition of Oriol Resources was a key milestone in the development of our ferroalloys segment. The activities of this segment are aimed at increasing the efficiency of our steel segment by supplying raw materials (ferroalloys) to the steel segment for specialty and stainless steel production.

In October 2008, we completed the consolidation of our ferroalloy assets in Oriel Resources. Oriel Resources now owns a 100% interest in Bratsk Ferroalloys Plant, an 84.06% interest in Southern Urals Nickel Plant, and holds through its subsidiaries a 100% interest in Tikhvin Ferroalloy Plant and licenses for the Voskhod chrome and the Shevchenko nickel deposits in Kazakhstan. Southern Urals Nickel Plant produces nickel in Orsk in the Orenburg region, in the southern part of Russia's Ural Mountains, and operates two open

Table of Contents

pit nickel ore mines, Sakhara and Buruktal. Mechel Ferroalloys Management acts as the executive body of the companies in our ferroalloys segment.

The power segment was formed in April 2007, when we acquired a controlling interest in Southern Kuzbass Power Plant, located in Kaltan, in the Kemerovo region, and it sells electricity and capacity to the wholesale market, as well as supplies electricity within our group. In June 2007, we acquired a controlling interest in Kuzbass Power Sales Company, the largest power distribution company in the Kemerovo region. In December 2007, we purchased a 49% stake in Toplofikatsia Rousse, a power plant located in Rousse, Bulgaria, which uses steam coal mined by our Southern Kuzbass Coal Company and we increased our stake in Toplofikatsia Rousse to 100% in December 2010. Our power segment enables us to market higher value-added products made from our steam coal, such as electricity and heat energy, and increase the electric power self-sufficiency of our mining and steel segments. Mechel-Energo acts as the executive body of Southern Kuzbass Power Plant and Kuzbass Power Sales Company in our power segment.

Our group includes a number of logistical and marketing companies that help us to deliver and market our mining products, raw steel, manufactured steel goods and ferroalloy products. We have freight seaports in Russia on the Sea of Japan (Port Posiet) and on the Sea of Azov (Port Temryuk) and a freight river port on the Kama River, a tributary of the Volga River in central Russia (Port Kambarka). We have a freight railcar pool, and we have begun building a private rail branch line to access our Elga coal deposit in Yakutia. In 2009 we started to build up our own truck fleet.

We have a network of overseas subsidiaries, branches, warehouses, service centers and agents to market our products internationally, and we have a Russian domestic steel retail and service subsidiary with 47 regional offices.

Mechel OAO is an open joint-stock company incorporated under the laws of the Russian Federation. From the date of our incorporation on March 19, 2003 until August 19, 2005, our corporate name was Mechel Steel Group OAO. We conduct our business through a number of subsidiaries. We are registered with the Federal Tax Service of the Russian Federation under main state registration number (OGRN) 1037703012896. Our principal executive offices are located at Krasnoarmeyskaya Street, 1, Moscow 125993, Russian Federation. Our telephone number is +7 495 221 8888. Our Internet addresses are www.mechel.com and www.mechel.ru. Information posted on our website is not a part of this document. We have appointed CT Corporation System, 111 Eighth Avenue, New York, New York 10011 as our authorized agent upon which process may be served for any suit or proceeding arising out of or relating to our shares and ADSs or the ADS deposit agreements.

Table of Contents

Table of Contents

Competitive Strengths

Our main competitive strengths are the following:

Leading mining and metals group by production volume with strong positions in key businesses

We are a leading coking coal producer and international coking coal exporter by volume in Russia.

According to AME Mineral Economics (Hong Kong) Limited (**AME**) we were the sixth largest metallurgical coal producer and the eighth largest metallurgical coal exporter in the world in 2010.

In 2010, we were the largest coking coal producer in Russia with a 22.2% market share in the coking coal market in Russia by production volume, according to the Central Dispatching Department, a Russian information agency reporting on the fuel and energy industry. We were also Russia's largest hard-coking coal producer with a 69.0% market share in 2010, according to the Central Dispatching Department. In 2010, our export sales of coking coal were the largest by volume among Russian companies, according to RasMin OOO (**RasMin**), a private information and research company focusing on the coal-mining industry. According to Rosinformugol, we also control 19.2% of Russia's coking coal washing capacity by volume.

We have large coking coal reserves base in Russia and a full-range offering of high-quality coal for blast furnace steel producers.

Our total coking coal reserves, accounted as per the SEC Industry Guide 7, in Russia amounted to 688.3 million tonnes as of December 31, 2010.

Our coal reserves allow us to supply steel producers and coke makers globally with a full range of coal grades to make quality metallurgical coke or to use in PCI-assisted and sintering-assisted steel manufacturing. In particular, Southern Kuzbass Coal Company produces semi-hard and semi-soft coking coal concentrates and PCI and anthracite (fine and sized) grades of coal. Most of the coking coal grades of Southern Kuzbass Coal Company are sold in Russia, while PCI and anthracite grades of coal are exported. Yakutugol produces low volatile hard coking coal concentrate grade used by customers both in Ukraine and in the Asia-Pacific region, while our Bluestone coal assets produce low, medium and high volatile hard coking coal concentrate grades used predominantly by customers in the United States, Europe, Asia-Pacific region and South America. The ability to serve our customers throughout the world with a broad range of metallurgical coal grades gives us a competitive advantage in winning new sales markets and establishing long-term relationship with the customers.

By volume we are Russia's second largest producer of specialty steel and long steel products and Russia's largest producer of wire products.

According to Metal Expert, a source for global and steel and raw materials market news, in 2010, we were Russia's second largest producer of long steel products (excluding square billets) by production volume, second largest producer of reinforcement bars (rebar), largest producer of wire rod and the largest producer of wire products. Our long steel products business has particularly benefited from the increased infrastructure and construction activity in Russia over the last 10 years. Our share of Russia's total production volume of rebar in 2010 was approximately 27.8%, according to Metal Expert. According to Metal Expert and Chermet, a Russian ferrous metals industry association (**Chermet**), we are Russia's second largest producer of specialty steel by production volume, accounting for 26.9% of Russia's total specialty steel output in 2010. Our product range in specialty steel is broader and more comprehensive than other Russian producers, giving us an added advantage in our markets. According to Prommetiz, we are Russia's largest producer of wire products by production volume, accounting for 36.5% of Russia's total wire

products output in 2010. Our product range in wire products is broader than other Russian producers and allows to cover all needs of customers, giving us an added advantage in our markets.

Table of Contents

High degree of vertical integration

Our steel segment is able to source almost all its raw materials from our group companies, which provides a hedge against supply interruptions and market volatility.

We believe that our internal supplies of coking coal, iron ore and ferroalloys give us significant advantages over other steel producers, such as higher stability of operations, better quality control of end products, reduced production costs, improved flexibility and planning latitude in the production of our steel and value-added steel products and the ability to respond quickly to market demands and cycles. We are capable of being fully self-sufficient with respect to coke, 81% self-sufficient with respect to ferroalloys (FeSi, FeNi, FeCr), and 8.6% self-sufficient with respect to iron ore concentrate. Steam coal is not used in steel production. We believe that the level of our self-sufficiency in raw materials gives our steel business a significant competitive advantage.

In 2010, we internally sourced 62% of the nickel, 99% of the ferrosilicon and 67% of the ferrochrome requirements of our steel segment. In 2010, we satisfied approximately 27% of our electricity needs internally.

We view our ability to source our inputs internally not only as a hedge against potential supply interruptions, but as a hedge against market volatility. From an operational perspective, since our mining, ferroalloys and power assets produce the same type of inputs that our manufacturing facilities use, we are less dependent on third-party vendors and less susceptible to supply bottlenecks. From a financial perspective, this also means that if the market prices of our steel segment's inputs rise, putting pressure on steel segment margins, the margins of our mining, ferroalloys and power segments will tend to increase. Similarly, while decreases in commodities prices tend to reduce revenues in the mining and ferroalloys industry, they also create an opportunity for increased margins in our steel business.

Having the ability to internally source our materials also gives us better market insight when we negotiate with our outside suppliers and improves our ability to manage our raw material costs.

Our logistics capability allows us to better manage infrastructure bottlenecks, to market our products to a broader range of customers and to reduce our reliance on trade intermediaries.

We are committed to maximum efficiency in delivering goods to consumers and have been actively developing our own logistics network. Using our own transportation capacity enables us to save costs as we are less exposed to market fluctuations in transportation prices and are able to establish flexible delivery schedules that are convenient for our customers. Our logistics capacities are currently comprised of two sea ports and a river port, as well as a transport operations company, Mecheltrans, which manages the rail transportation of our products and carries out the overall coordination of our sea and rail transportation logistics for our products. Mecheltrans not only transports our products but also provides transportation services to third parties.

We own two seaports and a river port and we have our own rail rolling stock. Port Posiet in Russia's Far East, on the Sea of Japan, allows us easy access to the Asia-Pacific seaborne markets and provides a delivery terminal for the coal mined by our subsidiary Yakutugol in Yakutia. We are in the process of upgrading Port Posiet, which upon completion in the second half of 2012 will enable us to expand the cargo-handling capacity of the port up to 7.0-9.0 million tonnes per year and to accommodate Panamax ships, which will increase its attractiveness and utility as an export port for large volumes of coal. Port Kambarka, on the Kama River in the Udmurt Republic (a Russian administrative region also known as Udmurtia) is connected to the Volga River basin and the Caspian Sea, and is connected by canal to the Don River and the Baltic Sea. Port Temryuk on the Sea of Azov, an inlet of the Black Sea basin, is primarily used for coal and metal transshipment and provides us access to the fast-growing economies of the Black Sea basin and beyond. We are also preparing a feasibility study for construction of a specialized coal transshipment seaport at Vanino in Russia's Far East with a capacity of up to 25.0 million tonnes per year.

As of December 31, 2010, our subsidiary Mecheltrans owned and leased more than 4,642 rail freight cars that we use to ship our products. On June 23, 2008, pursuant to the terms of our license to mine the Elga coal deposit we began construction on a private rail branch line, which we will own and control subject to applicable regulation. This rail branch line will connect the Elga coal deposit to Ulak Station on the

Table of Contents

Baikal-Amur Mainline, which in turn connects to the Transsiberian Railway, serving European Russia west of the Ural Mountains and eastward to the Pacific Ocean. We anticipate that the Elga rail branch line will not only provide an avenue for delivery of coal produced at the Elga coal deposit, but will eventually serve as the primary transportation corridor for coal, iron ore and other raw materials mined in nearby deposits. The rail branch line will be approximately 315 kilometers long. We need to complete construction of 60 kilometers of railway embedded in 2000-2003 by the Russian Railways, to construct 250 kilometers of new railway and construct 77 railway bridges. As of January 1, 2011, we have built the railway until the 124th kilometer point, constructed 33 railway bridges and commenced construction of another 18 railway bridges, as well as completed construction of an access road to the Elga deposit. In August 2010, we reallocated our mining machinery and commenced overburden mining and construction of capital mining facilities and buildings at the Elga coal deposit.

In 2009, Mechel-Service, a Russian subsidiary of Mechel Service Global, started to form its own truck fleet for metal products delivery to our clients. In 2010, we acquired new trucks for our offices in Ufa, Krasnodar, Tyumen, Kazan, Nizhny Novgorod and Samara. We also continue to renew our truck fleet in Germany. In 2010, we have launched a project on acquisition of truck vehicles in Romania.

One of the lowest-cost metallurgical coal producers worldwide

According to AME, our Russian metallurgical coal operations are in the first and second quartiles of the global cash cost curve. Approximately 78.7% of our coking coal production is mined from open pit mines, which we believe is a greater percentage than any of our major Russian competitors. Open pit mining is generally considered safer, cheaper and faster than the underground method of coal mining. Most of our mines and processing facilities have long and established operating histories. We view strict cost management and increases in productivity as fundamental aspects of our day-to-day operations, and continually reassess and improve the efficiency of our mining operations.

Strategically positioned to supply key growth markets

Our mining and logistical assets are well-positioned to expand sales to both Atlantic and Asia-Pacific seaborne markets.

Our eastern Siberian coal mines of Yakutugol and its undeveloped Elga coal deposit are strategically located and will enable us to expand exports of our products to key Asian markets. Yakutugol is located within the shortest distance among Russian coking coal producers to Port Posiet in the Russian Far East. We view the proximity of our mining and logistical assets to key fast-growing economies as a key competitive advantage which allows us to diversify our sales, provides us with additional growth opportunities and acts as a hedge in the event of a decrease in demand from customers in Russia. Moreover, due to our integration, experience and location in Russia, which has some of the largest deposits of coal and iron ore in the world, we are better positioned than many of our international competitors to secure future production growth.

Our West Virginia coal-mining operations, carried out through the Bluestone companies, are situated in West Virginia, just 400 miles from the deep-water port in Norfolk, Virginia and in relative proximity to Baltimore and New Orleans. Historically the Bluestone companies' key markets have been in North America, and in the last two years, they have expanded their sales to Asia and Europe. In 2010, we further expanded the geography of the Bluestone companies' sales by using our existing international distribution channels to Asia. Due to certain restrictions under the Clean Water Act regulation, we plan to maintain current production volumes and to focus on cost control. For more information on the Clean Water Act see U.S. Environmental, Health, Safety and Related Regulation.

Our steel mills are well-positioned to supply Russian infrastructure projects.

Russia is our core steel market and we have significant domestic market shares in all our key specialty steel and rolled long product lines. We believe we have established a strong reputation and brand image for Mechel within Russia, just as we have with our international customers. The location of a number of our core steel segment assets in the southern Urals positions us advantageously, from a geographical and logistical

Table of Contents

perspective, to serve the areas in Russia west of the Urals where Russia's construction industry is most active. The construction industry was a major source of our revenue and we have captured a large portion of the market. According to Metal Expert, our share of Russia's total production volume of construction rebar in 2010 was approximately 27.8%.

Established distribution and sales platform

Our Mechel Service Global distribution platform in Russia has 71 storage sites in 46 cities throughout Russia to serve a broad range of end customers. Fourteen of these facilities provide a number of value added services to our customers including bending and cutting of rebars, cutting and uncoiling of steel ropes, production of wire mesh, and cutting of sheet steel. Retail sites with a set of service equipment for simple processing of rolled metal products have been organized in 10 offices, which allows us to improve service quality for small companies and individuals, as well as to obtain additional margins. At our production facilities in the Samara region a project for production of welded corrugated beams and constructions for easy set buildings was launched. In 2011, we are planning to continue developing these areas. In Europe, we actively develop sales of metal products through Mechel Service Global's subsidiaries in eleven European countries. Two of these subsidiaries provide services for deep processing of rolled metal products including mechanic, gas, plasma, laser and water cutting, and welding, bending, and the production of welded mesh and frames. In 2010, we have launched new service centers for processing of high-quality rolled steel products. Currently, we have in total 126 storage sites and service centers in CIS and Europe, servicing more than 20,000 customers.

Our direct access to end customers through the provision of value-added services allow us to obtain real-time market intelligence, improve production planning at our steel facilities, sell more high-margin, value-added products by addressing specific customer needs and further diversify our customer base. Until recently we were Russia's only integrated steel producer with its own developed distribution network.

Mechel Service Global sales accounted for 36.1% of our steel segment sales and 20.7% of our total sales in 2010. More than 95% of Mechel Service Global sales was sold domestically. Sales to companies within the group accounted for 3.1% of the total sales of Mechel Service Global in 2010.

We also have a non-retail sales and distribution network represented by our Swiss subsidiaries Mechel Trading AG and Mechel Carbon AG with offices in four countries and agents in five additional countries. This network facilitated sales constituting 33.9% of our total sales in 2010, reducing our reliance on the Russian market in the event that it experiences another downturn.

Track record of acquisitions

Building upon our success in turning around the coal operations of Southern Kuzbass Coal Company in the late 1990s and following our acquisition and revitalization of the Chelyabinsk Metallurgical Plant, in the last few years we have acquired other metal finishing and wire products manufacturing operations, as well as mining, power and ferroalloys operations. As we have acquired and integrated companies that are closer to the end-customers and produce higher-value-added products, the nature of our group has transformed steadily from primarily a raw materials processor to a vertically integrated, logistically coherent mining, steel, ferroalloys and power group. Since the acquisition of Chelyabinsk Metallurgical Plant we have executed over 25 acquisitions in the mining, steel, power, ferroalloys, distribution and logistic segments.

Our successful track record of identifying, acquiring and integrating target companies that complement our group is due in part to our clearly defined investment criteria, prudent approval procedures and our time-tested ability to identify synergies in target assets that can be quickly implemented while at the same time moving forward with our

longer-term strategic goals. Our acquisition program evaluates potential targets to determine whether they conform to our long-term strategy to shift our product mix up the value chain, expand our mining asset base, expand into new markets and strengthen our position in existing markets and reduce costs through improved management and intra-group synergies. With each of our acquisitions, we aim to implement improved operational and management practices. We also analyze each acquisition to determine the minimum capital expenditures necessary to achieve our target increases in productivity and efficiency, both on

Table of Contents

a per-asset and group-wide basis. We also devote the management, technological and logistical resources necessary to integrate new acquisitions into all aspects of our business, including the supply of raw materials and steel, industrial production and sales and distribution. We have a track record of using existing workforces and maintaining strong relations with the local communities where we operate following our acquisitions.

The acquisition of Bluestone companies in the United States in May 2009 was Mechel's first experience of acquiring and integrating companies outside Eurasia. The strategic reasons for this acquisition include establishing our coal business on a worldwide level, diversifying our customer base and sales geography and improving the quality and breadth of our offering of coking coal products. With the acquisition of Bluestone, we are now able to supply our customers worldwide with a wider range of coking coal grades.

Strong and focused management team

Our current management team has significant experience in all aspects of our businesses. Mr. Zyuzin, one of the founders of our group and our controlling shareholder, is our Chairman. Mr. Zuyzin has led our successful transformation from a small coal trading operation to a large integrated metals and mining group. Mr. Zyuzin has over 24 years of experience in the coal mining industry and has a doctorate in coal mining technical sciences. Our divisional management also has long-tenured experience in the mining and metals industry. See Directors and Executive Officers.

Business Strategy

Our goal is to become one of the largest mining and metals companies globally. The key elements of our strategy include the following:

Enhancing our position as a leading mining, metals and ferroalloys group

We plan to develop our existing reserves base.

We intend to build on our substantial mining experience by developing our existing coal and iron ore reserves, particularly in order to sell more high-quality coking coal and iron ore concentrate to third parties. We currently plan to increase our annual coal production from 28.0 million tonnes in 2010 to 39.8 million tonnes in 2013, and maintain our iron ore concentrate production at the level of at least five million tonnes, with a potential increase in iron ore production of up to 10-12% by 2013 resulting from upgrades at the Korshunov Mining Plant. See Capital Investment Program. We intend to expand the production of the Voskhod chrome ore deposit to 1.3 million tonnes per year and to start the exploration of nickel ores at the Shevchenko deposit in Kazakhstan. We plan to further develop our ferroalloy production at Bratsk Ferroalloy Plant through mining quartzite, a raw material for ferrosilicon production, at the Uvatskoye deposit in the Irkutsk region.

We intend to develop the coking and steam coal reserves of Yakutugol. Yakutugol, which has three producing mines as well as two licenses for the undeveloped Elga coal deposit and the Piatimetrovy and Promezhutochny II coal seams, holds mining rights to reserves that we believe will solidify our position as a leading global producer of coking coal for the future. We intend to seek additional mining licenses through acquisitions and/or participation in auctions and tenders in view of our strategic plans and market dynamics. In particular, we believe that obtaining additional mining rights near the Elga coal deposit would allow us to realize more fully the benefits of the private rail branch line we are constructing to deliver Elga's future coal production to the market.

We intend to increase our group's output of high-value-added steel products and continue to optimize our product mix with a view to increase steel margins.

We plan to continue our strategy of selectively investing in technology and equipment modernization, including expanding the use of continuous casters (concasters) in our steel manufacturing facilities, optimizing our product catalog and cutting production costs with a view to increase steel margins.

Our ongoing plant modernization program is aimed at maintaining capacity at the present level, increasing efficiency and reducing the environmental impact of our operations. In line with this strategy, in 2008 through 2010 we completed modernization of production facilities at Chelyabinsk Metallurgical Plant,

Table of Contents

Izhstal and Urals Stampings Plant. In continuation of this strategy in 2011 and beyond, we aim to complete projects to construct the universal rail and structural rolling mill and reconstruct the oxygen-converter shop at Chelyabinsk Metallurgical Plant, modernize rolling mill No. 250 at Izhstal and commission additional facilities at Urals Stampings Plant. See Capital Investment Program.

We intend to continue to seek out acquisition and expansion opportunities and realize the maximum potential from our completed acquisitions.

Our strategy involves finding acquisition and expansion opportunities that we believe will reinforce or complement our existing business lines. We actively monitor global mining, steel and ferroalloys markets for new opportunities.

After the financial and commodities markets stabilize we will continue to seek out opportunities to expand our group through acquisitions, including by obtaining new subsoil licenses in Russia and abroad. In doing so, we will seek to maintain and expand our presence in regions with low costs and high economic growth potential. We intend to continue to selectively acquire value-added downstream businesses such as wire products, stampings and forgings producers to help us reach our customer base, including in new markets. This downstream integration:

is a logical extension of our specialty and low-carbon long product lines, representing a higher-margin, next value-added step for products that we already manufacture;

provides access to a market less cyclical than the upstream market, reducing our exposure to market downturns and commodity price fluctuations; and

moves us closer to our final customers, enabling us to better understand customer needs, influence buyer behavior and respond quickly to change.

Maintaining a high degree of vertical integration

We intend to maintain the flexibility to source our inputs internally as circumstances require.

The expansion of our ferroalloy mining, processing and manufacturing capacity, with the acquisition of Bratsk Ferroalloy Plant (which produces ferrosilicon used in all steel manufacturing) and the Oriel Resources assets (which mines and processes ferroalloys used to make steel), is consistent with our strategy of maintaining the potential to source our raw material requirements for manufacturing higher value-added steel products. We have expanded our power generation and distribution business, and we see expansion of our power capabilities not only as a diversification measure and a way to market another value-added product made from our coal, but also as a way to have more control over our energy efficiency and hedge against increases in the price of the electricity which is used by our facilities. However, even as we expand and develop our internal sourcing capability, we intend to adhere to our longstanding approach of purchasing inputs from third-party suppliers and selling products, including raw materials, to domestic and international customers in a way that we believe creates the most advantageous profit opportunities for our group. The Bluestone acquisition enlarges our coking coal portfolio, adding high quality hard coking coal with low ash content. This allows us more flexibility to not only serve our coking coal customers, but also to use these grades internally in our coke production, if needed because of market conditions.

We plan to expand our logistical capabilities.

We intend to selectively expand our logistics capabilities. We have engaged project engineers to carry out works on the design and construction of the Elga rail branch line and of the Port Vanino complex. We plan to expand our own fleet of railcars, balancing transportation security and cost efficiencies. We plan to improve logistics in Europe

through the establishment of the company Mecheltrans West, which will carry out transportation of Mechel's cargos via motor and rail transport, as well as work out optimal logistic schemes of cargo delivery.

Table of Contents

We will leverage synergies among our core businesses.

In addition to synergies derived from our status as an integrated group, we believe that additional cost savings and opportunities will arise as we benefit from economies of scale and continue to integrate recent acquisitions, in particular by implementing improvements in working practices and operational methods. We regularly evaluate the manner in which our subsidiaries source their raw material needs and transfer products within the group in order to operate in the most efficient way, and we expect to identify and take advantage of further synergies among our core businesses.

Continuing expansion in high-growth markets

We plan to increase metallurgical coal sales to high-growth international markets.

We intend to continue to capitalize on our ability to serve fast-growing Asian and other international markets by leveraging our growth in production and favorable geographic location of our coal producing and logistics assets. In particular we view Japan, China, South Korea and India as countries to which our international growth strategy will be applied. We further plan to expand production at our Bluestone operations to export coking coal to fast-growing South American markets including Brazil.

Further develop our domestic and European distribution capabilities

Our continued focus on the domestic Russian market is a key element of our strategy. We are particularly well-positioned to supply construction and infrastructure projects in Russia from our Chelyabinsk Metallurgical Plant located in the southern Urals and our Beloretsk Metallurgical Plant in Bashkortostan. The geographical reach of our Mechel Service Global production and logistics facilities and sales network provides us with a strong platform to grow our sales. Before the financial crisis, Mechel Service Global's operations in Europe were limited to Germany, Romania and Belgium. In 2009 Mechel Service Global expanded its distribution network to the Netherlands, Serbia, Bulgaria and Italy. In 2010 we established subsidiaries in the UK, France and Hungary and acquired companies in the Netherlands, the Czech Republic and Turkey. We plan to further expand our Mechel Service Global network.

Our History and Development

We trace our beginnings to a small coal trading operation in Mezhdurechensk in the southwestern part of Siberia in the early 1990s. See Item 5. Operating and Financial Review and Prospects History of Incorporation. Since that time, through strategic acquisitions in Russia and abroad, Mechel has developed into a large, integrated mining, steel, ferroalloys and power group, comprising coal, iron ore, coke, steel, nickel, ferrochrome, ferrosilicon and limestone production, with operations and assets in Russia, Romania, Bulgaria, Lithuania, Kazakhstan and the United States. With each of our acquisitions, we implement operational and management practices. We also devote the management, technological and logistical resources necessary to integrate new acquisitions into all aspects of our business, including the supply of raw materials and steel, production methodologies and sales and distribution.

After the recent restructuring of our assets into separate mining, steel, ferroalloys and power segments, we have been implementing management, reporting and control systems for each respective subsidiary holding company, allowing for the preparation of consolidated financial statements for each of them.

We intend to retain a controlling voting interest in each of our subsidiary holding companies as we continue to build upon our business model of vertical integration among our assets. See Risk Factors Risks Relating to Our Business and Industry If shares of our subsidiary holding companies are listed on a stock exchange, it could entail changes in

such companies' management and corporate governance that might affect our integrated business model.

Mining Segment

Our mining segment produces coking coal and other types of metallurgical coal (anthracite and coal for pulverized, or finely crushed, coal injection (PCI)), steam coal, coking coal and steam coal concentrates, as well as iron ore, iron ore concentrate, limestone and coke. Our coal operations consist of Southern Kuzbass Coal Company, Yakutugol and Bluestone, which together produced 18.5 million tonnes of coking coal and 9.5 million tonnes of steam coal in 2010. Our coke operations consist of Moscow Coke and Gas Plant and

Table of Contents

Mechel-Coke, which together produced 3.9 million tonnes of coke in 2010. Our iron ore operations consist of Korshunov Mining Plant which produced 11.1 million tonnes of iron ore and 4.2 million tonnes of iron ore concentrate in 2010. Our limestone operations consist of Pugachev limestone quarry which produced 1.9 million tonnes of limestone in 2010.

Description of key products

Coking coal and metallurgical coal. Southern Kuzbass Coal Company produces high rank bituminous coal, which is washed to reduce the ash content. The premier product is a good quality, low phosphorous, low sulphur semi-soft to semi-hard coking coal used to produce coke for the iron and steel industry. Other products produced by Southern Kuzbass Coal Company include PCI coal and anthracite. Yakutugol produces hard coking coal of low volatile content. Our West Virginia-based Bluestone operations produce a range of metallurgical coals including low, medium and high volatile hard coking coal. The Bluestone mines blend low, medium and high volatility hard coking coal in different proportions to meet the requirements of their customers. The final products are blended at the port, as they are loaded on to the customer's vessels.

Steam coal. We produce both raw and washed steam coal products for use in the power generation industry. Southern Kuzbass Coal Company, Yakutugol and our Bluestone operations produce higher energy steam coal as part of their product mix.

Coke. Coke is used in the blast furnace as a main source of heat, a reducing agent for iron and a raising agent for charging material in the smelting process. It is a product prepared by pyrolysis (heating in the absence of oxygen) of low-ash, low-phosphorus and low-sulfur coal charging material. We offer customers coke from our Moscow Coke and Gas Plant and Mechel-Coke.

Coking products. Coking products are hydrocarbon products obtained as a byproduct of the production of coke. We produce coke in our subsidiaries Moscow Coke and Gas Plant and Mechel-Coke. We offer our customers coal tar, naphthalene and other compounds. Worldwide, coal tar is used in diverse applications, including boiler fuel, food additives and pavement sealants. Naphthalene, a product of the distillation of coal tar, is best known as the active ingredient in mothballs. It is used by the chemical industry to produce chemical compounds used in synthetic dyes, solvents, plasticizers and other products.

Iron ore concentrate. From our Korshunov Mining Plant we offer iron ore concentrate with a standard iron fraction of 62%.

Mining process

Coal. At our Russian and U.S. mines, coal is mined using open pit or underground mining methods. Following a drilling and blasting stage, a combination of shovels and draglines is used for moving coal and waste at our open pit mines. Production at the underground mines is predominantly from longwall mining, a form of underground coal mining where a long wall of coal in a seam is mined in a single slice. After mining, depending upon the amount of impurities in the coal, the coal is processed in a washing plant, where it is crushed and impurities are removed by gravity methods. Coking coal concentrate is then transported to coking plants for conversion to coke for use in pig iron smelting at steel plants. Steam coal is shipped to power utilities which use it in furnaces for steam generation to produce electricity. Among the key advantages of our mining business is the high quality of our coking coal, the low level of volatile matter in our steam coal and our modern coal washing facilities in Russia, primarily built during the 1970s and 1980s, including facilities built as recently as 2000-2002. Coal extracted at each of the Bluestone mining complexes is processed at the on-site coal preparation plants. Coal mined in Central Appalachia typically contains impurities such as rock, shale and clay and occurs in a wide range of particle sizes. The coal preparation plants treat

the coal to ensure a consistent quality and to enhance its suitability for particular end-users. Steam coal is not processed and is sold as is, as well as some high quality coking coal which does not need washing.

Iron ore. All three of our iron ore mines are conventional open pit operations. Following a drilling and blasting stage, ore is hauled by rail hopper cars to the concentrator plant. At the concentrator plant, the ore is crushed and ground to a fine particle size, then separated into an iron ore concentrate slurry and a waste stream using wet magnetic separators. The iron ore is upgraded to a concentrate that contains about 62.9% elemental iron. Tailings are pumped to a tailings dam facility located adjacent to the concentrating plant. The

Table of Contents

concentrate is sent to disk vacuum filters which remove the water from the concentrate to reduce the moisture level, enabling shipment to customers by rail during warmer months, but in colder periods the concentrate must be dried further to prevent freezing in the rail cars. Korshunov Mining Plant operates its own drying facility with a dry concentrate production capacity of up to 16,000 tonnes per day.

Limestone. Our limestone mining operation uses conventional open pit mining technology. Ore is drilled and blasted, then loaded with electric shovels into haul trucks. Relatively minor amounts of waste are hauled to external dumps. The ore is hauled to stockpiles located adjacent to the crushing and screening plant. Ore is crushed, screened and segregated by size fraction. The crushed limestone is separated into three product categories for sale: 0-20 millimeters, 20-40 millimeters and 40-80 millimeters.

Coal production

Our active Russian coal mines are primarily located in the Kuznetsky basin, a major Russian coal-producing region, and in the Sakha Republic in eastern Siberia. The earliest production at our Kuznetsky basin mines was in 1953, and 1979 in our Sakha Republic mines. The table below summarizes our coal production by mine and type of coal for the periods indicated.

Mine ⁽¹⁾	2010		2009		2008

Table of Contents

- (1) Underground denotes an underground mine; Open Pit denotes a surface mine.
- (2) Volumes are reported on a wet basis.
- (3) Production at the Lenin Underground Mine was negatively impacted in 2008 because of accidents: on May 30, 2008 there was a cave-in (suspension of operation for 17 calendar days) and on July 29, 2008 there was a methane flash (suspension of operation for 67 calendar days). Both accidents involved multiple casualties.
- (4) Includes only post-acquisition production volumes.

The coking coal produced by our Russian mines is predominately low-sulfur (0.3%) bituminous coal. Heating values for the coking coal range from 6,861 to 8,488 kcal/kg on a moisture- and ash-free basis. Heating values for the steam coal range from 6,627 to 8,286 kcal/kg on a moisture- and ash-free basis.

Our coking coal concentrate production amounted to 11.5 million tonnes in 2010 and 7.4 million tonnes in 2009.

We also produce other types of metallurgical coal such as anthracite concentrate and PCI coal. The table below summarizes our production of anthracite concentrate and PCI coal for the periods indicated.

	2010	2009	2008
	(In thousands of tonnes)		
Anthracite concentrate	1,087.3	687.0	702.1
PCI coal	905.0	11.5	

Russian Coal Mines

All of the Southern Kuzbass Coal Company mines are located in the southeast portion of the Kuznetsky Basin in the Kemerovo region, Russia. Southern Kuzbass Coal Company operations are located around Mezhdurechensk with the exception of Erunakovsk, which is located northeast of Novokuznetsk. Each of the Southern Kuzbass Coal Company mines, with the exception of Erunakovsk, have railway spurs connected to the Russian rail system, which is controlled by Russian Railways.

Nerungrinsk Open Pit is located in the southern part of the Sakha Republic in eastern Siberia, south of the capital of Yakutsk near the town of Nerungr. Nerungrinsk Open Pit has a railway spur connected to the Russian rail system, which is controlled by Russian Railways.

The Elga project is located in the Sakha Republic and lies in the South Yakutsk Basin of the Toko Coal-Bearing region. This region was first discovered and explored in 1952 with the first geological surveys being conducted in 1954 through 1956 followed by prospecting surveys in 1961 through 1962. Trenching along the outcrops was conducted in 1980 through 1982 followed by exploration drilling that was completed in 1998.

The table below sets forth certain information regarding the subsoil licenses used by our Russian coal mines.

License	Year
----------------	-------------

Mine⁽¹⁾	License Area	License-Holding Subsidiary	Expiry Date	Status⁽²⁾	Area (sq. km)	Production Commenced
Krasnogorsk Open Pit		Southern Kuzbass Coal Company				
	Tomsk, Sibirginsk	OAO	Dec 2013	In production	22.4	1954

(1) Underground denotes an underground mine. Open Pit denotes a surface mine.

(2) In production refers to sites that are currently producing coal. In development refers to sites where preliminary work is being carried out in accordance with the terms of the relevant subsoil license, such as preparation and approval of the geological survey project (for the Olzherassk license area), geological surveys (for the Olzherassk, Razvedochny, Erunakovsk-3, Piatimetrovy and Promezhutochny II coal seams license areas),

preparation and approval of construction project documentation (for the Elga license area) and construction (for the Erunakovsk-1 and Elga license areas).

(3) Not included in our mineral reserves.

In October 2007, we acquired 75% less one share of Yakutugol, a coal producer located in eastern Siberia, in the Sakha Republic, increasing our stake to 100%. Yakutugol consists of the Kangalassk Open Pit, the Nerungrinsk Open Pit and the Dzhebariki-Khaya Underground Mine and also owns a coal license for the Piatimetrovy and Promezhutochny II coal seams. Yakutugol extracts predominantly coking coal, as well as steam coal. The Nerungrinsk mine produces high-quality coking and steam coal. The Kangalassk mine produces steam coal that is sold as fuel for power plants in the Sakha Republic. The Dzhebariki-Khaya mine produces steam coal, most of which is sold to the state housing and municipal services administration. Yakutugol sells most of its output to the Asian Pacific region, primarily to Japan, South Korea and China, mostly pursuant to annual contracts.

Together with our acquisition of Yakutugol, we also acquired 68.86% of the shares of Elgaugol, which at the time of the acquisition held the license to the undeveloped Elga coal deposit in the Sakha Republic. After

Table of Contents

our acquisition of Elgaugol, the Elga mining license was transferred to Yakutugol effective as of the end of the first quarter of 2008. According to the license conditions, as amended in May 2010, we are required to meet certain operational milestones: (1) completing the legal permits for development of the Elga coal deposit by June 30, 2010 (a plan of initial mine block development was approved by the state authorities on June 30, 2010); (2) commencing construction of the mining plant in November 2009 (we commenced construction of the initial mine block of Elga open pit mine in November 2009); (3) completing construction of the first phase of Elga complex by December 31, 2013 and commencing coal production by November 30, 2010 (we commenced overburden mining at the initial mine block of Elga open pit mine in November 2010); (4) reaching an estimated annual coal production capacity of 9.0 million tonnes in July 2013; and (5) reaching targeted annual coal production of 18 million tonnes by July 2018. In addition, we undertook the obligation to build a rail branch line of approximately 315 kilometers in length, from the Ulak station on the Baikal-Amur Mainline up to the Elga coal deposit by December 31, 2011. See Item 5. Operating and Financial Review and Prospects Contractual Obligations and Commercial Commitments. We will operate this rail branch line as a private railway. However, according to Russian law, once we complete the railroad, we will have to share excess capacity with third parties.

On March 25, 2008, our subsidiary Yakutugol entered into a turn-key contract with Transstroy ZAO Engineering Corporation (**Transstroy**). Under this contract Transstroy undertakes to perform engineering survey works, handle the permitting process and design and build a rail branch line to the Elga coal deposit from the Baikal-Amur Mainline. Yakutugol's obligation is to ensure timely payment, including advances, and build a temporary access road. In September 2009, due to failure to meet certain construction deadlines, we appointed our subsidiary Metallurzhakhtspetsstroy as the general contractor for the rail road construction instead of Transstroy and formed Mechel-Customer United Directorate OOO. Since October 2010, Yakutugol has performed the functions of technical customer in order to ensure closer supervision over the construction process and to obtain required permits. These measures allowed us to advance the construction process and reduce costs of construction works. Pursuant to the agreements currently in effect, in November 2010 we completed construction of an access road to the Elga deposit and in August 2011 we plan to commence temporary transportation of coal products on the rail road from the 209th kilometer point. We plan to complete the construction of the rail road to the Elga coal deposit and to open cargo transportation by December 31, 2011.

In August 2010, Mechel OAO entered into a cooperation agreement with OJSC FGC UES and JSC RusHydro where we agreed on the general principles and forms of cooperation in relation to Elga coal deposit and Nizhne-Bureyskaya water power plant projects. According to the cooperation agreement, Mechel is to complete the electricity-receiving infrastructure at the Elga coal deposit, RusHydro is to construct the Nizhne-Bureyskaya water power plant which is to provide electricity for Elga, and FGC UES is to develop and implement the network to distribute electricity from Nizhne-Bureyskaya water power plant to Elga.

In 1994 Sibirginsk Open Pit Mine (currently a branch of Southern Kuzbass Coal Company) received a coal license to develop the mineral deposits of the Uregolsky 1-2 area. Approximately 1.1 million tonnes of coal have been mined by us since that date at the mine site in the license area. Due to what we believe was a technical error made when the license was originally issued, there is an uncertainty as to whether the Uregolsk license area includes a part of the mine site with 37 million tonnes of coal deposits (the **New Uregolsk license area**). Applicable Russian regulations lack a procedure for correcting license boundaries in the event of an error, and as recently as 2006, 2007 and 2008, we carried out mining activities on the New Uregolsk license area in coordination with, and with the knowledge of, Rostekhnadzor. Furthermore, Southern Kuzbass Coal Company participated in an auction aimed at resolving the title to the New Uregolsk license area. The auction was concluded on June 26, 2008. Southern Kuzbass Coal Company submitted its bids against competing bidders until it believed that the higher bidder's price was not economically justified in light of the estimated reserves in the license area. The final price was significantly higher than Southern Kuzbass Coal Company's last bid. However, the winner of the auction failed to pay and the results of the auction were cancelled by the state authorities. In March 2011, a new tender was held for the right to use the New Uregolsk license

area and Southern Kuzbass Coal Company participated in the tender and was granted the right to use the New Uregolsk license area. We expect to receive the license for New Uregolsk in July 2011. Meanwhile,

Table of Contents

we were involved in certain proceedings related to the usage of the mineral deposits on the New Uregolsk license area. For more information see Item 8. Financial Information Litigation New Uregolsk license area. Currently, no mining activity is conducted in the New Uregolsk license area. We believe that the coal mining at the New Uregolsk license area was in compliance with all applicable laws. Our subsidiary Southern Kuzbass Coal Company could face civil claims; however, we consider it unlikely that such claims will be made. Our mineral reserves as set forth in this document as of December 31, 2010 do not include minerals within the New Uregolsk license area.

U.S. coal mines

Our U.S. coal mines are primarily located within the central portion of the Appalachian Plateau physiographic province, which is a broad upland that extends from Alabama through Pennsylvania. The properties are located in McDowell and Wyoming counties, West Virginia, and are underlain by carboniferous sediments of the Appalachian Basin. This region is operated by the Norfolk Southern railroad and is in close proximity to a large river route by which the coal is transported to the ports in Virginia and the Mexican Gulf ports. The Bluestone properties have four mining complexes, Keystone No. 1 and No. 2 (**Keystone Mining Complexes**), Justice Energy and Dynamic Energy, together comprising five open pit and twelve underground mines.

The Keystone Mining Complexes consists of 28,328 hectares, of which 4,975 hectares are owned, 7,910 hectares are leased on the basis of long term leases expiring from 2031 to 2032 and 15,443 hectares are leased in perpetuity. The mines produce premium quality low volatile coking coal. During the past several years, the Keystone No. 1 Complex has consisted of three open pit, two underground and one highwall mine, a preparation plant and a rail loadout facility served by the Norfolk Southern Railroad. We constructed a new preparation plant at the Keystone Mining Complex No. 2 in 2010 and we plan to construct a loadout facility at the Keystone Mining Complex No. 2 and to start production from the two new underground mines and an open pit mine in 2011.

The Justice Energy complex consists of 7,485 hectares, of which 602 hectares are owned, 1,334 hectares are leased on the basis of long term leases expiring from 2018 to 2019 and 5,549 hectares are leased in perpetuity. Production from the Justice Energy Complex was sold predominantly as medium-volatile coking coal. The complex includes a surface mine and an underground mine, a preparation plant and a rail loadout facility served by the Norfolk Southern Railroad. Additional development plans provide for three underground mines within the Justice Energy surface mine permit. These mines are also expected to produce premium medium volatile coking coal.

The Dynamic Energy Mining Complex utilizes approximately 2,980 hectares, which are leased in perpetuity. The complex includes a surface mine and an underground mine, a coal preparation plant and a rail loadout facility which is served by the Norfolk Southern Railroad. More underground mining operations are planned at the Coal Mountain property which is part of the Dynamic Energy Mining Complex. It is anticipated that these future mining operations will consist of no fewer than three continuous miner sections or two miner units with a single longwall unit. Production from these mines is expected to be premium high volatile coking coal.

In 2010 Bluestone produced 3.1 million tonnes of clean equivalent coal.

Table of Contents

The table below sets forth certain information regarding the mining permits used by our U.S. coal mines.

Mining Complex	Mines and Mining Method⁽¹⁾	Mining Permit Expiry Date	Status⁽²⁾	Year Production Commenced
Keystone Mining Complexes	3 Open Pit	2011 to 2014	In production	2001
	6 Underground	2013 to 2015	2 In production 4 Idle	1998
Justice Energy Mining Complex	1 Open Pit	2012	In production	1982
	5 Underground	2011 to 2014	Idle	2004
Dynamic Energy Mining Complex	1 Open Pit	2012	In production	1997
	1 Underground	2012	Idle	2007

(1) Underground denotes an underground mine; Open Pit denotes a surface mine.

(2) In production refers to sites that are currently producing coal. Idle denotes a mine which is planned to be productive in the future but temporarily neither active nor being developed.

Mine Safety Disclosure

The following information on certain mine safety results is presented for each underground coal mine, surface coal mine, and coal preparation and loading facility owned and operated by Mechel or its subsidiaries in the United States, for the annual period ended December 31, 2010 as reflected in the mine data retrieval system maintained by MSHA:

- (1) Amounts included are the total U.S. dollar value of proposed or outstanding assessments received from MSHA regardless of whether the assessment has been challenged or appealed, for citations and orders occurring during the 12-month period ended December 31, 2010.

Table of Contents

- (2) Pattern or Potential Pattern of Violations. For the 12-month period ended December 31, 2010, none of our operations received written notice from MSHA of (i) a pattern of violations of mandatory health or safety standards that are of such nature as could have significantly and substantially contributed to the cause and effect of coal or other mine health or safety hazards under section 104(e) of the Mine Act; or (ii) the potential to have such a pattern.
- (3) Includes all legal actions pending before the Federal Mine Safety and Health Review Commission, together with the Administrative Law Judges thereof, for each of our operations. These actions may have been initiated in prior quarters. All of the legal actions were initiated by us to contest citations, orders, or proposed assessments issued by MSHA, and if we are successful, may result in the reduction or dismissal of those citations, orders, or assessments.

Section 104(a) S&S Violations. The total number of violations of mandatory health or safety standards that could significantly and substantially contribute to the cause and effect of a coal or other mine safety or health hazard under section 104 of the Mine Act for which the operator received a citation from MSHA;

Section 104(b) Orders. The total number of orders issued under section 104(b) of the Mine Act, which represents a failure to abate a violation under section 104 within the period of time prescribed by MSHA;

Section 104(d) Citations and Orders. The total number of citations and orders for unwarrantable failure of the mine operator to comply with mandatory health or safety standards under section 104(d) of the Mine Act;

Section 110(b)(2) Flagrant Violations. The total number of flagrant violations under section 110(b)(2) of the Mine Act.

Section 107(a) Imminent Danger Orders. The total number of imminent danger orders issued under section 107(a) of the Mine Act;

Proposed MSHA Assessments. The total U.S. dollar value of proposed assessments from MSHA under the Mine Act; and

Fatalities. The total number of mining-related fatalities.

Coal washing plants

We operate five coal washing plants located near our coal mines in Southern Kuzbass and one coal washing plant located near Yakutugol. All of the coal feedstock enriched by our washing plants in 2010 (23.3 million tonnes) was supplied by our own mining operations. In 2010, the capacity of our washing plants in Russia accounted for 19.2% of the total domestic coking coal washing capacity in Russia by volume, according to Rosinformugol. Bluestone currently uses four washing plants: two washing plants at the Keystone Mining Complex (Keystone No. 1 and Keystone No. 2) which are owned by Bluestone; the washing plant at the Justice Energy Mining Complex (Red Fox Property) which is contracted by Bluestone pursuant to a long-term agreement, and the washing plant at the Dynamic Energy Mining Complex (Coal Mountain Property) which is also contracted by Bluestone pursuant to a long-term agreement. Keystone No. 2 was commissioned in December 2010 and Keystone No. 1 has been temporarily idle due to temporary excess of washing capacity as compared to mining capacity at the Keystone mines.

Investments in coal companies

We own 16.13% of Mezhdurechye OAO, a Russian coal producer whose production volume accounted for 4.8% of Russian coking coal output and 2.0% of Russian total coal output in 2010, according to the Central Dispatching Department.

Table of Contents***Coke and coking products production***

We produce coke and coking products from coking coal concentrate at our subsidiaries Moscow Coke and Gas Plant, situated in the Moscow region, and Mechel-Coke, a subsidiary of Mechel Mining, located in the Urals.

The table below summarizes our production of coke and coking coal for the periods indicated.

	2010	2009	2008
	(In thousands of tonnes)		
Coke (6% moisture)	3,884	3,233	3,326
Coking products	145	130	129

Iron ore and concentrate production

Korshunov Mining Plant operates three iron ore mines, Korshunovsk, Rudnogorsk and Tatianinsk, as well as a concentrating plant located outside of the town of Zheleznogorsk-Ilimsky, 120 kilometers east of Bratsk in eastern Siberia. The Korshunovsk mine is located near the concentrating plant. The Rudnogorsk mine is located about 85 kilometers to the northwest of the concentrating plant. The Tatianinsk mine is located about 10 kilometers to the north of the concentrating plant. All three mines produce a magnetite ore (Fe₃O₄). All product is shipped by rail to domestic customers or to seaports for export sales. We acquired Korshunov Mining Plant in 2003.

The table below sets forth the subsoil licenses used by our iron ore mines and the expiration dates thereof.

License Area	License Holder	License Expiry Date	Status	Area (sq. km)	Year Production Commenced
Korshunovsk	Korshunov Mining Plant	June 2014	In production	4.3	1965
Tatianinsk	Korshunov Mining Plant	June 2012	In production	1.3	1986
Rudnogorsk	Korshunov Mining Plant	June 2014	In production	5.1	1984
Krasnoyarsk	Korshunov Mining Plant	July 2015	Feasibility study ⁽¹⁾	3.0	n/a

(1) Not included in our mineral reserves.

The table below summarizes our iron ore and iron ore concentrate production for the periods indicated.

2010	2009	2008
-------------	-------------	-------------

	Tonnes	Grade (% Fe)	Tonnes	Grade (% Fe)	Tonnes	Grade (% Fe)
	(In thousands of tonnes)⁽¹⁾

Limestone production

The Pugachev limestone quarry is an open pit mine located approximately nine kilometers southwest of Beloretsk in the Ural Mountains. The mine has a railway spur connected to the Russian rail system, which is

Table of Contents

controlled by Russian Railways. The quarry was developed in 1952 to support Beloretsk Metallurgical Plant's steel-making facilities, which are currently closed. The Pugachev limestone quarry is owned by our Beloretsk Metallurgical Plant, which we acquired in 2002. The current subsoil license is valid until January 2014.

The quarry produces both high-grade flux limestone for use in steel-making and ferronickel production and aggregate limestone for use in road construction. The flux limestone and aggregate limestone are the same grade of limestone, but they are produced in different fraction sizes, which determine their suitability for a particular use. In 2010, approximately 88.5% of the limestone produced at Pugachev was used internally as auxiliary, with 66.9% shipped to Chelyabinsk Metallurgical Plant, 19.2% shipped to Southern Urals Nickel Plant, 1.8% to Izhstal, 0.6% to Beloretsk Metallurgical Plant, approximately 1.5% sold to third parties, and approximately 10.0% remained in the warehouse and was used for internal needs of the quarry. We are capable of internally sourcing 100% of the limestone requirements of our steel operations.

The table below summarizes our limestone production for the periods indicated.

	2010	2009	2008
	(In thousands of tonnes)		
Limestone production	1,895	1,865	1,692

Sales of mining products

The following table sets forth third-party sales of mining products (by volume) and as a percentage of total sales (including intra-group sales) for the periods indicated.

Product	2010	2009	2008	2010	2009	2008
	(In thousands of tonnes⁽¹⁾)			(% of total sales, including intra-group)		
Coking coal concentrate ⁽²⁾	8,292.1	4,848.4	8,360.3	73.9%	67.1%	77.1%
Steam coal ⁽²⁾	4,249.8	8,224.0	7,629.4	78.6%	93.3%	91.8%
Anthracite and PCI coal	1,853.3	391.0	913.9	86.5%	56.1%	77.1%
Iron ore concentrate	3,283.1	3,786.7	2,713.1	83.9%	93.2%	58.1%
Coke	1,150.5	845.2	1,051.9	31.0%	27.1%	32.5%
Coking Products	171.6	116.6	123.5	100.0%	100.0%	100.0%

(1) Includes resale of mining products purchased from third parties.

(2) Includes only post-acquisition volumes of Bluestone.

The significant increase in coking coal concentrate sales in 2010 against 2009 was due to improved demand in both export and domestic markets. Our steam coal sales declined since a certain part of steam coal was processed and sold as PCI coal.

The following table sets forth revenues by product, as further divided between domestic sales and exports (including as a percentage of total mining segment revenues) for the periods indicated. We define exports as sales by our Russian

and foreign subsidiaries to customers located outside their respective countries. We

Table of Contents

define domestic sales as sales by our Russian and foreign subsidiaries to customers located within their respective countries. See note 23 to our annual consolidated financial statements included herein.

Revenues	2010		2009		2008	
	Amount	% of Revenues (In millions of U.S. dollars, except for percentages)	Amount	% of Revenues	Amount	% of Revenues

(1) Includes revenues from transportation, distribution, construction and other miscellaneous services provided to local customers.

Marketing and distribution

In 2010, our mining products were marketed domestically in Russia primarily through Mechel Trading House and internationally through Mechel Trading and Mechel Carbon in Switzerland. The following table sets forth by percentage of sales the regions in which our mining segment products were sold for the periods indicated:

Region ⁽¹⁾	2010	2009	2008
Russia	32.3%	34.3%	42.0%
Other CIS	8.1%	1.2%	8.8%

Edgar Filing: Mechel OAO - Form 20-F

Europe	18.2%	17.1%	15.1%
Asia	34.8%	37.1%	29.2%
Middle East	2.9%	4.8%	2.3%
Other regions	3.7%	5.5%	2.6%
Total	100%	100%	100%

Table of Contents

- (1) The regional breakdown of sales is based on the geographic location of our customers, and not on the location of the end users of our products, as our customers are often distributors that resell and, in some cases, further export our products.

The following table sets forth information about the five largest customers of our mining segment, which together accounted for 33.1% of our mining segment sales in 2010.

Customer	% of Total Mining Segment Sales	Product	% of Total Products Sales
ArcelorMittal	10.6%	Coking coal concentrate	10.3%
		Steam coal	47.8%
Severstal	8.4%	Coking coal concentrate	8.8%
		Coke	35.7%
EvrazHolding	7.6%	Iron ore concentrate	38.5%
		Coking coal concentrate	6.9%
Ducalion Trading Ltd.	3.6%	Coking coal concentrate	7.1%
		Steam coal	1.8%
Sinosteel	2.9%	Coking coal concentrate	24.8%

*Sales by Russian subsidiaries***Domestic sales**

We generally do not involve intermediaries in the domestic distribution of our mining products. Our domestic coking and steam coal and iron ore customers are generally located in large industrial areas and have had long-standing relationships with us.

We ship our coking coal concentrate from our coal washing facilities, located near our coal mines and pits, by railway directly to our customers, including steel producers. Our largest domestic customer for our coking coal concentrate was Severstal, accounting for 8.8% of our total coking coal concentrate sales and 4.2% of our total mining segment sales in 2010.

Pursuant to a directive from the FAS dated August 14, 2008, we entered into long-term coking coal supply contracts with some of our major domestic customers. These contracts provide for the supply of coking coal concentrate under a fixed price based on the price of premium hard coking coal under one-year contracts under FOB terms from Australian ports, excluding the costs of transshipment and rail transportation, with the application of a coefficient representing the quality of the coal concentrate. Previously, the delivery terms for most of our major domestic customers provided for sale at spot market prices. The long-term contracts were entered into with MMK, EvrazResurs, Severstal, KOKS and Metalltrade for terms of four and five years for a total annual delivery volumes of four to five million tonnes of coking coal. However, MMK, one of our major domestic customers with which we have entered into a five-year contract for delivery of a total of 12 million tonnes of coking coal, has filed a lawsuit in a Russian court seeking rescission of its contract. Metalltrade also has filed a lawsuit seeking termination of its five-year contract. Both of the petitions were dismissed by the court. See Item 8. Financial Information Litigation Commercial litigation. In general, the long-term contracts executed in accordance with the FAS directive do not guarantee sale of

the volumes fixed under the contracts. In practice, customers may refuse to purchase products under these contracts and we have no means to influence them to take the contracted volumes in full.

We have long-term coking coal supply contracts with our major domestic customers Severstal, TC EvrazHolding and Ural Steel with quarterly adjustment of prices.

We ship our steam coal from our warehouses by railway directly to our customers, which are predominantly electric power stations. Our supply contracts for steam coal are generally concluded with

Table of Contents

customers on a long-term basis. Some of our steam coal is consumed within the group; for example, sales of steam coal and middlings (lower-quality coal) from our Southern Kuzbass Coal Company to our Southern Kuzbass Power Plant were \$21.8 million in 2010. In total, 1.2 million tonnes of steam coal was consumed within the group. SUE Housing Sakha Republic (Yakutia) is our largest domestic customer of steam coal, accounting for 20.9% of our total steam coal sales and 0.7% of our total mining segment sales in 2010.

Iron ore concentrate is shipped via railway directly from our Korshunov Mining Plant to customers. Our largest domestic customer, EvrazHolding, accounted for 38.5% of our total iron ore concentrate sales and 4.3% of our total mining segment sales in 2010. We set our prices on a monthly or quarterly basis as agreed with the customers.

Our subsidiary Mecheltrans is a railway freight and forwarding company, which owns its own rail rolling stock, consisting of 409 open cars and 213 pellet cars, leases 640 open cars and has 3,380 open cars under equipment finance leases. Mecheltrans transported domestically approximately 43.0 million tonnes of our cargo in 2010, approximately 64% of which was comprised of coal and iron ore.

Export sales

We export coking coal, low ash washed bituminous coal of various grades, various types of steam coal, anthracite, coke and iron ore concentrate.

In 2010, the largest foreign customer of our mining segment was ArcelorMittal, accounting for 10.0% of our total mining segment sales. ArcelorMittal purchases consisted of coking coal concentrate and steam coal.

We were Russia's largest exporter of coking coal concentrate in 2010, according to RasMin. Our exports of coking coal concentrate primarily go to China, Japan, Ukraine and South Korea. In 2010, ArcelorMittal, Ducalion Trading Ltd., Sinosteel Raw Materials Company Ltd., JFE Steel Company and Shanxi Coking Coal Group were our largest foreign customers of coking coal concentrate, accounting for 29.8% of our total coking coal concentrate sales and 14.2% of our total mining segment sales. Shipments are made by rail to sea ports and further by sea, except for shipments to Ducalion Trading Ltd. that are made only by rail.

Our exports of steam coal, anthracite and PCI coal are primarily to Luxembourg, France and Japan, which together accounted for 31.2% of our total steam coal sales and 6.7% of our total mining segment sales in 2010. In 2010, our largest foreign customers of steam coal (including anthracite and PCI coal) were ArcelorMittal in Europe, Sumitomo Corporation in Japan and Toplofikatsia Rousse in Bulgaria. Steam coal is shipped to customers from our warehouses by railway and further by ship from Russian ports.

Our Port Posiet processed 3.6 million tonnes of coal in 2010. From Port Posiet we ship primarily our steam coal and coking coal concentrate to Japan, Korea and China. The port's current capacity is approximately 3.5 million tonnes of annual cargo-handling throughput and 230,000 tonnes of warehousing capacity depending on coal type. The port's proximity to roads and rail links to key product destinations and transshipment points in China and Russia make it a cost-effective link in the logistical chain for bringing our Yakutugol coal production to market.

In 2010, we used annual contracts for export sales of coking and steam coal. Coal not shipped under annual contracts was sold on the spot market.

We also sold iron ore concentrate to customers in China during 2010, which accounted for 60.2% of our total iron ore concentrate sales and 6.7% of our total mining segment sales in 2010. We ship iron ore concentrate to China by rail and by sea.

Sales by U.S. subsidiaries

Bluestone mining business sold 2.6 million tonnes of coking and steam coal in 2010, 74% of which was sold to the export market. Substantially all of the coal was sold on the spot market. Coal is transported from the mining complexes to customers by means of railroads, trucks, barge lines and ocean-going ships from terminal facilities. All production is shipped via the Norfolk Southern Railroad, so our Bluestone operations are dependent on the capacity of and our relationship with Norfolk Southern Railroad. These shipments either

Table of Contents

go directly to coking plants in North America or to port facilities for transloading into ocean going ships. In 2010, all Bluestone exports went through the port of Norfolk, Virginia.

Market share and competition***Coal***

According to AME, we were among the 10 largest metallurgical coal producers in the world in 2010. The following table lists the major world metallurgical coal (i.e. coking coal and PCI coal) producers in 2010.

Company	Metallurgical Coal Production (Millions of Tonnes)
BHP Mitsubishi Alliance	59
Teck Resources Limited	23
Alpha Natural Resources ⁽¹⁾	17
Anglo American PLC	15
Xstrata PLC	14
Mechel	13
Rio Tinto Group	12
Peabody Energy Corp.	10
Walter Energy ⁽²⁾	9
Patriot Coal Corporation	7

- (2) Pro-forma acquisition of Western Coal by Walter Energy. This assumes the consolidation of Western Coal and Walter Energy estimated export figures.

According to Rosinformugol, in 2010 the Russian coal mining industry was represented by 201 companies, which operated 85 underground mines and 116 open pit mines. As a result of the privatization of 1990s and subsequent mergers and acquisitions, the Russian coal mining industry has become more concentrated. Based on the Central Dispatching Department's data, the ten largest coal mining companies in Russia produced 78.9% of the overall coal production volume in 2010.

According to data from the Central Dispatching Department, in 2010, we were the largest coking coal producer in Russia, with a 22.2% share of total production by volume, and we had a 7.2% market share with respect to overall Russian coal production by volume. We also controlled 19.2% of the coking coal washing facilities in Russia by capacity at the end of 2010, according to Rosinformugol. The following table lists the

Table of Contents

main Russian coking coal producers in 2010, the industrial groups to which they belong, their coking coal production volumes and their share of total Russian production volume.

Source: Central Dispatching Department.

In the domestic coal market, we compete primarily on the basis of price, as well as on the basis of the quality of coal, which in turn depends upon the quality of our production assets and the quality of our mineral reserves. Competition in the steam coal market is also affected by the fact that most steam power stations were built near specific steam coal sources and had their equipment customized to utilize the particular type of coal produced at the relevant local source. Outside of Russia, competition in the steam coal market is largely driven by coal quality, including volatile matter and calorie content.

According to the U.S. Department of Energy/Energy Information Administration, the total production of coal in the United States in 2010 was 1,086 million tonnes. Bluestone's share of total production was 0.29%.

Iron ore

The Russian iron ore market is generally characterized by high demand and limited sources of supply, with product quality as the main factor driving prices. According to Metal-Courier, the market is dominated by relatively few producers, with the top three mining groups being Metalloinvest, the Evraz Group and

Table of Contents

Severstal-Resurs, representing over 69.0% of total production of iron ore concentrate. We were sixth in production volume in 2010 with 4.2 million tonnes of iron ore concentrate, representing 4.3% of total production of iron ore concentrate in Russia.

Mineral reserves (coal, iron ore and limestone)

Our mineral reserves are based on exploration drilling and geological data, and are that part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination. Each year we update our reserve calculations based on actual production and other factors, including economic viability and any new exploration data. Our reserves, consisting of proven and probable reserves, meet the requirements set by the SEC in its Industry Guide 7. Information on our mineral reserves (coal, iron ore, limestone, nickel and chrome) has been prepared by our internal mining engineers as of December 31, 2010. To prepare this information our internal mining engineers used resource and reserve estimates, actual and forecast production, operating costs, capital costs, geological plan maps, geological cross sections, mine advance maps in plan and cross section and price projections. We retained Marston & Marston, Inc., to conduct an independent review of our Russian mineral resources and reserves (coal, iron ore and limestone), and Weir International, Inc., to conduct an independent review of our U.S. mineral resources and reserves (coal). Each of Marston & Marston and Weir International is a U.S. based mining engineering firm qualified to conduct reviews and prepare technical reports on mineral resources and reserves.

Proven reserves presented in accordance with Industry Guide 7 may be combined with probable reserves only if the difference in the degree of assurance between the two classes of reserves cannot be readily defined and a statement is made to that effect. For our Russian properties our proven and probable reserves are presented as combined in this document because, though our deposits have been drilled to a high degree of assurance, due to the methodology used in Russia to estimate reserves the degree of assurance between the two categories cannot be readily defined. We report information on our mineralized material on an annual basis to the Russian State Committee on Reserves (**GKZ**) according to the approved Russian classifications of A, B and C1. In general, provided that Industry Guide 7's economic criteria are met, A+B is equivalent to proven and C1 is equivalent to probable. However, when preparing year-by-year production schedules, due to our practice of preparing our Russian mineralization reports manually and the lack of computerized data and modeling, we do not break out future production by these categories when scheduling and we are not required to do so by the GKZ. These categories are defined for the mine plan as a whole. As these annual production schedules are the basis for estimating our reserves under Industry Guide 7, we are not able to segregate our Industry Guide 7 reserves into proven and probable categories. Although we are in the process of digitizing our data and implementing the use of computerized models and hope to be able to prepare production schedules by category in the future (and hence segregate our Industry Guide 7 reserves by proven and probable categories), currently it would not be commercially feasible for us to do so.

Russian subsoil licenses are issued for defined boundaries and specific periods, generally about 20 years. Our declared reserves are contained within the current license boundary. Our Russian subsoil licenses expire on dates falling in 2012 through 2033. Our most significant licenses expire between 2012 and 2024. Based on the Russian Subsoil Law, as amended, and as currently applied in practice, as evidenced by publicly available information and by a number of court cases, it is reasonably likely that an incumbent subsoil user will be granted license extension through the end of the expected operational life of the deposit. License extensions are being granted subject to the licensee not being in violation of the terms of the license. The cost for the license extension is not substantial. See **Regulatory Matters Subsoil licensing in Russia License extensions**. We have already received extension of two of our licenses and we intend to extend the licenses for all deposits expected to remain productive subsequent to their license expiry dates. However, license extension is not guaranteed and is to a large extent subject to the discretion of regulatory authorities. Therefore, we present our reserves in two categories. Material contained in the production schedule and cash flow that is expected to be mined prior to the license expiration date is referred to as **Within Subsoil License Term Reserves** and material contained in the production schedule and cash flow that is expected to be mined after the license expiration

date is referred to as Outside Subsoil License Term Reserves. See Item 3. Key Information Risk Factors Risks
Relating to Our Business and Industry Our business could be

Table of Contents

adversely affected if we fail to obtain or extend necessary subsoil licenses and mining and other permits or fail to comply with the terms of our subsoil licenses and mining and other permits, Item 3. Key Information Risk Factors Risks Relating to the Russian Federation Legal risks and uncertainties Deficiencies in the legal framework relating to subsoil licensing subject our licenses to the risk of governmental challenges and, if our licenses are suspended or terminated, we may be unable to realize our reserves, which could materially adversely affect our business, financial condition, results of operations and prospects and Regulatory Matters Subsoil licensing in Russia.

The Bluestone companies' mining permits expire in 2011 through 2015. Currently, eleven of our 50 permits issued by the U.S. National Pollutant Discharge Elimination System (NPDES) are pending renewal with the state of West Virginia following orders from the U.S. Environmental Protection Agency (EPA). See Item 3. Key Information Risk Factors Risks Relating to Other Countries Where We Operate The Bluestone companies are subject to extensive U.S. laws, government regulations and other requirements relating to the protection of the environment, health and safety and other matters and face a highly litigious environment.

Coal

As of December 31, 2010, we had coal reserves (proven and probable) totaling 1,316.0 million tonnes, of which approximately 63.0% was coking coal. The table below summarizes coal reserves by mine.

Coal Reserves⁽¹⁾⁽²⁾	Within Subsoil License Term	Outside Subsoil License Term	Total Coal Reserves	Heating Value⁽³⁾⁽⁴⁾	% Sulfur⁽⁴⁾
	(In millions of tonnes)⁽⁵⁾⁽⁶⁾⁽⁷⁾				
Krasnogorsk Open Pit Coking Coal	100.7	106.0	206.7	5,800	0.40

- (1) Reserve estimates use the tonnages that are expected to be mined, taking into account dilution and losses.
- (2) We own 96.6% of Southern Kuzbass Coal Company mines, 74.5% of Tomusinsk Open Pit Mine, 100% of Yakutugol mine, 100% of Elga mine and 100% of Bluestone mines. Reserves are presented for the mines on an assumed 100% ownership basis.
- (3) Heating values (in kcal/kg) are reported on a moisture- and ash-free basis.
- (4) The figures represent the average for the relevant licensed period.
- (5) Volumes are reported on a wet in-place basis.
- (6) The average coal recovery factors for raw coal sent to Siberian Central Processing Plant, Kuzbass Central Processing Plant, Tomusinsk Processing Mills, Krasnogorsk Processing Plant and Nerungrinsk Processing Plant are projected to be 78%, 73%, 82%, 55% and 64%, respectively. The average coal recovery factor for raw coal mined at Elga mine is projected to be 70%.
- (7) In estimating our reserves located in Russia we use coal prices which are in line with 3-year average prices and currency conversions are carried out at average official exchange rates of the Central Bank of Russia. Average prices used were:

Edgar Filing: Mechel OAO - Form 20-F

Southern Kuzbass Coal Company: run-of-mine coking coal \$65.02 per tonne; run-of-mine steam coal \$30.44 per tonne.

Nerungrinsk Open Pit: run-of-mine coking coal \$85.74 per tonne.

Elga: run-of-mine coking coal \$81.91 per tonne; run-of-mine steam coal \$39.32 per tonne.

In estimating our Bluestone reserves we use prices in the range of \$135-140 for coking coal and \$30-35 for steam coal which are in line with 3-year average prices.

- (8) Coal reserves of 130.0 million tonnes in total consist of 69.0 million tonnes of proven and 61.0 million tonnes of probable reserves.
- (9) Coal reserves of 19.7 million tonnes in total consist of 10.4 million tonnes of proven and 9.3 million tonnes of probable reserves.
- (10) Coal reserves of 9.1 million tonnes in total consist of 5.9 million tonnes of proven and 3.2 million tonnes of probable reserves.

Our Dzhebariki-Khaya Underground Mine does not contain mineral reserves. Although it is an operating mine and the geological sampling and density requirements have been met, it fails to meet the economic

Table of Contents

criteria. Our Southern Kuzbass Coal Company subsidiary also has a number of coal mining licenses with which no mineral reserves are associated.

Elga, a coalfield for which our subsidiary Yakutugol holds a subsoil license, is now an undeveloped property in a remote area of Siberia. Elga contains large quantities of export-quality coking and steam coal. Since 1998 there have been several studies on Elga, including geology and resources, mine planning, railway construction and feasibility studies. We plan to mine Elga using open pit mining methods. In 2009, Mechel Engineering worked out the general scheme of the Elga coal complex development, which includes a basic technical layout of the main facilities (housing complex, railway station, concentrating plant) and sets the order of priority of construction and operation of the Elga open pit coal mine. In 2009, the design institute NTC Geotechnology OOO developed a plan of initial mine block development for the three-year period from 2010 until 2012 that allowed us to commence overburden mining at the initial mine block of Elga open pit mine in November 2010. The plan was approved by the Central Commission for Development of the Federal Agency for Subsoil Use.

There are a number of significant risk factors associated with the Elga project. These risks have the potential to impact the calculation of the Elga reserves by affecting the project's legal or economic viability. Key risks that have been identified include the following:

According to the terms of the subsoil license for the Elga coal deposit, we must construct a rail branch line from the Baikal-Amur Mainline to the coal deposit, which would be approximately 315 kilometers in length. The construction of the rail line branch had already started some time before we acquired the Elga coal deposit. Following the acquisition in October 2007, we continued the construction but it was delayed during the period from September 2008 to August 2009 because of limited availability of financing during the global financial crisis. In view of our commitments under the subsoil license, we have proactively applied for and obtained amendments to certain terms of the subsoil license, and in particular, on May 14, 2010, the Ministry of Natural Resources and Ecology extended certain construction deadlines as follows: (1) completion of the construction of the rail branch line was postponed from September 30, 2010 to December 31, 2011, and (2) completion of the construction of the first phase of Elga complex was postponed from October 30, 2010 to December 31, 2013. If the current deadlines are not met, our subsoil license for Elga may be suspended or terminated or we may be required to extend the license under less favorable terms. We believe that given the substantial progress we have made with development of this project and the considerable amount of money we have invested in the project, combined with the importance of this project to the region, we will be able to obtain further extensions of the construction deadlines should they be necessary, but we cannot guarantee that such extensions will be granted.

The viability of the Elga project is dependent upon the construction of the rail branch line referred to above. Construction is currently in process.

A detailed feasibility study was completed on the Elga project in 2005. Currently, a new engineering study is being prepared for the first construction phase of Elga complex which will, among other, specify project capital and operating costs which may change due to further evaluation of the project. In April 2011, we expect to produce the plan for the first construction phase of Elga complex with annual production capacity of 9.0 million tonnes of coal. Increases in capital and operating costs have the potential to make the Elga project uneconomical because of the project's sensitivity to these costs.

The Elga project is very sensitive to market prices for coal because of the high initial capital costs.

Insufficient capacity of ports in the Eastern part of Russia where Elga deposit is located may limit the distribution of coal mined at Elga deposit.

Iron ore

As of December 31, 2010, we had iron ore reserves (proven and probable) totaling 126.2 million tonnes at an average iron grade of 27.9%. The table below summarizes iron ore reserves by mine.

Table of Contents

Iron Ore Reserves⁽¹⁾⁽²⁾⁽³⁾⁽⁴⁾	Within Subsoil License Term	Outside Subsoil License Term (In millions of tonnes)	Total	Grade (% Fe)⁽⁵⁾
Korshunovsk	21.0	19.2	40.2	24.4
Rudnogorsk	20.5	62.0	82.5	29.6
Tatianinsk	0.8	2.8	3.5	26.1
Total	42.3	84.0	126.2	27.9

- (1) Reserve estimates use the tonnages that are expected to be mined, taking into account dilution and losses.
- (2) In estimating our reserves we use an average price of \$82 per tonne of iron ore concentrate and currency conversions are carried out at average official exchange rates of the Central Bank of Russia.
- (3) Volumes are reported on a wet basis.
- (4) We own 85.6% of Korshunov Mining Plant mines. Reserves are presented for the mines on an assumed 100% ownership basis.
- (5) Metallurgical recovery is projected to be 79%.

Limestone

As of December 31, 2010, we had limestone reserves (proven and probable) totaling 20.5 million tonnes at 55.2% calcium oxide.

Limestone Reserves⁽¹⁾⁽²⁾⁽³⁾	Within Subsoil License Term	Outside Subsoil License Term (In millions of tonnes)	Total	Grade (% CaO)
Pugachev	6.0	14.5	20.5	55.2

- (1) Reserve estimates use the tonnages that are expected to be mined, taking into account dilution and losses.
- (2) We own 91.4% of Beloretsk Metallurgical Plant which owns 100% of Pugachev Open Pit, the holder of the subsoil license for the Pugachev limestone quarry. Reserves are presented for the mine on an assumed 100% ownership basis.
- (3) In estimating our reserves we use an average price of \$5.71 per tonne of commodity limestone which is in line with 3-year average price and currency conversions are carried out at average official exchange rates of the

Central Bank of Russia.

Steel Segment

Our steel segment comprises production and sale of semi-finished steel products, carbon steel long products and specialty steel long products, carbon and stainless flat products, and value-added downstream metal products including wire products, stampings and forgings. Within these product groups, we are further able to tailor various steel grades to meet specific end-user requirements. Our steel segment is supported by our mining segment, which includes iron ore concentrate and coke, and our ferroalloys segment, which includes ferronickel, ferrochrome and ferrosilicon.

Our steel segment has production facilities in Russia, Lithuania and Romania. Our total steel output was 5.9 million tonnes in 2008, 5.5 million tonnes in 2009 and 6.1 million tonnes in 2010.

Description of key products

Pig iron. Pig iron is an iron alloy with usual carbon content of above 2% which is produced from smelting iron ore feed (sinter, pellets and other ore materials) in the blast furnace. Cold pig iron is brittle. Liquid pig iron is used as an intermediate product in the manufacturing of steel. Cold pig iron can be used as charging material for steel manufacturing in electric arc furnaces and in manufacturing of cast iron in cupolas. We sell small volumes of pig iron from our Chelyabinsk Metallurgical Plant to third parties.

Table of Contents

Semi-finished products. Semi-finished products typically require further milling before they are useful to end consumers. We offer semi-finished billets, blooms and slabs. Billets and blooms are precursors to long products and have a square cross section. The difference between billets and blooms is that blooms have a larger cross-section which is more than eight inches and is broken down in the mill to produce rails, I-beams, H-beams and sheet piling. Slabs are precursors to flat products and have a rectangular cross section. Such types of products can be produced both by continuous casting of liquid steel and by casting of liquid steel in casting forms with subsequent drafting on blooming mills and on a continuous semifinishing mill. We offer our customers billets and blooms produced by Mechel Targoviste, Izhstal, Chelyabinsk Metallurgical Plant and Ductil Steel, as well as slabs produced by Chelyabinsk Metallurgical Plant.

Long steel products. Long steel products are rolled products used in many industrial sectors, particularly in the construction and engineering industries. They include various types of products, for example, rebar, calibrated long steel products and wire rod, which could be supplied both in bars and coils in a wide range of sizes. Our long products are manufactured at Chelyabinsk Metallurgical Plant, Izhstal and Beloretsk Metallurgical Plant in Russia, and Mechel Campia Turzii, Mechel Targoviste and Ductil Steel in Romania.

We offer our customers a wide selection of long steel products produced from various kinds of steel, including rebar, calibrated long steel products, steel angles, round products, surface-conditioned steel products, wire rod and others.

Flat steel products. Flat steel products are manufactured by multiple drafting slabs in forming rolls with subsequent coiling or cutting into sheets. Plates are shipped after hot rolling or heat treatment. Coiled stock can be subject to cutting lengthwise into slit coils or crosswise into sheets. Stainless steel is used to manufacture plates and cold rolled sheets in coils and flat sheets. Hot rolled plates and carbon and alloyed coiled rolled products are manufactured at Chelyabinsk Metallurgical Plant.

Stampings and forgings. Stampings are custom parts stamped from flat products. Forgings are specialty products made through the application of localized compressive forces to metal. Forged metal is stronger than cast or machined metal. Our forgings and stampings are offered on a made-to-order basis according to minimum batches depending on the products sizes. Our product offerings include rollers and axles used in vehicle manufacturing; bearings, gears and wheels; bars; and others. Our stampings and forgings are produced at Urals Stampings Plant, including its branches. Izhstal and Mechel Targoviste also produce stampings and forgings.

Wire products and seized rolling. Wire products are the result of processing of wire rod and rolled band which are ready for use in manufacturing and consumer applications. Our wire products are manufactured at Izhstal, Beloretsk Metallurgical Plant and Vyartsilya Metal Products Plant in Russia, Mechel Campia Turzii and Ductil Steel in Romania and Mechel Nemunas in Lithuania. Our wide-ranging wire products line includes spring wire; welding electrodes; wire for bearing manufacturing; precision alloy wire; high and low carbon concrete reinforcing wire; galvanized wire; copper-coated and bright welding wire; various types of nails; steel wire ropes specially engineered for the shipping, aerospace, oil and gas and construction industries; aerials for electric trams and buses; steel wire ropes for passenger and freight elevators; general-purpose wire; steel straps and clips; chain link fences; welded (reinforcing) meshes; wire fiber for concrete reinforcing; and others.

Table of Contents

The following table sets out our production volumes by primary steel product categories and main products within these categories.

	2010	2009	2008
	(In thousands of tonnes)		
Pig Iron	4,149	3,805	3,500
Semi-Finished Steel Products, including:	2,212	1,913	1,687
Carbon and Low-Alloyed Semi-Finished Products	1,783	1,806	1,710
Long Steel Products, including:	3,515	3,099	3,348
Stainless Long Products	12	22	15
Alloyed Long Products	383	63	36
Rebar	1,901	1,536	1,535
Wire Rod	713	631	580
Low-Alloyed Engineering Steel	341	430	606
Flat Steel Products, including:	443	345	357
Stainless Flat Products	46	31	37
Carbon and Low-Alloyed Flat Products	397	313	320
Forgings, including:	76	49	72
Stainless Forgings	3	2	1
Alloyed Forgings	45	30	29
Carbon and Low-Alloyed Forgings	28	16	41
Stampings	97	61	86
Wire Products, including:	869	627	719
Wire	672	487	556
Ropes	58	41	52

Steel manufacturing process and types of steel

The most common steel manufacturing processes are production in a basic oxygen furnace, or BOF, and production in an electric arc furnace, or EAF.

In BOF steel manufacturing, steel is produced with less than 2% carbon content. The principal raw materials used to produce steel are liquid pig iron and scrap. The molten steel, depending on the products in which it will be used, undergoes additional refining and is mixed with manganese, nickel, chrome, titanium and other components to give it special properties. Approximately 71% of the world's steel output is made in a BOF, most typically in large-scale plants that must produce 3-4 million tonnes per year to be economically efficient.

In EAF steel manufacturing, steel is generally produced from remelted scrap. Heat to melt the scrap is supplied from high-voltage electricity that arcs within the furnace between graphite electrodes and the scrap. This process is suitable for producing almost all steel grades, including stainless steel; however, it is limited in its use for production of high-purity carbon steel. Approximately 28% of world steel output is made in EAFs.

Steel products are broadly subdivided into two categories – flat and long products. Flat products are hot-rolled or cold-rolled coils and sheets that are used primarily in manufacturing industries, such as the white goods and automotive industries. Long products are used for construction-type applications (beams, rebar) and the engineering industry. To create flat and long products, molten raw steel is cast in continuous-casting machines or casting forms (molds). The molten steel crystallizes and turns into semi-finished products in the form of blooms, slabs or ingots.

Ingots and blooms have a square cross-section and are used for further processing into long products. Slabs have a rectangular cross-section and are used to make flat products. All products are rolled at high temperatures, a process known as hot rolling. They are drawn and flattened through rollers to give the metal the desired dimensions and strength properties. Some flat steel products go through an additional step of rolling without heating, a process known as cold rolling and is used to create a permanent

Table of Contents

increase in the hardness and strength of the steel. After cold rolling, annealing in furnaces with gradual cooling that softens and stress-relieves the metal is periodically required. Oil may be applied to the surfaces for protection from rust.

The properties of steel (strength, solidity, plasticity, magnetization, corrosion-resistance) may be modified to render it suitable for its intended future use by the addition by smelting of small amounts of other metals into the structure of the steel, varying the steel's chemical composition. For example, the carbon content of steel can be varied in order to change its plasticity, or chrome and nickel can be added to produce stainless steel. Resistance to corrosion can be achieved through application of special coatings (including polymeric coatings), galvanization, copper coating or tinning, painting and other treatments.

Steel production facilities

Most of our metallurgical plants have obtained a certificate of quality under ISO international standards. For example, the main manufacturing processes at Beloretsk Metallurgical Plant, Mechel Campia Turzii, Chelyabinsk Metallurgical Plant, Mechel Targoviste, Laminorul Plant, Ductil Steel, Urals Stampings Plant and Izhstal are ISO 9001:2008 certified. Ductil Steel and wire-drawing workshops No. 1 (TS1) and No. 3 (TOT3) of Mechel Campia Turzii are ISO 14001 certified.

Chelyabinsk Metallurgical Plant

Chelyabinsk Metallurgical Plant produces rolled products and semi-finished products for further milling in Russia or our internal needs. Chelyabinsk Metallurgical Plant is sintering production for blast furnaces, BOF/EAF steel mill with rolling production. It produces semi-finished steel products, and flat and long carbon and stainless steel products. Its customer base is largely comprised of customers from the construction, engineering, hardware and ball-bearing industries. We acquired Chelyabinsk Metallurgical Plant in 2001.

The plant sources all of its coking coal needs from Southern Kuzbass Coal Company and from Yakutugol and most of its iron ore needs from our Korshunov Mining Plant and a majority of its nickel needs from our Southern Urals Nickel Plant. In 2006, coke production and specialty steel production were separated from Chelyabinsk Metallurgical Plant into separate entities, including Mechel-Coke, which were wholly-owned subsidiaries of Chelyabinsk Metallurgical Plant. In August 2007, ownership of Chelyabinsk Metallurgical Plant's specialty steel operations was transferred to the Chelyabinsk branch of Urals Stampings Plant. In July 2010, 100% interest in Mechel-Coke was transferred to Mechel Mining.

Chelyabinsk Metallurgical Plant's principal production lines include a BOF workshop equipped with three converters; three EAF workshops equipped with electric arc ovens, including two large ovens of 100 and 125 tonnes, respectively; small-capacity direct- and alternating-current furnaces; four continuous billet-casters; a blooming mill with continuous rolling mill for 200-320 millimeter and 80-180 millimeter billets; six long product mills for 6.5-190 millimeter diameter round bar and 75-156 millimeter square bar, 6.5-10 millimeter wire rod, rebar steel, bands and long products; a hot-rolled flat product workshop with a thick sheet continuous rolling mill for hot-rolled sheets of up to 1,800 millimeters wide and up to 20 millimeters thick; a semi-continuous rolling mill for up to 1,500 millimeters wide and up to 6 millimeters thick hot-rolled coils; a cold-rolled product workshop for 0.3-4 millimeter cold-rolled stainless sheet. In addition, we have at our Chelyabinsk Metallurgical Plant four sintering machines and three blast furnaces. The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for each of Chelyabinsk Metallurgical Plant's principal production areas.

	Capacity	Planned
--	-----------------	----------------

Production Areas	Capacity in 2010	Utilization Rate in 2010	Increase (2011-2013)
	(In thousands of tonnes, except for percentages)		
Sintering	4,760	99.9%	360
Pig Iron	4,300	96.5%	
Steel-making	5,177	99.6%	
Rolling	4,751	94.8%	

Table of Contents

Chelyabinsk Metallurgical Plant produced 5.2 million tonnes of raw steel and 4.5 million tonnes of rolled products in 2010.

In the second half of 2007, we began an upgrade of Chelyabinsk Metallurgical Plant's arc-furnace melting shop No. 6 to increase continuous slab production capacity to 1.2 million tonnes per year. Danieli & C. Officine Meccaniche S.p.A. (**Danieli**), an Italian supplier of equipment and plants to the metals industry, is the basic equipment provider for the concasting machine and the out-of-furnace processing complex. In July 2010 we commissioned new production complex in arc-furnace melting shop No. 6 which consists of ladle furnace, vacuum degasser and a slab concaster. Currently, contractual equipment tests are being completed.

In 2008, we initiated construction of a universal rail and structural rolling mill at the Chelyabinsk Metallurgical Plant. The project is aimed at producing new types of large section structural shapes (including beams, angles, rails, channels and special sections) with total output 1.1 million tonnes per annum.

The project will require \$664.9 million in capital investments. The launch of the new rolling mill is scheduled for the end of 2011. On June 30, 2008, Chelyabinsk Metallurgical Plant entered into an agreement with Danieli to supply the universal rolling mill. The total amount of the contract is 220.0 million. In order to perform design, construction-and-assembling and pre-commissioning works on the rolling mill, on October 29, 2008, Chelyabinsk Metallurgical Plant signed a contract with the Chinese construction company Minmetals Engineering Co. Ltd. (**Minmetals**). The contract is concluded on a turnkey basis with a total value of \$261.0 million.

We expect that the main target customers for the universal mill products will be Russian Railways and construction companies. On November 13, 2008, Chelyabinsk Metallurgical Plant and Russian Railways signed an agreement for supply of rails for the period until 2030. The annual minimum supply volume is fixed at 400,000 tonnes of rail. Performance under the agreement is subject to the commissioning of the universal rail and structural steel mill at the Chelyabinsk Metallurgical Plant.

In December 2010 Mechel Materials started the assembling of the main manufacturing equipment of the grinding-mixing complex for Portland blast-furnace slag cement production with 1.6 million tonnes capacity per annum on the premises of Chelyabinsk Metallurgical Plant. The main raw material will be blast furnace slag produced by Chelyabinsk Metallurgical Plant, which will result in non-waste production of pig iron at the facility. This complex will be the first Russian facility producing high quality Portland blast-furnace slag cement of certain grade (CEMIII/A). Portland blast-furnace slag cement is widely used for production of reinforced concrete goods which are widely used in construction industry. The general contractor is Austrian FMW GmbH. The amount to be invested is estimated at 110.0 million. The commissioning of the grinding-mixing complex is planned for the second quarter of 2012.

Izhstal

Izhstal is a specialty steel producer located in the western Urals city of Izhevsk, in the Udmurt Republic, a Russian administrative region also known as Udmurtia. Its customer base is largely comprised of companies from the aircraft, defense, automotive, agricultural, power, oil and gas and construction industries. We acquired Izhstal in 2004.

Izhstal's principal production lines include one EAF of 30 tonnes; aggregate ladle furnace and ladle vacuum oxygen decarburizer; blooming mill for 100-220 millimeter square billets; three medium-sized long products rolling mills for 30-120 millimeter round bars, 30-90 millimeter square bars, bands and hexagonal bars; and one continuous small sort wire mill for 5.5-29 millimeter round, 12-28 millimeter square and 12-27 millimeter hexagonal light sections, reinforced steel and bands. It also has a drawing and seizing workshops, equipped with, among other things, various drawing machines, a pickling line, bell furnaces and patenting lines. In May 2009, the electrical open hearth

workshop, equipped with three open hearth furnaces of 130-135 tonnes each and three electric furnaces of 30 tonnes each, was stopped because its operations were not

Table of Contents

profitable. The following table sets forth the capacity and the capacity utilization rate for each of Izhstal's principal production areas.

Production Areas	Capacity in 2010	Capacity Utilization Rate in 2010	Planned Increase (2011-2013)
	(In thousands of tonnes, except for percentages)		
Steel-making	85	92.1%	266
Rolling	390	86.5%	30
Wire products and seized rolling	57.1	81.9%	
Forging and stamping	21.6	79.1%	

Izhstal produced approximately 78.3 thousand tonnes of raw steel, 337.3 thousand tonnes of rolled products, 46.7 thousand tonnes of wire products and seized rolling and 17.1 thousand tonnes of stampings and forgings in 2010.

In order to improve Izhstal's efficiency, in the second half of 2007 we began the first stage of an upgrade at the Izhstal mill, including the installation of a new modern electric arc furnace with a total capacity of 40 tonnes, an out-of-furnace processing complex and a new concasting machine, in addition to reconstruction of rolling mill No. 250 and the disposal of outdated open-hearth furnaces. The new electric steelmaking complex was commissioned in September 2010 and currently equipment tests are being carried out. Reconstruction of rolling mill No. 250 which had been suspended due to the global financial and economic crisis of 2008-2009 was resumed in October 2010. The upgrade process will result in: (1) significant reductions in consumption of metal, natural gas and electric power in rolled product manufacturing, (2) improvements in product quality to meet current international standards and expansion of product range, and (3) environmental improvements.

Beloretsk Metallurgical Plant

Beloretsk Metallurgical Plant is a wire products plant in Beloretsk, in the southern Ural mountain range, that produces wire rod and a broad range of wire products from semi-finished steel products supplied by Chelyabinsk Metallurgical Plant. Its customers are largely from the construction and engineering industries. We acquired Beloretsk Metallurgical Plant in 2002.

Beloretsk Metallurgical Plant's principal production lines include a steel-rolling workshop equipped with a wire mill for production of wire rod of 5.5-13.5 millimeters in diameter; a number of wire products workshops equipped with drawing, rewinding, wire stranding, cabling and closing machines and heat treatment furnaces, wire annealing and galvanizing, patenting and galvanizing lines; and a cold rolling line. In 2010, we invested \$3.5 million to improve product quality, increase output, reduce production costs and increase profitability. Due to this investment, in December 2010 we started-up a MIG/MAG welding wire line with a total cost of \$2.9 million. The wire is actively used in machinery and construction industries for welding of building structures and machine parts. The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for each of Beloretsk Metallurgical Plant's principal production areas.

Production Areas	Capacity in 2010	Capacity Utilization Rate in 2010	Planned Increase (2011-2013)
-------------------------	-----------------------------	--	---

(In thousands of tonnes, except for percentages)

Rolling	630	99.5%	
Wire products	490	98.6%	47

Beloretsk Metallurgical Plant produced a total of 714.8 thousand tonnes of steel products made from semi-finished products in 2010, including Chelyabinsk Metallurgical Plant's semi-finished products (wire rod) which were used in wire products production in the amount of 98.3 thousand tonnes. Wire products production amounted to 483.0 thousand tonnes. Rolled products production amounted to a total of 626.8 thousand tonnes, out of which 395.0 thousand tonnes were further processed into wire products and 231.8 thousand tonnes constituted the output volume of wire rod for third party customers.

Table of Contents*Vyartsilya Metal Products Plant*

Vyartsilya Metal Products Plant is a wire products plant in the Karelian Republic, an administrative region in northwestern Russia near the Finnish border that produces low carbon welding, general-purpose and structural wire, nails and steel bright and polymeric-coated chain link fences. The plant uses wire rod supplied by Chelyabinsk Metallurgical Plant and Beloretsk Metallurgical Plant. The plant's customers are largely from the construction, automotive and furniture industries. We acquired Vyartsilya Metal Products Plant in 2002.

Vyartsilya Metal Products Plant's principal production facilities include drawing and chain linking machines and nail presses. The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for Vyartsilya Metal Products Plant's principal production area.

Production Areas	Capacity in 2010 (In thousands of tonnes, except for percentages)	Capacity Utilization Rate in 2010	Planned Increase (2011-2013)
Wire products	120	98.7%	10

Vyartsilya Metal Products Plant produced 118.4 thousand tonnes of wire products in 2010.

Urals Stampings Plant

Urals Stampings Plant produces stampings from specialty steels and heat-resistant and titanium alloys for the aerospace, oil and gas, heavy engineering, railway transportation, power and other industries. Urals Stampings Plant sources its specialty steel needs from Chelyabinsk Metallurgical Plant. We acquired Urals Stampings Plant in 2003.

Urals Stampings Plant's principal production facilities include 1.5-25 tonne swages and hydraulic presses. The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for Urals Stampings Plant's principal production area.

Production Areas	Capacity in 2010 (In thousands of tonnes, except for percentages)	Capacity Utilization Rate in 2010	Planned Increase (2011-2013)
Stampings and forgings	100	79.7%	

Urals Stampings Plant produced 79.7 thousand tonnes of specialty steel stampings in 2010.

Mechel Targoviste

Mechel Targoviste is a major Romanian EAF steel mill that produces specialty and carbon long products, forgings and seized rolling. Mechel Targoviste is the largest producer of rebar in Romania and the second largest producer of raw steel in Romania, according to Metal Invest Consulting, a member of UniRomSider, a Romanian association of steel

manufacturers. The plant's customers are largely from the engineering, automotive, tool, ball-bearing, tube, seized rolling and construction industries. We acquired Mechel Targoviste in 2002.

Mechel Targoviste's principal production lines include an EAF workshop equipped with one modernized electric arc furnace with a 75-tonne capacity; steel vacuum processing and two stove-basket aggregates; a continuous billets caster; a blooming mill for 80-400 millimeter square and 90-145 millimeter round billets; and two continuous long products rolling mills for 20-80 millimeter round bars, 24-57 millimeter hexagonal bars, 60-70 millimeter square bars, bands of 6-12 millimeter thickness and 60-120 millimeter width, 12-26 millimeter bundle rod and reinforcing steel; and a press-forging workshop. The following table sets forth the

Table of Contents

capacity utilization rate and the planned increase in capacity for each of Mechel Targoviste's principal production areas.

Production Areas	Capacity in 2010 (In thousands of tonnes, except for percentages)	Capacity Utilization Rate in 2010 (In thousands of tonnes, except for percentages)	Planned Increase (2011-2013)
Steel-making	550	81.1%	
Forging and stamping	37	4.5%	
Rolling	780	56.0%	
Seized rolling	18	10.8%	

Mechel Targoviste produced 445.9 thousand tonnes of raw steel, 436.5 thousand tonnes of rolled products, 1.9 thousand tonnes of seized rolling and 1.7 thousand tonnes of forgings in 2010.

In 2010, Mechel Targoviste experienced low rolling capacity utilization rates due to efforts to reduce production costs and increase quality, as well as due to the inefficiency of running its blooming process, involving high-capacity machinery with high power requirements, at low capacity utilization levels. With the aim to increase efficiency, in 2010 we introduced a new technology of steel casting at Mechel Targoviste. The low forging and stamping capacity utilization rates were due to a decrease in demand both in domestic and export markets.

Mechel Campia Turzii

Mechel Campia Turzii is a Romanian wire products plant that produces different kinds of wire products (including various types of wire, ropes, meshes, welding electrodes and nails) as well as long steel products. The plant's customers are largely from the construction and engineering industries. We acquired Mechel Campia Turzii in 2003.

Mechel Campia Turzii's principal production lines include several wire drawing workshops equipped with drawing machines, nail-making presses and wire annealing and galvanizing lines, wire patenting lines, as well as combined patenting and galvanizing lines. The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for each of Mechel Campia Turzii's principal production areas.

Production Areas	Capacity in 2010 (In thousands of tonnes, except for percentages)	Capacity Utilization Rate in 2010 (In thousands of tonnes, except for percentages)	Planned Increase (2011-2013)
Rolling ⁽¹⁾	300	68.4%	
Wire products	100	61.7%	

(1) Includes steel rolled for further processing in the wire products manufacturing process as well as rolling of products ready for sale.

Mechel Campia Turzii produced 140.5 thousand tonnes of rolled products and 61.7 thousand tonnes of wire products in 2010.

Mechel Nemunas

Mechel Nemunas is a Lithuanian wire products plant that produces drawn, annealed and seized wire, nails, steel wire fiber and chain link fences. Its customers are primarily from the construction, engineering and furniture industries. We acquired Mechel Nemunas in 2003.

Table of Contents

Mechel Nemunas's principal production facilities include drawing machines and nail presses with shank threading, chain linking machines and bell furnaces. The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for Mechel Nemunas's principal production area.

Production Areas	Capacity in 2010	Capacity Utilization Rate in 2010	Planned Increase (2011-2013)
	(In thousands of tonnes, except for percentages)		
Wire products	70	86.7%	

Mechel Nemunas produced 60.7 thousand tonnes of wire products in 2010.

Ductil Steel

Ductil Steel is a Romanian company that owns the Buzau plant, which produces reinforcing rolled products, wire rod and wire products, and the Otelu Rosu plant, which produces steel and billets. The Otelu Rosu plant's products are supplied to the Buzau plant, Mechel Campia Turzii and Laminorul Plant. We acquired Ductil Steel in 2008.

Prior to this acquisition, we already owned two steel plants in Romania: Mechel Targoviste and Mechel Campia Turzii. Following our acquisition of Ductil Steel, in order to enhance the performance and efficiencies of our Romanian subsidiaries, we established Mechel East Europe Metallurgical Division, effective from October 22, 2008.

The main objective of the Mechel East Europe Metallurgical Division is to coordinate the operations of Mechel's steel subsidiaries in Eastern Europe, including investment, modernization, streamlining and production cost reduction efforts through the implementation of efficient logistics planning for raw material purchases and product marketing, as well as to provide our Romanian plants with billets produced by some of these subsidiaries. Additionally, the Mechel East Europe Metallurgical Division handles human resources policy and coordinates contacts with banks and other financial institutions. The division's top priority is the modernization of the Ductil Steel Buzau, Otelu Rosu, Mechel Targoviste, Mechel Campia Turzii and Laminorul steel plants.

Ductil Steel's principal production facilities include one EAF with capacity of 110 tonnes, ladle furnace with capacity of 105 tonnes, a continuous billets caster, a continuous rolling mill and several wire processing workshops equipped with drawing machines, nail-making presses and wire annealing, annealing and galvanizing lines, cold rolling lines for reinforcing wire and mesh-welders for its processing into reinforcing meshes. In 2010, second EAF with capacity of 110 tonnes equipped with COSS system for scrap heating by waste gases was erected. The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for Ductil Steel's principal production area.

Production Areas	Capacity in 2010	Capacity Utilization Rate in 2010	Planned Increase (2011-2013)
	(In thousands of tonnes, except for percentages)		
Steel-making	388	93.1%	162

Rolling	300	59.3%	140
Wire products	105	82.4%	

Ductil Steel produced 361.0 thousand tonnes of raw steel, 178.0 thousand tonnes of rolled products and 86.5 thousand tonnes of wire products in 2010.

Laminorul Plant

Laminorul Plant is a steel plant located in southeast Romania in close proximity to the Braila ports on the Danube River. The plant has two rolling mills for production of structural shapes (including beams, channels, equal and unequal angles for machinery and construction), which have a production capacity of over 380,000 tonnes of rolled products per year. Laminorul Plant is the only producer in Romania of flat bulb steel used in

Table of Contents

shipbuilding. We acquired Laminorul Plant in 2010. The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for Laminorul Plant's principal production area.

Production Areas	Capacity in 2010	Capacity Utilization Rate in 2010	Planned Increase (2011-2013)
	(In thousands of tonnes, except for percentages)		
Rolling	380	41.6%	

Laminorul Plant produced 158.0 thousand tonnes of rolled products in 2010.

Sales of steel products

The following table sets forth our revenues by primary steel segment product categories and our main products within these categories (including as a percentage of total steel segment revenues) for the periods indicated. Steel segment sales data presented in Steel Segment do not include intercompany sales.

Revenues	2010		2009		2008	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
	(In millions of U.S. dollars, except for percentages)					
Pig Iron	63.5	1.1%	45.4	1.4%	19.1	0.4%
Semi-Finished Products, including:	1,235.4	22.1%	496.8	15.8%	475.7	9.2%
Carbon and Low-Alloyed Semi-Finished Products ⁽¹⁾	1,091.9	19.5%	481.3	15.3%	425.1	8.2%
Long Steel Products, including:	2,194.3	39.3%	1,463.6	46.6%	2,682.4	51.9%
Stainless Long Products	52.5	0.9%	43.4	1.4%	53.0	1.0%
Alloyed Long Products	226.5	4.1%	68.6	2.2%	158.0	3.1%
Rebar	1,150.3	20.6%	877.5	27.9%	1,632.8	31.6%
Wire Rod	287.5	5.1%	203.5	6.5%	240.3	4.7%
Carbon and Low-Alloyed Engineering Steel	477.5	8.5%	270.5	8.6%	598.3	11.6%
Flat Steel Products, including:	463.1	8.3%	262	8.3%	475.6	9.2%
Stainless Flat Products	203.9	3.6%	103.2	3.3%	184.6	3.6%

Forgings, including:	121.0	2.2%	76.4	2.4%	180.9	3.5%
Stainless Forgings	22.8	0.4%	12.2	0.4%	24.5	0.5%
Alloyed Forgings	6.5	0.1%	2.7	0.1%	20.8	0.4%
Carbon and Low-Alloyed Forgings	67.4	1.2%	58.8	1.9%	107.2	2.1%
Forged Alloys	24.2	0.4%	2.1	0.1%	28.3	0.5%
Stampings	188.9	3.4%	136.8	4.4%	236.1	4.6%
Wire Products, including:	722.4	12.9%	473.2	15.1%	891.5	17.3%
Wire	491.6	8.8%	319.5	10.2%	640.2	12.4%

Edgar Filing: Mechel OAO - Form 20-F

Ropes	75.2	1.3%	45.8	1.5%	84.4	1.6%
Other	597.6	10.7%	189.1	6.0%	202.8	3.9%
Total	5,586.2	100%	3,143.3	100%	5,164.1	100%

(1) Excludes revenues from slab sales.

Table of Contents

The following table sets forth by percentage of sales the regions in which our steel segment products were sold for the periods indicated.

Region⁽¹⁾	2010	2009	2008
Russia	55.2%	49.7%	58.5%
Other CIS	6.7%	8.0%	5.8%
Europe	17.7%	18.9%	24.8%
Asia	2.8%	6.0%	2.3%
Middle East	14.7%	16.0%	5.8%
United States	0.3%	0.3%	0.7%
Other	2.6%	1.1%	2.1%
Total	100%	100%	100%

(1) The regional breakdown of sales is based on the geographic location of our customers, and not on the location of the end users of our products, as our customers are often distributors that resell and, in some cases, further export our products.

In 2010, the five largest customers of our steel segment products were SteelLoyd General Trading LLC (semi-finished steel and long products), Amesco FZE (semi-finished products and long products), Stemcor UK Limited (carbon and low-alloyed semi-finished products, rebar, long products and other steel products), Al-Tuwarqi Holding Company (carbon and low-alloyed semi-finished products) and Nova P.M. Steel Company Limited (carbon and low-alloyed semi-finished products), which together accounted for 8.0% of our steel segment sales. In 2010, we increased our business with a number of Russian and foreign metallurgical plants and trading companies, which are considered related parties in our consolidated financial statement (the **related metallurgical plants**). In 2010, we also started selling pig iron and semi-finished products to Metallurg-Trust OOO (**Metallurg-Trust**), a trading company mostly involved in supplying raw materials and semi-finished products to the Russian related metallurgical plants and reselling products produced by these plants. See Item 7. Major Shareholders and Related Party Transactions Related Party Transactions. This led to increase of sales of our semi-finished products, flat products, long products, forgings, pig iron and other products, as well as of semi-finished products we purchased on the market. Revenues from sales to related metallurgical plants and Metallurg-Trust amounted to 9.2% of our steel segment sales in 2010.

The majority of our steel segment export sales are made to independent distributors. Contracts with distributors generally specify certain ports to which we must deliver our products. The distributors take delivery of our products at these locations, and further on-sell the products to other distributors or end users. When these distributors take delivery of our products, we are provided in certain instances with documentation showing the further destination of our products. We do not have control over the final destination of our products, contractually or otherwise.

Based on such documentation, we are aware that certain of our products are sold to countries that are subject to international trade restrictions or economic embargoes that prohibit and/or materially restrict certain persons (for instance, U.S. incorporated entities and U.S. citizens or residents) from engaging in commercial, financial or trade transactions with such countries, including Iran and Syria (the **Sanctioned Countries**). We estimate that approximately 7.3% of our total sales in 2010 were sold in the Sanctioned Countries, mostly by independent distributors to other distributors or end-users. Such sales accounted for 7.1% of our total sales in 2009.

In addition, we have a very limited number of direct sales to customers in the Sanctioned Countries, amounting to approximately 0.9% of our total sales in 2010.

We are aware of governmental initiatives in the United States and elsewhere to adopt laws, regulations or policies prohibiting or materially restricting transactions with or investment in, or requiring divestment from, entities doing business with the Sanctioned Countries. We recognize that acts prohibiting or restricting the foregoing can sometimes be applied to our company and we admit that dealings with the Sanctioned Countries can have an adverse effect on our business reputation.

Table of Contents

The following table sets forth information on our domestic and export sales of our primary steel product categories for the periods indicated. We define exports as sales by our Russian and foreign subsidiaries to customers located outside their respective countries. We define domestic sales as sales by our Russian and foreign subsidiaries to customers located within their respective countries. See note 23 to our consolidated financial statements.

Products	2010	2009	2008
	(In millions of U.S. dollars, except for percentages)		
Pig Iron	63.5	45.4	19.1
Domestic Sales	62.7%	39.8%	100.0%
Export	37.3%	60.2%	0.0%
Semi-Finished Steel Products	1,235.4	496.8	475.7
Domestic Sales	18.2%	7.8%	18.7%
Export	81.8%	92.2%	81.3%
Long Steel Products	2,194.3	1,463.6	2,682.4
Domestic Sales	74.7%	69.2%	81.8%
Export	25.3%	30.8%	18.2%
Flat Steel Products	463.1	262	475.6
Domestic Sales	96.8%	86.7%	79.7%
Export	3.2%	13.3%	20.3%
Forgings	121.0	76.4	180.9

Domestic Sales	67.2%	63.2%	74.9%
Export	32.8%	36.8%	25.1%

The end users of our steel products vary. Our rebars are principally used in the construction industry. The main end users of our wire rods are small wire-drawing operations. Our carbon sheet is used in construction (covers, floor plates), the automotive industry (spare parts) and pipe manufacturing and shipbuilding (non-critical applications). Our high-quality round bars are used in various moving parts manufactured by the automotive industry (spare parts, gear boxes), the machinery industry (hydraulic devices, drill bits), the shipbuilding industry (forged parts), the basic materials industry (molds, balls for crushing) and other industries. Our forgings and stampings are primarily used in the automotive, aerospace, petrochemical, textile and food and consumer goods sectors.

Table of Contents

The following table sets forth by percentage a breakdown of our shipment volumes of all products produced in Russia by industry sector within the Russian market in 2010.

Use by Industry	Metal Works, Wire Products Plants	Pipe Factories	Railway				Other Industries ⁽¹⁾
			Construction	Engineering	Repair	Construction, Power Generation	
Semi-Finished Steel Products	92.2%	3.9%	0.7%	1.4%	0.0%	0.0%	1.8%
Long Steel Products	2.6%	1.3%	40.5%	10.0%	0.7%	0.1%	44.7%
Flat Steel Products	5.5%	26.1%	18.8%	10.3%	1.6%	0.2%	37.6%
Forgings	2.2%	67.0%	0.0%	16.9%	0.0%	0.0%	13.9%
Stampings	0.2%	0.0%	0.0%	94.5%	0.3%	0.1%	4.9%
Wire Products	11.5%	0.6%	19.8%	7.8%	5.4%	0.3%	54.7%

(1) Including the defense, aerospace, petrochemical, textile, food and consumer goods sectors.

Marketing and distribution

We use flexible sales strategies that are tailored to our customers and the markets we serve. Our overall sales strategy is to develop long-term, close partnerships with the end users of our products. As part of our end-user strategy, we research sales to distributors to identify the end user and directly market our steel capabilities and products to these customers. With respect to our largest end-user customers, we have established working committees, composed of our manufacturing engineers and customer personnel. These committees meet quarterly to monitor the performance of our products and ensure that our customers' specifications and quality requirements are consistently met. These committees also provide customers with the opportunity to discuss their future needs with us. Our sales force also regularly follows up with these and many of our other customers. We attend industry conferences and advertise in industry periodicals to market our products and capabilities. Through these efforts, we have established a strong brand identity for Mechel throughout Russia and other countries of the CIS, Central and Eastern Europe, Southeast Asia and the Middle East.

Mechel Service Global, through its subsidiaries, provides local end-user customers in Europe, Russia, Kazakhstan and Turkey with our steel products. Mechel Service Global's subsidiaries help us to develop and service our long-standing customer relationships by providing highly specialized and technical sales and service to our customers.

In 2010, most of our production facilities handled their domestic wholesales independently, and our export wholesales were marketed by Mechel Trading.

We also market and sell steel products sourced from, and supply our products as well as products we purchase on the market to, related metallurgical plants. See Item 7. Major Shareholders and Related Party Transactions - Related Party Transactions.

Domestic sales

Our Russian steel production facilities Chelyabinsk Metallurgical Plant, Izhstal and Urals Stampings Plant are located in large industrial areas and have long-standing relationships with local wholesale customers. Mechel-Service, a Russian subsidiary of Mechel Service Global, has 71 storage sites in 46 cities throughout Russia to serve our end-user customers, which helps us to establish long-standing customer relationships by virtue of proximity to both production and customers. Mechel-Service had 1,397 employees as of December 31, 2010.

Our Romanian domestic sales are carried out by our Romanian subsidiaries Mechel Campia Turzii, Mechel Targoviste, Ductil Steel, Laminorul Plant and Mechel Service Romania.

Table of Contents

Export sales

Most of the exports in our steel segment are made to independent distributors, which then sell our products to end users. Our subsidiary Mechel Trading has active wholesales offices in Liechtenstein, Belgium, Switzerland and Singapore.

We actively develop sales of high-quality rolled steel products to local end-user customers in Europe through Mechel Service Global's subsidiaries. In 2010, Mechel Service Global established new subsidiaries in the UK, France and Hungary, as well as WNL Staal B.V. (Netherlands), Femax a.s. (Czech Republic) and Ramateks Metal Sanayi ve Ticaret a.s. (Turkey) entered into Mechel Service Global that year. In Germany, HBL Holding, a subsidiary of Mechel Service Global, opened three new offices. Our production facilities supply high-quality rolled steel products to the subsidiaries of Mechel Service Global in Western Europe either directly, or through the logistics center in the Port of Antwerp. Our logistics center in the Port of Antwerp also allows us to sell high-quality rolled steel products to manufacturing and service companies on a walk-in basis.

Our Romanian export sales are carried out directly by our Romanian production facilities Mechel Campia Turzii, Mechel Targoviste, Laminorul Plant and Ductil Steel as well as by Mechel Service Global and Mechel Trading.

Distribution

Rail transportation is used for most of shipments from our production facilities and warehouses to our end customers, wholesale warehouses or sea ports.

Market share and competition

In our core export markets, we primarily compete with Russian and Ukrainian producers. The leading global steel manufacturers have been increasingly focused on value-added and higher-priced products. The principal competitive factors include price, distribution, product quality and customer service.

In the Russian market, we compete on the basis of price and quality of steel products, their added value, product range and service, technological innovation and proximity to customers. The Russian steel industry is characterized by a relatively high concentration of production, with the six largest integrated steel producers, including ourselves, accounting for 84.8% of overall domestic crude steel output in 2010, according to Metal Expert.

The following is a brief description of Russia's five largest steel producers excluding ourselves:

Evraz Group S.A., whose Russian operations include the steel producers Nizhny Tagil Metallurgical Works OAO, ZapSib and Kuznetsky Metallurgical Works OAO, is Russia's largest steel manufacturer by volume on a consolidated basis, accounting for 17.3% of Russia's total commodity steel products output (including long products, flat products, and semi-finished products) in 2010. Evraz Group focuses on the production of long products, including rebars, wire rods and profiled rolled products (such as rails, beams and channels). Evraz Group also controls iron ore producers Kachkanar GOK OAO and Vysokogorsky GOK OAO and coking coal producer Yuzhkuzbassugol Coal Company OAO, and has an equity investment in Raspadskaya OAO, which produces coking coal.

Novolipetsk Metallurgical Works OAO (NLMK) had 14.7% of the volume of Russian commodity steel production in 2010. The company produces primarily flat products (hot-rolled and cold-rolled), including galvanized products. NLMK exported 70.1% of its products in 2010. Domestically, NLMK's largest customers are in the construction and oil and gas industries, followed by companies in the automotive sector. NLMK also

controls iron ore producer Stoylensky GOK. The company's steel facilities are located in Lipetsk, to the southeast of Moscow. NLMK also controls Maxi-Group OAO in Russia, which operates two steel production sites in the Sverdlovsk region: square billet and long steel producer Nizhneserginsky Hardware & Metallurgical Works and long steel and wire products producer Berezovsky Electro-Steel Works. These facilities are managed by the NLMK-Long steel OOO which had a 2.8% share in domestic commodity steel products output in 2010.

Table of Contents

*Magnitogorsk Iron & Steel Works OAO (**MMK**)* is Russia's third-leading steel manufacturer by volume, accounting for 17.2% of the volume of Russian commodity steel products output in 2010. MMK's product mix is comprised mostly of flat products, representing 87.6% of its commercial steel products output (including semis) in 2010. Domestically, MMK controls a significant portion of the supplies to the oil and gas and automotive sectors. MMK exported 37.8% of its output in 2010. Its production facilities are located in Magnitogorsk in the southern Urals.

Severstal OAO had a 17.0% share by volume of Russian commodity steel products output in 2010. The company specializes in flat products which constitute a significant part of its production. Severstal is the second-leading producer of flat products and controls 30.3% of Russia's total flat products output. Domestic sales accounted for 55.1% of Severstal's output in 2010, with the oil and gas industry and automotive sector as its leading customers. Severstal also controls coal producer VorkutaUgol and iron ore producers Karelsky Okatysh and Olenegorsky GOK, which satisfy a portion of Severstal's coking coal and iron ore requirements.

*Metalloinvest Management Company OOO (**Metalloinvest**)*, whose Russian assets consist of Oskolsky Electric Metallurgical Works OAO (**OEMK**) and Ural Steel OAO, had a 8.4% share of Russian commodity steel products output. OEMK produces only long products, and Ural Steel produces both long and flat products. Metalloinvest exported 64.7% of its commodity steel production in 2010. The company's production facilities are located in the Central and Urals federal districts of Russia. Metalloinvest also controls Russia's largest iron ore and pellets production facilities: Lebedinsky GOK OAO and Mikhailovsky GOK OAO.

Source: Company websites; Metal Expert.

These six companies, including ourselves, can be divided into two groups by product type. MMK, Severstal and NLMK focus mainly on flat products, while we, Evraz Group and Metalloinvest produce primarily long products. Mechel is the second largest and most comprehensive producer of specialty steel and alloys in Russia, and accounted for 26.9% of total Russian specialty steel output by volume in 2010, according to Chermet and Metal Expert. We are also the second largest producer of long steel products (excluding square billets) in Russia by volume, with significant market shares in both regular long steel products and specialty long steel products, according to Metal Expert and Chermet.

In the Russian non-specialty long steel product category, our primary products and our market positions by production volume in 2010 were as follows, according to Metal Expert:

Reinforcement bar (rebar) In rebar, we compete in the 6-40 millimeters range. In 2010, the largest domestic rebar producers were Evraz Group (29.3%), Mechel (27.8%), NLMK-Long steel (20.3%) and Severstal (6.2%). From August 14, 2007 to December 31, 2010, the Russian domestic market for rebar was protected from Ukrainian imports by an import quota. The quota had been imposed by agreement between Russia and Ukraine as the result of a review of the countervailing import tariff which was in force until July 14, 2007. The agreement expired on January 1, 2011.

Wire rod There were five major producers of wire rod in Russia in 2010: Mechel (39.8%), Evraz Group (19.2%), NLMK-Long steel (14.7%), Severstal (13.8%) and MMK (12.4%).

OEMK, an electric arc furnace steel mill specializing in long carbon and specialty steel products and our nearest specialty steel competitor, is located in the southwest of Russia and serves customers in the pipe, engineering and ball-bearing industries.

According to Metal Expert and Chermet, we were one of the leading producers in Russia of specialty long steel products (bearing, tool, high-speed and stainless steel) in 2010, producing 14.8% of the total Russian output by volume, and we had significant shares of Russian 2010 production volumes of stainless long products (41.7%), tool steel (32.0%) and high-speed steel (58.7%).

Raw materials

The principal raw materials we use in the making of steel are coke (produced from coking coal), iron ore, nickel, ferrous scrap and limestone. We process coking coal concentrate into coke at Mechel-Coke, located in the Urals, and at Moscow Coke and Gas Plant, which we acquired in 2006. In 2010, our production facilities used 4.8 million tonnes of coking coal concentrate (including 3.3 million tonnes used by Mechel-Coke and 1.5 million tonnes used by Moscow Coke and Gas Plant), and 65% of total usage was sourced internally. Coke is used both in pig iron production at Chelyabinsk Metallurgical Plant and in our ferroalloys production. In 2010, we produced and internally used approximately 2.6 million tonnes of coke in our production facilities and produced and sold another approximately 1.3 million tonnes of coke to third parties.

The principal raw materials we use in pig iron production are iron ore products (sinter of our own production and purchased oxidized pellets), coke and limestone. Pig iron is made in blast furnaces. For sinter production we use iron ore concentrate. In 2010, our steel-making operations used 6.3 million tonnes of iron ore feed, approximately 34% in the form of pellets and 66% in the form of sinter, and we internally sourced 8.6% of our total iron ore concentrate requirements during this period. Korshunov Mining Plant supplied our

Table of Contents

steel segment with 539 thousand tonnes of iron ore concentrate in 2010. Iron ore concentrate is converted into sinter at Chelyabinsk Metallurgical Plant. We purchase most of the remaining part of our iron ore feed from Russian domestic suppliers such as Karelsky Okatysh and Vysokogorsky GOK under annual contracts with monthly adjustments of prices and volumes, and Mikhailovsky GOK under monthly and quarterly contracts on market terms.

We produce 62% of steel in basic oxygen furnaces. In steel making, ferrous scrap is used in the composition of feedstock, and we are approximately 20% self-sufficient in this raw material, which amounts to 431,010 tonnes of scrap, sourcing the balance from various scrap traders. We generate our own scrap supply through Metals Recycling, a Chelyabinsk-based metal scrap processing company, which we acquired in March 2006. In addition, Mechel Trading House has a separate business unit in Chelyabinsk through which it purchases scrap metal from third-party suppliers and sells it to the companies within our group.

In 2010, we used nickel sourced from Norilsk Nickel and Ufaleynickel in the production of stainless and other specialty steels. In 2010 our production facilities used 6,702 tonnes of nickel (including 3,885 tonnes at Chelyabinsk Metallurgical Plant, 1,609 tonnes at the Chelyabinsk branch of Urals Stampings Plant and 1,208 tonnes at Izhstal) of which 62% was supplied by ferronickel produced at Southern Urals Nickel Plant and 38% was purchased from third parties.

In 2010, our production facilities used 27,319 tonnes of ferrosilicon (including 25,949 tonnes at Chelyabinsk Metallurgical Plant, 385 tonnes at the Chelyabinsk branch of Urals Stampings Plant and 985 tonnes at Izhstal), almost all of which was supplied by Bratsk Ferroalloy Plant.

In 2010, our production facilities used 28,530 tonnes of ferrochrome (including 21,290 tonnes at Chelyabinsk Metallurgical Plant, 1,562 tonnes at the Chelyabinsk branch of Urals Stampings Plant and 5,677 tonnes at Izhstal) of which 67% was supplied by Tikhvin Ferroalloy Plant and 33% was purchased from third parties.

We internally source all of our limestone requirements from our Pugachev quarry. In 2010, we used approximately 1.3 million tonnes of limestone in the production of steel.

Steel-making requires significant amounts of electricity to power electric arc furnaces and rolling mills and to convert coal to coke. In 2010, our steel and ferroalloy operations consumed approximately 4.4 billion kWh of electricity, of which 2.1 billion kWh was used at Chelyabinsk Metallurgical Plant, 2.3 billion kWh was used at other Russian facilities and 0.8 billion kWh was used at our Eastern European plants. Chelyabinsk Metallurgical Plant, Moscow Coke and Gas Plant and Mechel-Energo have power co-generation facilities, which produced 1.9 billion kWh of electricity for internal consumption in 2010, yielding 27% self-sufficiency overall for our group (including mining operations), which consumed 6.8 billion kWh of electricity in 2010. The balance was purchased from local utilities. Aside from Southern Kuzbass Power Plant and Toplofikatsia Rousse, which run on steam coal, our power-generating facilities work on blast furnace and coke gas, which are by-products of our steel-making operations, and natural gas, which we purchase from Gazprom. In 2010, we consumed 2,480.6 million cubic meters of blast furnace gas, 550.7 million cubic meters of coke gas and 1,050.4 million cubic meters of natural gas. In 2010 Southern Kuzbass Power Plant and Toplofikatsia Rousse consumed 1.8 million tonnes of steam coal sourced both from our own coal mining assets and from third parties.

Large amounts of water are also required in the production of steel. Water serves as a solvent, accelerator and washing agent. Water is used to cool the steel, to carry away waste, to help produce and distribute heat and power and to dilute liquids. One of the principal sources of water is rivers, and many of our facilities recirculate a portion of water used for their production needs. For example, Chelyabinsk Metallurgical Plant sources 8.2% of its water needs from a local river and the rest from recycled water. Vyartsilya Metal Products Plant sources 100% of its water needs from a local river. Southern Urals Nickel Plant sources 34.8% of its water needs through recycling, 65.2% from a

local river. Mechel Targoviste sources 2% of its production water needs from a local river and the rest is recycled/recirculated water. To date, water consumption from local rivers has not resulted in any significant environmental issues, although we make no

Table of Contents

assurances that such issues will not arise in the future. The companies effect payments for the use of water resources and we believe their emissions and discharges are within the permissible limits.

Transportation costs are a significant component of our production costs and a factor in our price-competitiveness in export markets. Rail transportation is our principal means of transporting raw materials from our mines to processing facilities and products to domestic customers and to ports for shipment overseas. For a description of our railway freight and forwarding subsidiary, see Mining Segment Marketing and distribution above.

For a description of how seasonal factors impact our use and reserve levels of raw materials see Item 5. Operating and Financial Review and Prospects Trend Information.

Trade restrictions

Trade restrictions in the form of tariffs, duties and quotas are widespread in the steel industry. However, we are less exposed than most other Russian steel producers to these trade restrictions as restrictions on Russian exports have mainly been directed against flat products, whereas most of our exports consist of long products, such as wire rods and rebar. In addition, the abolition by the Russian government of steel export duties in 2002 has also effectively improved exports of Russian steel. In the future the Russian government may restore export duties on steel products and may also impose export duties on some raw materials, such as coal and iron ore concentrate. See Item 3. Key Information Risk Factors Risks Relating to Our Business and Industry We face numerous protective trade restrictions in the export of our steel products and ferroalloys, and we may face export duties in the future.

In 2010, approximately 2.1% of our steel segment export sale revenues were derived from sales of steel products that were subject to import restrictions. We describe below the main applicable trade restrictions in our key markets.

European Union

Our steel sales to the European Union in 2010 were approximately \$940.5 million, or 16.8% of our total steel segment revenues. The Russian government and the European Union have an export quota system in place whereby Russian exports to the European Union are limited to certain stipulated quantities for each product category. The quota by product category is distributed among Russian producers based on a procedure jointly developed by the Ministry of Economic Development and Trade of the Russian Federation and the Ministry of Industry and Energy of the Russian Federation. Effective as of May 13, 2008, these ministries have been reorganized into the Ministry of Economic Development and the Ministry of Industry and Trade, respectively, with the old Ministry of Industry and Energy's energy functions being transferred to a new Ministry of Energy and the trade functions of the old Ministry of Economic Development and Trade being transferred to a new Ministry of Industry and Trade. The procedure provides that for each product category, a company's export quota allocation is calculated on the basis of shipments by the company of the particular product over the previous years to the E.U. market (which is given a 70% weight), and on the company's market share in domestic production of the particular product (which is given a 30% weight). After the quotas are calculated, the Russian Ministry of Industry and Trade confirms quota allocations and issues export licenses for these quotas. In 2010, the quota covered approximately 8.9% of our steel segment products exported to the European Union.

In 2010, the total E.U. quota for Russian steel was 3,370 thousand tonnes. Initially, we received 335.4 thousand tonnes of the total quota and after the quota was redistributed, in accordance with the export quota system, our part in the quota was increased to 372.6 thousand tonnes. We have used 36% of our individual quotas both in long and flat steel products. The European Union-Russia Steel Agreement for 2011 provides for the total Russian quota to be 3,264 thousand tonnes. Our quota is set at approximately 347.2 thousand tonnes, which includes 21.5 thousand tonnes for flat products and 325.7 thousand tonnes for long products. Our supply of wire rod to Mechel Nemunas, our wire

products plant in Lithuania, and to our Romanian subsidiary Mechel Campia Turzii is also subject to the E.U. export quota system, and our quota for those supplies is 113.6 thousand tonnes for 2011.

Table of Contents

In addition, an antidumping E.U. import duty in the amount of 50.7% was applicable to steel ropes and cables manufactured by our Beloretsk Metallurgical Plant until October 2007. After a review procedure conducted by the European Union in October 2007, this duty was reduced to 36.2% and imposed for a period of five years.

United States

The United States has a quota system in place with respect to imports of hot rolled flat-rolled carbon quality steel and thick steel plate. Intergovernmental quota agreements provide for quotas and reference prices on Russian exports of these products to the United States. A distribution of quotas between specific Russian producers and the execution of export licenses is carried out in accordance with the same procedure that applies to exports to the E.U. market. There are no trade restrictions applicable to the export of our Romanian or Lithuanian products to the United States.

Ferroalloys Segment

Our ferroalloys segment produces and sells low-ferrous ferronickel, ferrochrome and ferrosilicon produced at Southern Urals Nickel Plant, Tikhvin Ferroalloy Plant and Bratsk Ferroalloy Plant, respectively. The following table sets our production volumes for each of our ferroalloy segment products.

	2010	2009	2008
	(In thousands of tonnes)		
Ferrosilicon	89.9	86.0	91.3
Ferrochrome	81.4	82.6	58.5
Nickel	16.8	15.6	16.2

Description of key products

Ferrosilicon. Ferrosilicon is used in ferrous metallurgy as a deoxidizer or as an alloying element for production of electrotechnic, spring wire, corrosion-resistant and heat resistant steel grades, or as a pig iron modifier. In nonferrous metallurgy, ferrosilicon is used as a reducing agent for production of nonferrous metals and alloys. We produce two types of ferrosilicon: with 65% and 75% silicon content in the alloy. The ferrosilicon we produce is a high-C ferrosilicon, which contains 0.1% carbon. We offer our customers ferrosilicon from our Bratsk Ferroalloy Plant.

Low-ferrous ferronickel. Low-ferrous ferronickel is an alloy of iron and nickel used in production of corrosion-resistant and heat resistant steel grades. Southern Urals Nickel Plant offers low-ferrous ferronickel to export customers, as well as to a number of companies within Russia and within our group.

Ferrochrome. High-carbon ferrochrome is used in the iron industry to alloy construction steel and heat-resistant and stainless steels. We produce high-carbon ferrochrome at our Tikhvin Ferroalloy Plant and we use it internally within our group and export and sell within Russia.

Mining and manufacturing processes

Nickel ore. Both the Sakhara and Buruktal mining operations run by our Southern Urals Nickel Plant are typical of Russian open pit mines of their size. The weathered lateritic ore and overburden (the layers of soil covering the ore-bearing stratum) are loaded by electric and diesel shovels and dragline into haul trucks without any drilling or blasting. The ore is stockpiled, reclaimed and then loaded into railcars for shipment to Southern Urals Nickel Plant. Overburden waste is hauled to dumping locations inside the mined-out pits whenever possible or placed in dumps

adjacent to the pit.

Low-ferrous ferronickel. Nickel ores from both mines are transported by rail to our nickel production plant in Orsk, which lies east of the southern extremity of the Ural Mountains, close to the border with Kazakhstan. At this plant, ores are mixed in a ratio of 70% of Buruktal ore and 30% of Sakhara ore and sintered in sintering machines. Sinter with the addition of coke, sulfur pyrite and limestone is smelted in shaft furnaces that produce matte. This matte is then divided into converter matte and waste slag in horizontal

Table of Contents

converters. Converter matte is processed into nickel monoxide and nickel monoxide is further processed into ferronickel. Ferronickel is shipped by rail transportation from Orsk station, as well as by motor transport, to our Chelyabinsk Metallurgical Plant, to other Russian customers and for international delivery.

Ferrosilicon. Ferrosilicon is produced in electric arc furnaces in a continuous ore smelting process. Silicon is reduced from quartzite with coke and coal carbon and alloyed with steel cutting iron. Ferrosilicon is discharged from the furnace periodically. After cooling, metal ingots are split and sorted into various commercial fractions.

Ferrochrome. High-carbon ferrochrome is produced in electric arc furnaces in a continuous ore smelting process. Chrome and iron are reduced from chrome ore concentrate with coke carbon, with over 7% of the carbon being dissolved in this alloy. High-carbon ferrochrome is discharged from the furnace periodically. After cooling, metal ingots are split and sorted into various commercial fractions.

Nickel ore and nickel production

Southern Urals Nickel Plant produces nickel in Orsk in the Orenburg region, in the southern part of Russia's Ural Mountains, and operates two open pit nickel ore mines, Sakhara and Buruktal. The Sakhara mine is located east of the Ural Mountains in the Chelyabinsk region, about 370 kilometers north of Orsk. The Buruktal mine is located east of the southern tip of the Ural Mountains, in the Orenburg region, close to the border with Kazakhstan. It is located 230 kilometers east of Orsk. Both the Buruktal and Sakhara mines have railway spurs connected to the Russian rail system, which is controlled by Russian Railways. We acquired Southern Urals Nickel Plant in 2001.

The table below sets forth the subsoil licenses used by our nickel mines and the expiration dates thereof.

License Area	License Holder	License Expiry Date	Status	Area (sq. km)	Year Production Commenced
Buruktal	Southern Urals Nickel Plant	December 2012	In production	11.9	1969
Sakhara	Southern Urals Nickel Plant	April 2013	In production	2.2	1994

The following table summarizes our nickel ore and nickel products production for the periods indicated:

	2010		2009		2008	
	Tonnes	Grade (% Ni)	Tonnes	Grade (% Ni)	Tonnes	Grade (% Ni)
	(In thousands of tonnes)⁽¹⁾					
Sakhara ore production	845.3	1.00%	964.5	1.00%	1,025.7	1.07%
Buruktal ore production	2,014.3	1.06%	1,679.3	1.07%	1,436.4	1.05%
Total ore production	2,859.6	1.04%	2,643.8	1.04%	2,462.1	1.06%
Nickel production	16,798.6		15,565.0		16,158.0	

(1) Volumes are reported on a wet basis.

Chrome ore and silicate nickel ore production

Through our acquisition of Oriel Resources in April 2008, we acquired a 100% interest in the Voskhod chrome project (**Voskhod**) and a 90% interest in the Shevchenko nickel project (**Shevchenko**), both located in northwestern Kazakhstan. In January 2009, we acquired the remaining 10% interest in Shevchenko, giving us a current 100% interest in both Voskhod and Shevchenko.

Oriel Resources holds two licenses to mine chrome ore at the Voskhod deposit in the Aktyubinsk region and silicate nickel ore at the Shevchenko deposit in the Kustanay region, and owns a processing plant located near the Voskhod underground mine.

Voskhod is located in the Chrometau district of the Aktyubinsk region 110 kilometers east of Aktobe and seven kilometers northeast of Chrometau. The site is accessed by road from Chrometau, which lies on the

Table of Contents

highway from the regional center of Aktobe. Associated chrome ore mining commenced at the Voskhod underground mine in December 2008 and ore production in commercial volumes commenced in July 2009. The mining plant is designed to reach output of 1.3 million tonnes of chrome ore and 0.6 – 0.7 million tonnes of chromite ore concentrate per annum. Chrome ore concentrate from Voskhod is used in the Tikhvin Ferroalloy Plant in Russia, which is another asset acquired in 2008 as part of Oriel Resources. The subsoil license relating to the chrome deposit at Voskhod was issued by the Government of Kazakhstan in 2004 for a period of 25 years.

The Shevchenko deposit of silicate nickel ore is located in Kazakhstan's Kustanay region and we plan to produce nickel ore there using the in-situ leaching method for further processing into nickel-containing marketable products. The subsoil license relating to the silicate nickel ore deposit at Shevchenko was issued by the Government of Kazakhstan in 1997 for a period of 20 years. Shevchenko is a development stage mineral asset without reportable reserves. Currently, relevant engineering studies are being undertaken.

The table below sets forth the subsoil licenses used by our chrome ore and silicate nickel ore properties and the expiration dates thereof.

License Area	License Holder	License Expiry Date	Status	Area (sq. km)	Year Production Commenced
Voskhod	Voskhod-Oriel	October 2029	In production	1.54	2008
Shevchenko	Kazakhstansky Nickel Mining Company	March 2017	Feasibility study	103.8	n/a

Quartzite production

Bratsk Ferroalloy Plant holds the license for the exploration and mining of the Uvatskoye deposit of quartzite and quartzite sandstones, a raw material for ferrosilicon production. The deposit is accessible by unpaved road and located 20 km southwest of Nizhneudinsk in the Irkutsk region. After completion of additional exploration at the deposit in 2011, we plan to start mining quartzite to be supplied to our Bratsk Ferroalloy Plant.

The table below sets forth the subsoil license held in respect of our quartzite project and the expiration date thereof.

License Area	License Holder	License Expiry Date	Status	Area (sq. km)	Year Production Commenced
Uvatskoye	Bratsk Ferroalloy Plant	July 2033	Exploration	18.21	n/a

Ferroalloy production facilities***Southern Urals Nickel Plant***

Southern Urals Nickel Plant includes a sinter plant equipped with five sintering machines; a melting workshop equipped with eight shaft furnaces and 14 thirty-tonne converters; and a roasting workshop equipped with two electric arc furnaces with a capacity of 12 megawatts each. The plant can produce up to 17,500 tonnes per year of low-ferrous ferronickel in pure nickel equivalent.

The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for Southern Urals Nickel Plant's principal production area.

Production Areas	Capacity in 2010	Capacity Utilization Rate in 2010	Planned Increase (2011-2013)
	(In thousands of tonnes, except for percentages)		
Low-ferrous ferronickel production	17.4	96.3%	1

Southern Urals Nickel Plant produced 16,799 tonnes of nickel in 2010.

Table of Contents*Bratsk Ferroalloy Plant*

Bratsk Ferroalloy Plant is the largest enterprise in Eastern Siberia producing high grade ferrosilicon. Ferrosilicon is used in the steel-making industry for manufacturing carbon and stainless steel deoxidizers of most kinds of steel grades or alloying elements for production of insulating, acid-proof and heatproof steel grades, or pig iron modifier, as well as reducing agents for production of nonferrous metals and alloys. Approximately 5-6 kg of ferrosilicon is used in every tonne of steel produced. Ferrosilicon is a primary raw material for alloyed steels produced by Chelyabinsk Metallurgical Plant. We acquired Bratsk Ferroalloy Plant in 2007.

The main production facilities of the plant include four ore-thermal ovens with a capacity of 25 megavolt-amperes. In October 2010 we signed contracts with Siberian Plant of Electrothermal Equipment (Sibelectrotherm JSC, Novosibirsk) for the supply of four ore-thermal ovens with the capacity of 33 MVA each to replace the existing ovens. After the project's completion Bratsk Ferroalloy Plant's production capacity will increase by 30% and its power consumption will be reduced by 10-13%. The contracts' total value exceeds 1.9 billion rubles. The reconstruction will take place during 2011-2012.

The following table sets forth the capacity, the capacity utilization rate and the planned increase in capacity for Bratsk Ferroalloy Plant's principal production area.

Production Areas	Capacity in 2010	Capacity Utilization Rate in 2010	Planned Increase (2011-2013)
	(In thousands of tonnes, except for percentages)		
Ferrosilicon production	87.2	102.7%	34.8

Bratsk Ferroalloy Plant produced 89,920 tonnes of ferrosilicon in 2010.

Tikhvin Ferroalloy Plant

Tikhvin Ferroalloy Plant is a modern metallurgical enterprise, which specializes in the production of high-carbon ferrochrome from chrome ore for use predominantly in the production of stainless steel. Recovery of chrome from chrome ore occurs by the agency of metallurgical coke in the presence of a quartzite flux. The plant is situated in the small town of Tikhvin, 200 kilometers southeast of St. Petersburg, Russia. It comprises four ore-smelting open electric AC furnaces with gasproof enclosure and a total capacity of 22.5 megavolt-amperes each. For effective cleaning of a steam-and-gas mixture, four dry gas cleaning plants with pulsed regeneration are used at the plant. The Tikhvin Ferroalloy Plant's annual capacity is 140,000 basic tonnes of high-carbon ferrochrome. The plant commenced production in April 2007 using imported chrome ore. Since April 1, 2009, the plant has moved to high-carbon ferrochrome production using only concentrate from the Voskhod chrome processing plant. The plant consumes 330,000 tonnes of chromite ore concentrate per annum.

Sales of ferroalloy products

The following table sets forth our revenues by primary ferroalloys segment product categories (including as a percentage of total ferroalloys segment revenues) for the periods indicated. Ferroalloys segment sales data presented in Ferroalloys Segment do not include intersegment sales.

Revenues	2010		2009		2008	
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
(In millions of U.S. dollars, except for percentages)						
Nickel ⁽¹⁾	251.6	55.3%	190.6	52.4%	281.3	64.8%
Ferrosilicon	91.8	20.2%	66.6	18.4%	79.3	18.2%
Ferrochrome	93.6	20.6%	92.8	25.5%	68.2	15.7%
Other	18.2	4.0%	13.7	3.7%	5.2	1.3%
Total	455.2	100%	363.7	100%	434	100%

(1) Sales of nickel contained in ferronickel and converter matte.

Table of Contents

The following table sets forth by percentage of sales the regions in which our ferroalloys segment products were sold for the periods indicated.

Region⁽¹⁾	2010	2009	2008
Russia	24.2%	14.6%	23.0%
Other CIS	1.3%	1.7%	0.1%
Europe	61.5%	69.6%	74.4%
Asia	8.8%	12.3%	1.4%
Middle East	0.1%	0.0%	0.0%
United States	4.0%	1.5%	1.1%
Other	0.2%	0.3%	0.0%
Total	100%	100%	100%

(1) The regional breakdown of sales is based on the geographic location of our customers, and not on the location of the end users of our products, as our customers are often distributors that resell and, in some cases, further export our products.

In 2010, our ferroalloys segment sales outside of Russia were principally to Europe. Sales in Europe accounted for 61.5% of our total ferroalloys segment sales. The following table sets forth information about the five largest customers of our ferroalloys segment products, which together accounted for 60.5% of our ferroalloys segment sales in 2010.

Customer	% of Total Ferroalloys Segment Sales	Product	% of Total Products Sales
Outokumpu Rossija Oy	32.6%	Nickel	58.9%
Glencore	14.2%	Nickel	25.7%
Scanalloys, Ltd.	7.3%	Chrome	34.0%
		Ferrosilicon	1.7%
Stratton Metals, Ltd.	3.2%	Nickel	5.8%
Severstal	3.2%	Ferrosilicon	16.0%

Table of Contents

The following table sets forth information on our domestic and export sales of our primary ferroalloys categories for the periods indicated. We define exports as sales by our Russian and foreign subsidiaries to customers located outside their respective countries. We define domestic sales as sales by our Russian and foreign subsidiaries to customers located within their respective countries. See note 23 to our consolidated financial statements.

Products	2010	2009	2008
	(In millions of U.S. dollars, except for percentages)		
Nickel ⁽¹⁾	251.6	190.6	281.3
Domestic Sales	7.4%	2.6%	6.6%

Export	77.9%	86.8%	76.8%

(1) Sales of nickel contained in ferronickel and converter matte.

Marketing and distribution*Domestic sales*

Nickel is supplied to the Russian domestic market, primarily within our group. Only 7.4% of total nickel revenues were received from domestic sales in 2010.

In 2010, ferrosilicon was sold to Russian domestic consumers such as Severstal OAO, OEMK OAO and TMZ TD, which together accounted for 43.2% of the total ferrosilicon sales by revenue and 8.7% of the total ferroalloys segment revenues.

Volgograd Metallurgical Works Red October was our major domestic ferrochrome customer in 2010, which accounted for 2.5% of the total ferrochrome sales and 0.5% of the total ferroalloys segment revenues.

Mechel Trading House sells ferroalloy products produced by Bratsk Ferroalloy Plant, Southern Urals Nickel Plant and Tikhvin Ferroalloy Plant to third-party customers.

We supply ferroalloys products to the Russian market under annual contracts with monthly adjustment of prices and volumes. Price adjustments are based on the domestic spot market prices.

Export sales

Export sales together accounted for 92.7% of our total ferronickel sales and 51.2% of our total ferroalloys segment revenues. All of our ferronickel export sales in 2010 were delivered to six customers: Outokumpu Rossija Oy, Glencore International AG, Stratton Metals Ltd., A&M Trading, Outokumpu Stainless Ltd. and DEMZ AO. Prices are settled on the basis of nickel prices quoted by the London Metal Exchange (LME), less a certain discount. The ferronickel is delivered by railway from Southern Urals Nickel Plant to either the port of St. Petersburg or to the Russian-Finnish border.

Table of Contents

In 2010, ferrosilicon export sales were delivered to such customers as ACTS Trading Corporation, Mitsui, Hyundai Steel and Scanalloys Ltd., which together accounted for 22.6% of our total ferrosilicon sales by revenue and 4.6% of our total ferroalloys segment revenues. Deliveries to Japanese and South Korean customers were effected on CIF delivery terms (including transportation by railway, handling in ports of Vanino and Vostochny and chartering vessels to major Japanese and Korean ports and insurance). We mostly sell ferrosilicon on spot basis.

In 2010, ferrochrome was supplied to Europe, Asia and the United States mainly through such trading and production companies as Scanalloys Ltd., Marubeni, DCM DECOMetal GmbH and Hascor. Those sales together accounted for 60.9% of our total ferrochrome sales and 12.5% of the total ferroalloys segment revenues. Ferrochrome was delivered mainly by railway to the port of St. Petersburg, and small tonnages were delivered to Eastern Europe by trucks. We mostly sell ferrochrome on spot basis.

Market share and competition

According to Metal Expert, Mechel is the second largest Russian producer of ferrosilicon and the third largest producer of ferrochrome by volume. In 2010, we had a 15.8% market share by volume of both Russian ferrosilicon and ferrochrome production.

Following is a brief description of Russia's other largest ferroalloys producers, according to Metal Expert and the companies' data:

Kuznetsk Ferroalloys OAO is the largest Russian ferrosilicon producer, with a 53.5% market share by production volume in 2010. It controls Yurginsk Ferroalloys Plant OAO. Kuznetsk Ferroalloys produces microsilica and quartzite. It is primarily export-oriented, having exported 96.7% of its ferrosilicon production volume in 2010.

Chelyabinsk Electro-Metallurgical Plant OAO (ChEMK) is the largest Russian ferrochrome producer, with a 46.4% market share by production volume in 2010. It is also the third largest ferrosilicon producer with a 14.8% production share in 2010. In addition it produces silicomanganese and silicocalcium. ChEMK exports most of its production. In 2010, it exported 92.6% and 42.3% by volume of its ferrochrome and ferrosilicon production, respectively.

Serov Ferroalloys Plant OAO (Serov) is the second largest Russian ferrochrome producer, with a 36.7% market share by production volume in 2010. It also produces ferrosilicon, having a 7.0% production share in 2010. The plant is controlled by the industrial group ENRC, which is one of the largest ferrochrome producers in the world, according to CRU. Serov also produces ferrosilicochrome. Serov exported 83.2% of its ferrochrome production volume in 2010, and almost all of the ferrosilicon it produced in 2010 was supplied domestically.

The following tables set forth additional information regarding our 2010 market shares in Russia for certain ferroalloy products.

Ferroalloys Ferrosilicon

Manufacturer	Region	Production	Market Share by Production Volume, %
	(In thousands of tonnes, except for percentages)		

Kuznetsk Ferroalloys OAO	Kemerovo	303.5	53.5%
Bratsk Ferroalloy Plant OAO	Irkutsk	89.9	15.8%
Chelyabinsk Electro-Metallurgical Plant OAO	Chelyabinsk	84.3	14.8%

Mineral reserves (ferroalloys)

Please see Mining Segment Mineral reserves (coal, iron ore and limestone) for a general description of our reporting of proven and probable reserves. We retained Marston & Marston, Inc. to conduct an independent review of our mineral resources and reserves (nickel). Marston & Marston is a U.S. based mining engineering firm qualified to conduct reviews and prepare technical reports on mineral resources and reserves.

Nickel ore

As of December 31, 2010, we had nickel ore reserves (proven and probable) totaling 76.3 million tonnes at an average nickel grade of 1.03%. The table below summarizes our nickel ore reserves by mine.

Nickel Ore Reserves⁽¹⁾⁽²⁾⁽³⁾	Within Subsoil License Term	Outside Subsoil		Grade (% Ni)⁽⁵⁾
		License Term	Total	
Sakhara	1.9		1.9	1.00
Buruktal	3.0	71.4	74.4	1.04
Total	4.9	71.4	76.3	1.03

(1) Reserve estimates use the tonnages that are expected to be mined, taking into account dilution and losses.

(2) We own 84.1% of Southern Urals Nickel Plant mines. Reserves are presented for the mines on an assumed 100% ownership basis.

(3) In estimating our reserves we use an average price of \$20,858 per tonne of nickel and currency conversions are carried out at average official exchange rates of the Central Bank of Russia.

- (4) Volumes are reported on a dry basis.
- (5) Metallurgical recovery is projected to be 89.5%.

Chrome ore

At December 31, 2010 Voskhod has total proven and probable reserves of 17.4 million tonnes including 0.4 million tonnes of proven and 17.0 million tonnes of probable reserves at an average grade of 42.1% Cr₂O₃ with projected recovery of rate of 73%. In estimating our reserves we use an average contract price of \$338 per tonne of chrome ore concentrate and currency conversions are carried out at average official exchange rates of the Central Bank of Kazakhstan.

Trade restrictions

In February 2008, an antidumping duty in the amount of 17.8% was imposed on exports to the European Union of ferrosilicon produced by our Bratsk Ferroalloy Plant for a period of five years.

Table of Contents**Power Segment**

Our power segment generates and sells electricity to our group companies and to external customers. It enables us to market higher value-added products made from our steam coal, such as electricity and heat energy, and to increase the electric power self-sufficiency of the mining and steel segments of our business. Our power segment consists of a power generating plant, Southern Kuzbass Power Plant with installed capacity of 554 MW, power generation facilities at Chelyabinsk Metallurgical Plant, Moscow Coke and Gas Plant and Urals Stampings Plant with installed capacity of 229 MW, 30 MW and 3.5 MW, respectively, and a power sales company, Kuzbass Power Sales Company. Our subsidiary Mechel-Energo manages our power business. We also hold a 100% stake interest in Toplofikatsia Rouse, a power plant in Bulgaria. Below is a brief description of each of these facilities.

The following table sets out total volumes of electricity production by our power segment.

	2010	2009	2008
	(In million kWh)		
Electricity	4,019.6	3,487.7	4,088.8

Southern Kuzbass Power Plant

The Southern Kuzbass Power Plant is located in Kaltan in the Kemerovo region, which is south of Russia's coal-rich Kuzbass district. It has a total installed capacity of 554 MW and installed heat capacity of 506 Gcal/h as of December 31, 2010. The electricity output of the plant for the year ended December 31, 2010 was 2,157.6 million kWh. The heat power generated by the plant for the year ended December 31, 2010 was 814.2 thousand Gcal. We acquired Southern Kuzbass Power Plant in 2007.

The Southern Kuzbass Power Plant uses steam coal as fuel, which is supplied to it from local sources, including our Southern Kuzbass Coal Company. In 2010, it consumed 1.5 million tonnes of steam coal sourced from Southern Kuzbass Coal Company.

The generation facilities of the Southern Kuzbass Power Plant are listed below.

Generation Unit No.	Year of Manufacture	Month and Year of Commissioning at Southern Kuzbass Power Plant	Installed Capacity (MW)	Electricity Production in 2010 (million kWh)
VK-50-2 LMZ	1950	April 1951	53	93.7
VK-50-2 LMZ	1950	November 1951	53	153.9
VK-50-2 LMZ	1950	August 1952	53	208.4
VK-50-2 LMZ	1952	February 1953	53	260.1
T-115-8,8 LMZ	1996	December 2003	113	372.3
T-88/106-90 LMZ	1953	July 1954	88	429.5
VK-50-2 LMZ	1954	December 1954	53	181.6
T-88/106-90 LMZ	1953	September 1956	88	458.1

Total	554	2,157.6
-------	-----	---------

The plant sells electricity and capacity on the wholesale market only, as well as heat energy directly to consumers. In Russia it is common for thermal power plants to produce and sell heat energy, sometimes in the form of industrial steam and sometimes in the form of hot water, for business and residential heating and household use, which is distributed in towns and cities by a network of hot water distribution pipes. Southern Kuzbass Power Plant's heat energy is distributed at regulated prices in the form of hot water in Kaltan and Osinniki.

Kuzbass Power Sales Company

Kuzbass Power Sales Company is located in the Kemerovo region and is the largest power distributing company in the Kemerovo region. Its marketed power volume in 2010 amounted to 10.6 billion kWh. We acquired Kuzbass Power Sales Company in 2007. The addition of Kuzbass Power Sales Company, along with

Table of Contents

Southern Kuzbass Power Plant, allows us to improve the utilization of our existing power co-generation capabilities and provides a base for growth in the power industry.

Kuzbass Power Sales Company sells electricity on the retail market. The company sells electricity to households, to social infrastructure companies, housing and public utilities and large industrial companies. Due to its area of operation, its primary industrial customers are in the mining and processing industries. It supplies electricity to end-consumers directly and also through three regional agents.

The company is included in the Register of Guaranteeing Suppliers of the Kemerovo region. For a discussion of guaranteeing suppliers, see [Regulatory Matters](#) [Regulation of Russian Electricity Market](#) [Sales of electricity](#) [Retail electricity market](#).

Toplofikatsia Rousse

Toplofikatsia Rousse is a power plant located on the bank of the Danube River in close proximity to the harbor of Rousse, Bulgaria. We acquired a 49% stake in Toplofikatsia Rousse in December 2007. We increased our stake in Toplofikatsia Rousse to 100% in December 2010. Toplofikatsia Rousse comprises thermal power plant Toplofikatsia Rousse Izstok and thermal networks in Rousse. Currently, one of the plant's power generating units with capacity of 110 MW is under reconstruction and the plant's utilized capacity amounts to 290 MW, which is below its installed capacity of 400 MW. Pursuant to our capital investment program, we are upgrading the equipment at Toplofikatsia Rousse to fully utilize its installed capacity and to meet European environmental standards. The plant has a total heat capacity of 554 Gcal/h and uses steam coal as fuel, most of which is supplied from our coal mines in Russia. The plant had 353 employees as of December 31, 2010.

Mechel-Energo

Mechel-Energo's core activity is the generation and sale of electricity, capacity, and heat energy in the form of hot water and steam. In addition, it coordinates the supply of energy to our production facilities. The company has separate business units in the cities of Izhevsk and Chebarkul, as well as branches in the cities of Mezhdurechensk, Chelyabinsk, Beloretsk and Vidnoye. Mechel-Energo also performs the functions of the respective executive management bodies of its subsidiaries: Southern Kuzbass Power Plant and Kuzbass Power Sales Company.

Mechel-Energo supplies heat energy (in the form of hot water and steam) at regulated prices to its consumers, including residential consumers and commercial customers, of the cities of Vidnoye, Chelyabinsk, Chebarkul, Beloretsk, Guryevsk, Mezhdurechensk, Myski and Izhevsk.

Mechel-Energo has cogeneration facilities and operates using mainly blast furnace gas and coke oven gas, which is a byproduct of steelmaking, and natural gas, which we purchase from Gazprom.

Mechel-Energo's sales amounted to 5.3 billion kWh of electricity and 4.5 million Gcal of heat energy in 2010.

Capital Investment Program

Our capital investment program includes capital spending of up to \$4.7 billion for the three-year period of 2011-2013. Our capital investment program is primarily targeted at expanding the mining segment and increasing the efficiency of the steel segment. The split is approximately \$3.3 billion in mining, approximately \$1.1 billion in steel, approximately \$141 million in ferroalloys and approximately \$145.7 million in the power segment. However, our ability to fully realize our capital investment program is constrained by our ability to generate cash flow, obtain additional financing and refinance or restructure existing indebtedness. Attracting debt financing for our capital expenditures on

commercially reasonable terms may be particularly challenging given our current levels of indebtedness. We may be limited to obtaining financing on a project finance basis which may impose more restrictions on the operations of the project or require the economic returns of the project to be shared with investors or lenders.

Table of Contents

We continually review our capital investment program in light of our cash flow, liquidity position, results of operations and market conditions. In light of the above factors, we may adjust our capital investment program. See Item 3. Key Information Risk Factors Risks Relating to Our Financial Condition and Financial Reporting We have a substantial amount of outstanding indebtedness and Item 3. Key Information Risk Factors Risks Relating to Our Financial Condition and Financial Reporting We will require a significant amount of cash to fund our capital investment program.

In the mining segment we expect to direct approximately \$2.1 billion to the development of the Elga coal deposit and construction of a rail branch line in 2011-2013. Investments in Southern Kuzbass Coal Company will amount to \$680.9 million. We will invest approximately \$184 million in 2011-2013 for increasing coal production at Sibirginsk Underground Mine of Southern Kuzbass Coal Company and approximately \$255 million for construction of Erunakovsk-1 Underground Mine. In the iron ore business, we will invest approximately \$42.3 million in Korshunov Mining Plant.

The steel segment projects are targeted at expanding the share of value added products which we produce, while maintaining existing output, and will be mainly focused on Chelyabinsk Metallurgical Plant and Izhstal. The main project, initiated in 2008, is the construction of a universal rail and structural rolling mill aimed at increasing rolling capacity to 1.1 million tonnes and decreasing the proportion of lower-value semi-finished product sales by increasing the production of high quality rolled steel products and rails. Preliminary engineering works have been completed, and an equipment delivery contract and a construction contract have been signed and the project is planned to be completed in 2011.

The following table sets out by segment and facility the major items of our capital expenditures for the three-year period of 2011-2013.

		Approximate Total Planned Expenditures⁽¹⁾	Year of Project Launch	Estimated Year of Completion
	Planned Increase in Capacity and/or Other Improvement	(In millions of U.S. dollars)		
Mining Segment				
Maintenance expenditures	Maintaining current coal and iron ore mining and coal and iron ore concentrate production	418	2011	2013
<i>Yakutugol</i>				
Construction of a rail branch to the Elga coal deposit and the development of the Elga coal deposit	Providing access to and the development of the coal deposit	2,847	2009	2013
<i>Southern Kuzbass Coal Company</i>				
Increase of coal production at Sibirginsk Underground	Increase production output to 2.4 million tonnes per annum	240.9	2009	2014
Construction of Erunakovsk-1 Underground	Increase of coal production by 4 million tonnes	300	2009	2014
<i>Mechel-Coke</i>				
Reconstruction of coking battery No. 5	Design capacity of 470,000 tonnes of coke per annum	62.6	2011	2012
Steel Segment				

Maintenance expenditures	Maintaining current output capacity	168.6	2011	2013
<i>Chelyabinsk Metallurgical Plant</i>				
Construction of rolling facilities in blooming building	Introducing new types of rolled products for construction industry with a design capacity of 1.1 million tonnes per annum	664.9	2009	2011

(1) We estimate that approximately \$604 million of the aforementioned planned expenditures for these projects were made within 2010. In 2010, we spent \$1.0 billion in total for capital expenditures.

Research and Development

We maintain research programs at the corporate level and at certain of our business units to carry out research and applied technology development activities. At the corporate level, we have a Department of Metallurgical Production Technology Development at Mechel-Steel Management (six employees), a Production and Technical Department at Mechel Mining Management (fourteen employees), a Department of Wire Products Technology Development at Mechel-Steel Management (two employees), and a Department of Technical Development at Mechel Ferroalloys Management (four employees). In December 2008, we established Mechel Engineering with a headcount of 122 employees to carry out design and engineering works to increase the efficiency of our mining business. In January 2009, our design unit DVNPU with a headcount of 104 employees was transferred under the management of Mechel Engineering. Since January 1, 2011, DVNPU became a branch of Mechel Engineering.

In the course of our research and development we also contract with third-party consultants and Russian research institutions.

In addition to these activities performed at our corporate level, each of Chelyabinsk Metallurgical Plant, Beloretsk Metallurgical Plant, Southern Urals Nickel Plant, Izhstal, Urals Stampings Plant, Moscow Coke and Gas Plant, Bratsk Ferroalloy Plant and Yakutugol have specialized research divisions with a total of 371 researchers involved in the improvement of existing technologies and products.

Our research and development expenses in the years ending December 31, 2010, 2009 and 2008 were not significant.

Insurance

Most of our Russian production facilities have no comprehensive insurance coverage against the risks associated with the business in which we operate, other than insurance required under the Russian law, existing collective agreements, loan agreements or other undertakings. Our Russian facilities have various compulsory insurance policies: legal liability for pollution, third-party liability motor vehicle insurance, and other forms of insurance. Some of our facilities provide their workers with medical insurance and accident and health insurance in accordance with existing collective employment agreements. In addition, some of our Russian facilities have motor vehicle insurance, property insurance (real property and machinery insurance, goods), third party liability insurance and cargo.

Table of Contents

Some of our international production facilities are not covered by comprehensive insurance typical for such operations in Western countries. However, they all have the compulsory insurance coverage required under the law of their respective jurisdictions: motor vehicle insurance, pollution legal liability insurance, employer liability etc. Furthermore, some of our international production facilities also carry insurance coverage for their property (real property and machinery insurance, goods), liability (third party liability, professional and product liability), cargo (including freight insurance), as well as medical insurance and accident and health insurance for their workers.

Regulatory Matters

Licensing of Operations in Russia

We are required to obtain numerous licenses, authorizations and permits from Russian governmental authorities for our operations. The Federal Law On Licensing of Certain Types of Activities, dated August 8, 2001, as amended, as well as other laws and regulations, set forth the activities subject to licensing and establish procedures for issuing licenses. In particular, some of our companies need to obtain licenses, authorizations and permits to carry out their activities, including, among other things:

- the use of subsoil, which is described in more detail in [Subsoil licensing in Russia](#) below;
- the use of water resources;
- the discharge of pollutants into the environment;
- the handling of hazardous waste;
- storage and use of explosive, flammable and/or dangerous materials;
- operation of industrial facilities featuring fire and explosion hazard (including mining and surveying activities);
- construction;
- fire control and security;
- medical operations;
- transportation activities; and
- collection, processing and sale of ferrous scrap.

These licenses and permits are usually issued for a period of five years and may be extended upon application by the licensee. Licenses for the use of natural resources may be issued for shorter or longer periods. Upon the expiration of a license, it may be extended upon application by the licensee, but usually subject to prior compliance with regulations.

Regulatory authorities maintain considerable discretion in the timing of issuing licenses and permits. The requirements imposed by these authorities may be costly, time-consuming and may result in delays in the commencement or continuation of exploration or production operations. Further, private individuals and the public at large possess rights to comment on and otherwise participate in the licensing process, including through challenges in the courts. For example, individuals and public organizations may make claims or applications to the Federal Agency for Subsoil Use regarding subsoil abuse, damage to the subsoil and general environmental issues. The Federal Agency

for Subsoil Use is required by law to review such claims and applications and to respond to those who file them. The agency can initiate further investigation in the course of reviewing claims and applications, and such investigations can lead to suspension of the subsoil license if the legal grounds for such suspension are identified in the course of the investigation. Additionally, citizens may make claims in court against state authorities for failing to enforce environmental requirements (for example, if a breach by the licensee of its license terms caused damage to an individual's health, legal interests or rights), and pursuant to such a claim the court may order state authorities to suspend the subsoil

Table of Contents

license. Accordingly, the licenses we need may not be issued, or if issued, may not be issued in a timely fashion, or may impose requirements which restrict our ability to conduct our operations or to do so profitably.

As part of their obligations under licensing regulations and the terms of our licenses and permits, some of our companies must comply with numerous industrial standards, employ qualified personnel, maintain certain equipment and a system of quality controls, monitor operations, maintain and make appropriate filings and, upon request, submit specified information to the licensing authorities that control and inspect their activities.

Subsoil Licensing in Russia

In Russia, mining minerals requires a subsoil license from the Federal Agency for Subsoil Use with respect to an identified mineral deposit, as well as the right (through ownership, lease or other right) to use the land where such licensed mineral deposit is located. In addition, as discussed above, operating permits are required with respect to specific mining activities.

The primary law regulating subsoil licensing is the Federal Law On Subsoil, dated February 21, 1992, as amended (the **Subsoil Law**), which sets out the regime for granting licenses for the exploration and production of mineral resources. The Procedure for Subsoil Use Licensing, adopted by Resolution of the Supreme Soviet of the Russian Federation on July 15, 1992, as amended (the **Licensing Regulation**), also regulates the licensing of exploration and production of mineral resources. According to both the Subsoil Law and the Licensing Regulation, subsurface mineral resources are subject to the jurisdiction of the federal authorities.

Among different licenses required for mining minerals in Russia, the two major types of licenses are: (1) an exploration license, which is a non-exclusive license granting the right of geological exploration and assessment within the license area, and (2) a production license, which grants the licensee an exclusive right to produce minerals from the license area. In practice, many of the licenses are issued as combined licenses, which grant the right to explore, assess and produce minerals from the license area. A subsoil license defines the license area in terms of latitude, longitude and depth.

There are two major types of payments with respect to the extraction of minerals: (1) periodic payments for the use of subsoil under the Subsoil Law; and (2) the minerals extraction tax under the Tax Code. Failure to make these payments could result in the suspension or termination of the subsoil license. The Subsoil Law-mandated payments are not material to our mining segment's results of operations. The minerals extraction tax is calculated as a percentage of the value of minerals extracted. Currently the tax rates are 4% for coal, 4.8% for iron ore and 8% for nickel. In 2010, we incurred minerals extraction taxes in the amount of \$41.7 million, which is included in the statement of income and comprehensive income as production related overheads. See note 21 to our consolidated financial statements.

The term of the license is set forth in the license. Prior to January 2000, exploration licenses could have a maximum term of five years, production licenses a maximum term of 20 years, and combined exploration, assessment and production licenses a maximum term of 25 years. After amendments to the Subsoil Law in January 2000 and in August 2004, exploration licenses still have a maximum term of five years; in the event that a prior license with respect to a particular field is terminated early (for example, when a license is withdrawn due to non-usage of the licensed subsoil), a production license may have a one year term until a new licensee is determined, but is generally granted to another user for the term of the expected operational life of the field based on a feasibility study; and combined exploration, assessment and production licenses can be issued for the term of the expected operational life of the field based on a feasibility study. These amendments did not affect the terms of licenses issued prior to January 2000, but permit licensees to apply for extensions of such licenses for the term of the expected operational life of the field in accordance with the amended Subsoil Law. The term of a subsoil license runs from the date the license is

registered with the Russian Federal Agency for Subsoil Use.

Table of Contents

Issuance of licenses

Subsoil licenses are issued by the Federal Agency for Subsoil Use. Most of the currently existing production licenses owned by companies derive from: (1) pre-existing rights granted during the Soviet era and up to the enactment of the Subsoil Law to state-owned enterprises that were subsequently reorganized in the course of post-Soviet privatizations; or (2) tender or auction procedures held in the post-Soviet period. The Russian Civil Code, the Subsoil Law and the Licensing Regulation contain the major requirements relating to tenders and auctions. The Subsoil Law allows production licenses to be issued without a tender or auction procedure only in limited circumstances, such as instances when a mineral deposit is discovered by the holder of an exploration license at its own expense during the exploration phase.

Extension of licenses

The Subsoil Law, as amended in August 2004, permits a subsoil licensee to request an extension of a production license for the term of the expected operational life of the subsoil plot in order to complete the production from the subsoil plot covered by the license or the procedures necessary to vacate the land once the use of the subsoil is complete, provided the user is not in violation of the terms and conditions of the license and the relevant regulations.

In order to extend the period of a subsoil license, a company must file an application with a territorial authority of the Federal Agency for Subsoil Use to amend the license. In addition, as we have seen in our practice, a subsoil licensee may be required to prepare and provide to the authority amended technical documentation and development plan of the deposit under the license justifying the requested extension. The costs associated with license extension are generally not substantial and mainly relate to preparing amendments to the technical documentation and development plan of the subsoil plot.

The Order of the Ministry of Natural Resources No. 439-R, dated October 31, 2002, recommends that the following issues be considered by the relevant governmental authorities when determining whether to approve an amendment (including an extension) of a license: (1) the grounds for the amendments, with specific information as to how the amendments may impact payments by the licensee to the federal and local budgets; (2) compliance of the licensee with the conditions of the license; and (3) the technical expertise and financial capabilities that would be required to implement the conditions of the amended license.

To the best of our knowledge, derived from publicly available information, the current practice of the regulatory authorities is generally consistent with the process as set out above. In particular, we are aware of a number of mining companies which have been granted extension of their Russian mining licenses for the past few years. In addition, two of our subsidiaries – Korshunov Mining Plant and Olzherassk Open Pit Mine – successfully extended their licenses for the entire term of the expected operational life of the subsoil plot. The terms of the two licenses were extended in accordance with the amendments we made to the development plans of the subsoil plots. Furthermore, as evidenced by a number of court cases during the past several years, license extensions are being rejected predominantly on the grounds of subsoil users being in violation of the material terms of the licenses. Though current regulation does not specify what license terms are material, current practice suggest that regulatory authorities tend to treat as material terms of license the terms related to license payments, production levels and operational milestones.

The factors that may, in practice, affect a company's ability to obtain the approval of license amendments (including extensions) include: (1) its compliance with the license terms and conditions; (2) its management's experience and expertise relating to subsoil issues; and (3) the relationship of its management with federal and/or local governmental authorities, as well as local governments. For a description of additional factors that may affect Russian companies' ability to extend their licenses, see Item 3. Key Information – Risk Factors – Risks Relating to Our Business and Industry – Our business could be adversely affected if we fail to obtain or renew necessary subsoil licenses and mining

and other permits or fail to comply with the terms of our subsoil licenses and mining and other permits. See also Item 3. Key Information Risk Factors Risks Relating to the Russian Federation Legal risks and uncertainties Deficiencies in the legal framework relating to subsoil licensing subject our licenses to the risk of governmental challenges and, if our licenses are suspended or terminated, we may be unable to realize our reserves, which could materially

Table of Contents

adversely affect our business, financial condition, results of operations and prospects and Item 3. Key Information Risk Factors – Risks Relating to the Russian Federation – Legal risks and uncertainties – Weaknesses relating to the Russian legal system and legislation create an uncertain investment climate.

Maintenance and termination of licenses

A license granted under the Subsoil Law is accompanied by a licensing agreement. The law provides that there will be two parties to any subsoil licensing agreement: the relevant state authorities and the licensee. The licensing agreement sets out the terms and conditions for the use of the subsoil.

Under a licensing agreement, the licensee makes certain environmental, safety and production commitments. For example, the licensee makes a production commitment to bring the field into production by a certain date and to extract an agreed-upon volume of natural resources each year. The licensing agreement may also contain commitments with respect to the social and economic development of the region. When the license expires, the licensee must return the land to a condition which is adequate for future use. Although most of the conditions set out in a license are based on mandatory rules contained in Russian law, certain provisions in a licensing agreement are left to the discretion of the licensing authorities and are often negotiated between the parties. However, commitments relating to safety and the environment are generally not negotiated.

The fulfillment of a licensee's conditions is a major factor in the good standing of the license. If the subsoil licensee fails to fulfill the licensee's conditions, upon notice, the license may be terminated or the subsoil user's rights may be restricted by the licensing authorities. However, if a subsoil licensee cannot meet certain deadlines or achieve certain volumes of exploration work or production output as set forth in a license, it may apply to amend the relevant license conditions, though such amendments may be denied.

The Subsoil Law and other Russian legislation contain extensive provisions for license termination. A licensee can be fined or the license can be suspended or terminated for repeated breaches of the law, upon the occurrence of a direct threat to the lives or health of people working or residing in the local area, or upon the occurrence of certain emergency situations. A license may also be terminated for violations of material license terms. Although the Subsoil Law does not specify which terms are material, failure to pay subsoil taxes and failure to commence operations in a timely manner have been common grounds for limitation or termination of licenses. Consistent underproduction and failure to meet obligations to finance a project would also be likely to constitute violations of material license terms. In addition, certain licenses provide that the violation by a subsoil licensee of any of its obligations may constitute grounds for terminating the license.

If the licensee does not agree with a decision of the licensing authorities, including a decision relating to the termination of a license or the refusal to change an existing license, the licensee may appeal the decision through administrative or judicial proceedings. In certain cases prior to termination, the licensee has the right to attempt to cure the violation within three months of its receipt of notice of the violation. If the issue has been resolved within such a three month period, no termination or other action may be taken.

Land Use Rights in Russia

Russian legislation prohibits the carrying out of any commercial activity, including mineral extraction, on a land plot without appropriate land use rights. Land use rights are needed and obtained for only the portions of the license area actually being used, including the plot being mined, access areas and areas where other mining-related activity is occurring.

Under the Land Code, companies generally have one of the following rights with regard to land in the Russian Federation: (1) ownership; (2) right of perpetual use; or (3) lease.

A majority of land plots in the Russian Federation are owned by federal, regional or municipal authorities which, through public auctions or tenders or through private negotiations, can sell, lease or grant other use rights to the land to third parties.

Table of Contents

Companies may also have a right of perpetual use of land that was obtained prior to the enactment of the Land Code; however, the Federal Law On Introduction of the Land Code, dated October 25, 2001, with certain exceptions, requires companies using land pursuant to rights of perpetual use by January 1, 2012 either to purchase the land from, or to enter into a lease agreement relating to the land with, the relevant federal, regional or municipal authority acting as owner of the land. See Item 3. Key Information Risk Factors Risks Relating to Our Business and Industry Certain of our Russian subsidiaries are required to either purchase or lease the land on which they operate.

Our mining subsidiaries generally have a right of perpetual use of their plots or have entered into long-term lease agreements. Under Russian law, a lessee generally has a priority right to enter into a new land lease agreement with a lessor upon the expiration of a land lease. In order to renew a land lease agreement, the lessee must apply to the lessor (usually state or municipal authorities) for a renewal prior to the expiration of the agreement. Any land lease agreement for a term of one year or more must be registered with the relevant state authorities.

Environmental Legislation in Russia

We are subject to laws, regulations and other legal requirements relating to the protection of the environment, including those governing the discharge of substances into the air and water, the formation, distribution and disposal of hazardous substances and waste, the cleanup of contaminated sites, flora and fauna protection and wildlife protection. Issues of environmental protection in Russia are regulated primarily by the Federal Law On Environmental Protection, dated January 10, 2002, as amended (the **Environmental Protection Law**), as well as by a number of other federal, regional and local legal acts.

In 2008-2010, Ministry of Natural Resources and Ecology prepared significant amendments to the Environmental Protection Law and other regulations. These draft amendments are actively being discussed by industry representatives and other interested parties such as the Russian Union of Industrialists and Entrepreneurs and the amendments have not been submitted to the State Duma. According to the amendments, the functions among state environmental agencies at both the federal and regional levels, as well as to strengthen liability for companies non-compliance with environmental laws and regulations. Among other things, the draft amendments contemplate that charges for environmental impact exceeding regulatory thresholds (norms) may be increased by twenty five times the current amounts commencing on January 1, 2012, and may be increased by one hundred times the current amounts commencing on January 1, 2016. Furthermore, fines for environmental violations may be increased by up to 20 times the current amounts. See Item 3. Key Information Risk Factors Risks Relating to Our Business and Industry More stringent environmental laws and regulations or more stringent enforcement or findings that we have violated environmental laws and regulations could result in higher compliance costs and significant fines and penalties, clean-up costs and compensatory damages, or require significant capital investment, or even result in the suspension of our operations, which could have a material adverse effect on our business, financial condition, results of operation and prospects.

Pay-to-pollute

The Environmental Protection Law and other Russian environmental protection legislation establish a pay-to-pollute regime administered by federal and local authorities. Pay-to-pollute (or payments for environmental pollution) is a form of mandatory reimbursement to the Russian government for damage caused to the environment.

The Russian government has established standards relating to the permissible impact on the environment and, in particular, limits for emissions and disposal of substances, waste disposal and resource extraction. A company may obtain temporary approval for exceeding these statutory limits from Rosprirodnadzor, the Russian environmental supervisory authority, depending on the type and scale of any environmental impact. Such approval is conditional upon the development by the company of a plan for the reduction of the emissions or disposals to the standard limits

which must be cleared with Rosprirodnadzor. The emission reduction plan is generally required to be implemented within a specific period. If, by the end of that period, a

Table of Contents

company's discharges of pollutants are still in excess of the statutory limits, a new emission reduction plan must be submitted to Rosprirodnadzor for approval.

Fees for the discharge per tonne of each contaminant into air and water and fees for waste disposal are established by governmental authorities. These fees are assessed based on a sliding scale for both the statutory or individually approved limits on emissions and effluents and for pollution in excess of these limits: the lowest fees are imposed for pollution within the statutory limits, intermediate fees are imposed for pollution within the individually approved temporary limits, and the highest fees are imposed for pollution exceeding such limits (above-limit fees). Payments of above-limit fees for violation of environmental legislation do not relieve a company from its responsibility to take environmental protection measures and undertake restoration and clean-up activities. In 2010, in Russia, we incurred above-norms/above-limit fees and penalties in the amount of approximately \$4.1 million.

Ecological expert examination

According to the Federal Law On Ecological Expert Examination, dated November 23, 1995, as amended (the **Ecology Law**), ecological expert examination is a process of verifying compliance of business or operational documentation with ecological standards and technical regulations established pursuant to the Ecology Law for the purpose of preventing a negative environmental impact of such business or operations. The Ecology Law provides for the main principles for conducting ecological expert examination and for the type of documentation which is subject to such inspection.

In relation to our operating companies, all documentation underlying the issuance of some of our licenses, in particular licenses issued by federal authorities to conduct activities related to collection, usage, decontamination, transportation and disposal of dangerous wastes, are subject to ecological expert examination.

Examination of documentation related to capital construction is regulated under the Urban Development Code. The Urban Development Code provides for governmental inspection to verify the compliance of project documentation with relevant technical regulations, including sanitary-epidemiological and environmental regulations, requirements for the protection of objects of cultural heritage, as well as fire, industrial, nuclear, radiation and other kinds of safety requirements, and compliance with the results of engineering surveys with relevant technical regulations.

Environmental enforcement authorities

Currently state environmental regulation is administered by several federal services and agencies and their regional subdivisions, in particular, the Federal Service for the Supervision of the Use of Natural Resources, Rosprirodnadzor, the Federal Service for Hydrometrology and Environmental Monitoring, the Federal Agency for Subsoil Use, the Federal Agency for Forestry, the Federal Agency for Water Resources and some others. Included in these agencies sphere of responsibility are environmental preservation and control, enforcement and observance of environmental legislation, drafting and approving regulations and filing court claims to recover environmental damages. The statute of limitations for such claims is 20 years.

The Russian federal government and the Ministry of Natural Resources and Ecology are responsible for coordinating the work of the federal services and agencies engaged in state environmental regulation.

The structure of environmental enforcement authorities described above was established in 2004. This structure was subjected to certain changes in 2008. In particular, the Ministry of Natural Resources was transformed into the Ministry of Natural Resources and Ecology and Rostekhnadzor was put under its supervision. In late 2010, this structure was further changed and all powers previously held by Rostekhnadzor in terms of environmental control, permits and fees administration were transferred to Rosprirodnadzor.

Environmental liability

If the operations of a company violate environmental requirements or cause harm to the environment or any individual or legal entity, a court action may be brought to limit or ban these operations and require the

Table of Contents

company to remedy the effects of the violation. Any company or employees that fail to comply with environmental regulations may be subject to administrative and/or civil liability, and individuals may be held criminally liable. Courts may also impose clean-up obligations on violators in lieu of or in addition to imposing fines or other penalties to compensate for damages.

Subsoil licenses generally require certain environmental commitments. Although these commitments can be substantial, the penalties for failing to comply and the reclamation requirements are generally low; however, failure to comply with reclamation requirements can result in a suspension of mining operations.

Reclamation

We conduct our reclamation activities for land damaged by production in accordance with the Basic Regulation on Land Reclamation, Removal, Preservation, and Rational Use of the Fertile Soil Layer, approved by Order No. 525/67 of December 22, 1995, of the Ministry of Natural Resources. In general, our reclamation activities involve both a technical stage and a biological stage. In the first stage, we backfill the pits, grade and terrace mound slopes, level the surface of the mounds, and add clay rock on top for greater adaptability of young plants. In the biological stage, we plant conifers (pine, larch, cedar) on horizontal and gently sloping surfaces and shrubs and bushes to reinforce inclines. Russian environmental regulations do not require mines to achieve the approximate original contour of the property as is required, for example, in the United States.

Environmental programs

We have been developing and implementing environmental programs at all of our mining, steel, ferroalloys and power subsidiaries. Such programs include measures to enforce our adherence to the requirements and limits imposed on air and water pollution, as well as allocation of industrial waste, introduction of environmentally friendly industrial technologies, the construction of purification and filtering facilities, the repair and reconstruction of industrial water supply systems, the installation of metering systems, reforestation and the recycling of water and industrial waste.

Kyoto Protocol

In December 1997, in Kyoto, Japan, the signatories to the United Nations Convention on Climate Change established individual, legally binding targets to limit or reduce greenhouse gas emissions by developed nations. This international agreement, known as the Kyoto Protocol, came into force on February 16, 2005. As of November 2007, 175 states (including Russia) and regional economic integration organizations (such as the European Union) had ratified the Kyoto Protocol. We do not currently anticipate that the implementation of the Kyoto Protocol will have a material impact on our business beyond our plants in Bulgaria and Romania. All E.U. countries, including Bulgaria and Romania, are accepting national plans for allocation of greenhouse gas emission quotas starting from 2008. Toplofikatsia Rousse, located in Bulgaria, and our three Romanian companies are also obtaining greenhouse gas emission quotas for the 2008-2012 period. According to our production program, both surpluses within quota and quota overruns may occur. Quota overruns will result in a requirement to acquire emission reduction units under the E.U. Greenhouse Gas Emission Trading Scheme.

Health and Safety Regulations in Russia

Due to the nature of our business, much of our activity is conducted at industrial sites by large numbers of workers, and workplace safety issues are of significant importance to the operation of these sites.

The principal law regulating industrial safety is the Federal Law On Industrial Safety of Dangerous Industrial Facilities, dated July 21, 1997, as amended (the **Safety Law**). The Safety Law applies, in particular, to industrial

facilities and sites where certain activities are conducted, including sites where lifting machines are used, where alloys of ferrous and non-ferrous metals are produced, where hazardous substances are stored and used (including allowed concentrations) and where certain types of mining is done.

Table of Contents

There are also regulations that address safety rules for coal mines, the production and processing of ore, the blast-furnace industry, steel smelting, alloy production and nickel production. Additional safety rules also apply to certain industries, including metallurgical and coke chemical enterprises and the foundry industry.

Any construction, reconstruction, liquidation or other activities in relation to regulated industrial sites is subject to a state industrial safety review. Any deviation from project documentation in the process of construction, reconstruction or liquidation of industrial sites is prohibited unless reviewed by a licensed expert organization and approved by Rostekhnadzor.

Companies that operate such industrial facilities and sites have a wide range of obligations under the Safety Law and the Labor Code of Russia of December 30, 2001, effective February 1, 2002, as amended (the **Labor Code**). In particular, they must limit access to such sites to qualified specialists, maintain industrial safety controls and carry insurance for third-party liability for injuries caused in the course of operating industrial sites. The Safety Law also requires these companies to enter into contracts with professional wrecking companies or create their own wrecking services in certain cases, conduct personnel training programs, create systems to cope with and inform Rostekhnadzor of accidents and maintain these systems in good working order.

In certain cases, companies operating industrial sites must also prepare declarations of industrial safety which summarize the risks associated with operating a particular industrial site and measures the company has taken and will take to mitigate such risks and use the site in accordance with applicable industrial safety requirements. Such declarations must be adopted by the chief executive officer of the company, who is personally responsible for the completeness and accuracy of the data contained therein. The industrial safety declaration, as well as a state industrial safety review, are required for the issuance of a license permitting the operation of a dangerous industrial facility.

Rostekhnadzor has broad authority in the field of control and management of industrial safety. In case of an accident, a special commission led by a representative of Rostekhnadzor conducts a technical investigation of the cause. The company operating the hazardous industrial facility where the accident took place bears all costs of an investigation. Rostekhnadzor officials have the right to access industrial sites and may inspect documents to ensure a company's compliance with safety rules. Rostekhnadzor may suspend for up to 90 days or initiate a court decision to terminate operations of companies and/or impose administrative liability on officers of such companies.

Any company or individual violating industrial safety rules may incur administrative and/or civil liability, and individuals may also incur criminal liability. A company that violates safety rules in a way that negatively impacts the health of an individual may also be obligated to compensate the individual for lost earnings, as well as health-related damages.

Russian Antimonopoly Regulation

The Federal Law On Protection of Competition, dated July 26, 2006, as amended (the **Competition Law**), provides for a mandatory pre-approval by the FAS of the following actions:

other than in respect to financial organizations, such as banks, an acquisition by a person (or its group) of more than 25% of the voting shares of a joint-stock company (or one-third of the interests in a limited liability company), except upon incorporation, and the subsequent increase of these stakes to more than 50% of the total number of the voting shares and more than 75% of the voting shares (one-half and two-thirds of the interests in a limited liability company), or acquisition by a person (or its group) of ownership or rights of use with respect to the core production assets and/or intangible assets of an entity if the balance sheet value of such assets exceeds 20% of the total balance sheet value of the core production and intangible assets of such entity, or obtaining rights to determine the conditions of business activity of an entity or to exercise the powers of its

executive body by a person (or its group), if, in any of the above cases, the aggregate asset value of an acquirer and its group together with a target and its group exceeds 7 billion rubles and at the same time the total asset value of the target and its group exceeds 250 million rubles, or the total annual revenues of such acquirer and its

Table of Contents

group, and the target and its group for the preceding calendar year exceed 10 billion rubles and at the same time the total asset value of the target and its group exceeds 250 million rubles, or an acquirer, and/or a target, or any entity within the acquirer's group or a target's group are included in the Register of Entities Having a Market Share in Excess of 35% on a Particular Commodity Market (the **Monopoly Register**);

mergers and consolidations of entities, other than financial organizations, if their aggregate asset value (the aggregate asset value of the groups of persons to which they belong) exceeds 3 billion rubles, or total annual revenues of such entities (or groups of persons to which they belong) for the preceding calendar year exceed 6 billion rubles, or if one of these entities is included in the Monopoly Register; and

founding of a business entity, if its charter capital is paid by the shares (or limited liability company interests) and/or the assets (other than cash) of another business entity (other than financial organization) or the newly founded business entity acquires shares (or limited liability company interests) and/or the assets (other than cash) of another business entity based on a transfer act or a separation balance sheet and rights in respect of such shares (or limited liability company interests) and/or assets (excluding monetary funds) as specified above, at the same time provided that the aggregate asset value of the founders (or group of persons to which they belong) and the business entities (or groups of persons to which they belong) which shares (or limited liability company interests) and/or assets (other than cash) are contributed to the charter capital of the newly founded business entity exceeds 7 billion rubles, or total annual revenues of the founders (or group of persons to which they belong) and the business entities (or groups of persons to which they belong) which shares (or limited liability company interests) and/or assets are contributed to the charter capital of the newly founded business entity for the preceding calendar year exceed 10 billion rubles, or if a business entity whose shares (or limited liability company interests) and/or assets (other than cash) are contributed to the charter capital of the newly founded business entity is included in the Monopoly Register.

The above requirements for a mandatory pre-approval by the FAS will not apply if the transactions are performed by members of the same group, if the information about such a group of persons was disclosed to the antimonopoly authority and there were no changes within one month prior to the date of the transaction within that group of persons. In such cases, the FAS must be notified of the transactions subsequently in accordance with Russian anti-monopoly legislation. Furthermore, the requirement for a mandatory approval of transactions described in the first bulletpoint above will not apply if the transactions are performed by members of the same group where a company and individual or an entity, if such an individual or an entity holds (either due to its participation in this company or based on the authorities received from other persons) more than 50% of the total amount of votes in the equity (share) capital of this company.

The Competition Law provides for a mandatory post-transactional notification (within 45 days of the closing) to the FAS in connection with actions specified above if the aggregate asset value or total annual revenues of an acquirer and its group, and a target and its group for the preceding calendar year exceed 400 million rubles and at the same time the total asset value of the target and its group exceeds 60 million rubles.

A transaction entered into in violation of the above requirements may be invalidated by a court decision pursuant to a claim brought by the FAS if the FAS proves to the court that the transaction leads or could lead to the limitation of competition in the relevant Russian market. The FAS may also issue binding orders to companies that have violated the applicable antimonopoly requirements and bring court claims seeking liquidation, split-up or spin-off of business entities if a violation of antimonopoly laws was committed by such business entities.

The Strategic Industries Law

On April 29, 2008, the Strategic Industries Law was adopted in Russia. It regulates foreign investments in companies with strategic importance for the national defense and security of the Russian Federation (**Strategic Companies**). The Strategic Industries Law provides an exhaustive list of strategic activities,

Table of Contents

engagement in which makes a company subject to restrictions. Among others, the list of such activities includes exploration and/or production of natural resources on subsoil plots of federal importance. Subsoil plots of federal importance include plots with deposits of uranium, diamonds, high-purity quartz ore, nickel, cobalt, niobium, lithium, beryllium, tantalum, yttrium-group rare-earth metals and platinumoid metals. They also include deposits of oil, gas, vein gold and copper which are above certain size limits specified in the Subsoil Law, as well as subsoil plots of the internal sea, territorial sea and continental shelf; and subsoil plots, the use of which requires the use of land plots included in the category of National Defense and Security land. The List of subsoil plots of federal importance was first officially published in *Rossiyskaya Gazeta* on March 5, 2009 and amended twice since then, on March 18, 2010 and on August 13, 2010. Services rendered by business entities included into the register of natural monopolies pursuant to the Federal Law On Natural Monopolies, dated August 17, 1995, as amended, with certain exceptions, are also considered to constitute strategic activity. Furthermore, the activity of a business entity which is deemed to occupy a dominant position in the production and sale of metals and alloys with special features which are used in production of weapons and military equipment is also deemed to be a strategic activity. The production and distribution of industrial explosives as well as the use of sources of radioactivity are also deemed to be activities of strategic importance for national defense and homeland security.

Investments resulting in a foreign investor or a group of entities obtaining control over a Strategic Company require prior approval from state authorities. The procedure for issuing such consent will involve a special governmental commission on the control of foreign investments (the **Governmental Commission**), which was established by a government resolution dated July 6, 2008 as the body responsible for granting such consents, and the FAS, which is authorized to process applications for consent from foreign investors and to issue such consents based on the decisions of the Governmental Commission. **Control** for these purposes means an ability to determine, directly or indirectly, decisions taken by a Strategic Company, whether through voting at the general shareholders (or limited liability company interest-holders) meeting of the Strategic Company, participating in the board of directors or management bodies of the Strategic Company, or acting as the external management organization of the Strategic Company or otherwise. Thus, generally, control will be deemed to exist if any foreign investor or a group of entities acquires more than 50% of the shares (or limited liability interests) of a Strategic Company, or if by virtue of a contract or ownership of securities with voting rights it is able to appoint more than 50% of the members of the board of directors or of the management board of a Strategic Company. However, there are special provisions for Strategic Companies involved in the exploration or production of natural resources on plots of federal importance (**Subsoil Strategic Companies**): a foreign investor or group of entities is considered to have control over a Subsoil Strategic Company when such foreign investor or group of entities holds directly or indirectly 10% or more of the voting shares of the Subsoil Strategic Company or holds the right to appoint its sole executive officer and/or 10% or more of its management board or has the unconditional right to elect 10% or more of its board of directors.

Furthermore, in case a foreign investor or its group of entities which is a holder of securities of a Strategic Company, Subsoil Strategic Company or other entity which exercises control over these companies becomes a direct or indirect holder of voting shares in amount which is considered to give them direct or indirect control over these companies in accordance with the Strategic Industries Law due to a change in the allocation of votes resulting from the procedures provided by Russian law (e.g. as a result of a buy-back by the relevant company of its shares, conversion of preferred shares into common shares or holders of preferred shares becoming entitled to vote at a general shareholders meeting in cases provided by Russian law), such shareholders will have to apply for state approval of their control within three months of receiving such control. If the Governmental Commission refuses to grant the approval the shareholders shall sell the relevant part of their respective shares or participatory interest, and if they do not comply with this requirement, a Russian court can deprive such foreign investor or its group of entities of the voting rights in such Strategic Company upon a claim of the competent authority. In such cases, the shares of the foreign investor are not counted for the purposes of establishing a quorum and reaching the required voting threshold at the general shareholders meeting of the Strategic Company.

Table of Contents

If a foreign investor or its group of entities obtains control over a Strategic Company in violation of the Strategic Industries Law, the relevant transaction is void, and in certain cases a Russian court can deprive such foreign investor or group of entities of the voting rights in such Strategic Company upon a claim by the competent authority. In addition, resolutions of the general shareholders' meetings or other management bodies of a Strategic Company adopted after a foreign investor or group of entities obtained control over the Strategic Company in violation of the Strategic Industries Law, as well as transactions entered into by the Strategic Company after obtaining such control, may be held invalid by a court upon a claim by the competent authority. See Item 3. Key Information Risk Factors Risks Relating to the Russian Federation Legal risks and uncertainties Expansion of limitations on foreign investment in strategic sectors could affect our ability to attract and/or retain foreign investments.

Employment and Labor Regulations in Russia

Labor matters in Russia are governed primarily by the Labor Code. In addition to this core legislation, relationships between employers and employees are regulated by federal laws, such as the Law On Employment in the Russian Federation, dated April 19, 1991, as amended, and the Law On Compulsory Social Insurance Against Industrial Accidents and Occupational Diseases, dated July 24, 1998, as amended; legal acts of executive authorities; and local government acts related to labor issues.

Employment contracts

As a general rule, employment contracts for an indefinite term are entered into with all employees. Russian labor legislation generally disfavors fixed-term employment contracts. However, an employment contract may be entered into for a fixed term of up to five years in certain cases where labor relations may not be established for an indefinite term due to the nature of the duties or the conditions of the performance of such duties, as well as in other cases expressly identified by the Labor Code or other federal law. In some cases it is also possible to enter into an employment contract for the employee to perform specified tasks. All terms and conditions of employment contracts are regulated by the Labor Code.

Under Russian law, employment may be terminated by mutual agreement between the employer and the employee at the end of the term of a fixed-term employment contract or on the grounds set out in the Labor Code as described below. An employee has the right to terminate his or her employment contract with a minimum of two weeks' notice (or one month's notice for a company's chief executive officer), unless the employment contract is terminated before the notice period ends by mutual agreement between employer and employee.

An employer may terminate an employment contract only on the basis of the specific grounds enumerated in the Labor Code, including but not limited to:

- liquidation of the enterprise or downsizing of staff;

- failure of the employee to comply with the position's requirements due to incompetence, as confirmed by the results of an attestation;

- repeated failure of the employee to fulfill his or her work duties without valid reason, provided that the employee has been disciplined previously;

- entering the workplace under the influence of alcohol, narcotics or other intoxicating substances;

- a single gross breach by an employee of his or her work duties, including truancy;

disclosure of state secrets or other confidential information, which an employee has come to know during fulfillment of his professional duties;

embezzlement, willful damage or destruction of assets, and misappropriation as confirmed by a court decision or a decision by another competent government authority;

Table of Contents

failure to comply with safety requirements in the workplace if such failure to comply caused injuries, casualties or catastrophe; and

provision by the employee of false documents upon entry into the employment contract.

An employee dismissed from an enterprise due to downsizing or liquidation is entitled to receive compensation and salary payments for a certain period of time, depending on the circumstances.

The Labor Code also provides protections for specified categories of employees. For example, except in cases of liquidation of an enterprise and other events specified in the Labor Code, an employer cannot dismiss minors, pregnant women, mothers with a child under the age of three, single mothers with a child under the age of 14 or other persons caring for a child under the age of 14 without a mother.

Any termination by an employer that is inconsistent with the Labor Code requirements may be invalidated by a court, and the employee may be reinstated. Lawsuits resulting in the reinstatement of illegally dismissed employees and the payment of damages for wrongful dismissal are increasingly frequent, and Russian courts tend to support employees rights in most cases. Where an employee is reinstated by a court, the employer must compensate the employee for unpaid salary for the period between the wrongful termination and reinstatement, as well as for mental distress.

Work time

The Labor Code generally sets the regular working week at 40 hours. Any time worked beyond 40 hours per week, as well as work on public holidays and weekends, must be compensated at a higher rate.

For employees working in hazardous or harmful conditions, the regular working week is decreased by four hours in accordance with government regulations. Some of our production employees qualify for this reduced working week.

Annual paid vacation leave under the law is 28 calendar days. Our employees who work in mines and pits or work in harmful conditions may be entitled to additional paid vacation ranging from 7 to 42 working days.

The retirement age in the Russian Federation is 60 years for males and 55 years for females. However, employees who work in underground and open pit mines or do other work in potentially harmful conditions have the right to retire at an earlier age. The rules defining such early retirement ages are established by the Federal Law On Labor Pensions in the Russian Federation, dated December 17, 2001, as amended.

Salary

The minimum monthly salary in Russia, as established by federal law, is 4,330 rubles. Although the law requires that the minimum wage be at or above a minimum subsistence level, the current minimum wage is generally considered to be less than a minimum subsistence level.

Strikes

The Labor Code defines a strike as the temporary and voluntary refusal of workers to fulfill their work duties with the intention of settling a collective labor dispute. Russian legislation contains several requirements for legal strikes. Participation in a legal strike may not be considered by an employer as grounds for terminating an employment contract, although employers are generally not required to pay wages to striking employees for the duration of the strike. Participation in an illegal strike may be adequate grounds for termination of employment.

Trade unions

Although Russian labor regulations have decreased the authority of trade unions compared with the past, they retain influence over employees and, as such, may affect the operations of large industrial companies in

Table of Contents

Russia, such as Mechel. In this regard, our management routinely interacts with trade unions in order to ensure the appropriate treatment of our employees and the stability of our business.

The activities of trade unions are generally governed by the Federal Law On Trade Unions, Their Rights and Guarantees of Their Activity, dated January 12, 1996, as amended (the **Trade Union Law**). Other applicable legal acts include the Labor Code, which provides for more detailed regulations relating to activities of trade unions.

The Trade Union Law defines a trade union as a voluntary union of individuals with common professional and other interests that is incorporated for the purposes of representing and protecting the rights and interests of its members. National trade union associations, which coordinate activities of trade unions throughout Russia, are also permitted.

As part of their activities, trade unions may:

- negotiate collective contracts and agreements such as those between the trade unions and employers, federal, regional and local governmental authorities and other entities;

- monitor compliance with labor laws, collective contracts and other agreements;

- access work sites and offices, and request information relating to labor issues from the management of companies and state and municipal authorities;

- represent their members and other employees in individual and collective labor disputes with management;

- organize and participate in strikes; and

- monitor redundancy of employees and seek action by municipal authorities to delay or suspend mass layoffs.

Russian laws require that companies cooperate with trade unions and do not interfere with their activities. Trade unions and their officers enjoy certain guarantees as well, such as:

- legal restrictions as to rendering redundant employees elected or appointed to the management of trade unions;

- protection from disciplinary punishment or dismissal on the initiative of the employer without prior consent of the management of the trade union and, in certain circumstances, the consent of the relevant trade union association;

- retention of job positions for those employees who stop working due to their election to the management of trade unions;

- protection from dismissal for employees who previously served in the management of a trade union for two years after the termination of the office term, except where a company is liquidated or the employer is otherwise entitled to dismiss the employee; and

- provision of necessary equipment, premises and vehicles by the employer for use by the trade union free of charge, if provided for by a collective bargaining contract or other agreement.

If a trade union discovers any violation of work condition requirements, notification is sent to the employer with a request to cure the violation and to suspend work if there is an immediate threat to the lives or health of employees. The trade union may also apply to state authorities and labor inspectors and prosecutors to ensure that an employer

does not violate Russian labor laws. Trade unions may also initiate collective labor disputes, which may lead to strikes.

To initiate a collective labor dispute, trade unions present their demands to the employer. The employer is then obliged to consider the demands and notify the trade union of its decision. If the dispute remains unresolved, a reconciliation commission attempts to end the dispute. If this proves unsuccessful, collective labor disputes are generally referred to mediation or labor arbitration. Although the Trade Union Law provides

Table of Contents

that those who violate the rights and guarantees provided to trade unions and their officers may be subject to disciplinary, administrative and criminal liability, no specific consequences for such violations are set out in Russian legislation.

Regulation of Russian Electricity Market

Industry background

The Russian utilities sector landscape has undergone dramatic changes within the past several years, since the introduction of electricity industry reform under Government Resolution On Restructuring of Electricity Industry of the Russian Federation No. 526 dated July 11, 2001 (**Resolution No. 526**). The monopoly RAO Unified Energy System of Russia OAO (the **UES**) was liquidated and separated in to separate businesses: electricity and heat generation, transmission (high voltage trunk grid), distribution (medium- and low-voltage infrastructure) and supply (sale of electricity to customers).

The electricity generation sector is now principally comprised of six thermal wholesale generating companies (called **OGKs** based on the Russian acronym for Wholesale Generating Company), one hydro wholesale generating company (named RusHydro), 14 territorial generating companies (**TGKs**), RAO Eastern Energy Systems OAO, Inter RAO OAO, various nuclear generation complexes (owned and/or operated by the Rosenergoatom Concern OJSC), as well as a number of independent regional diversified electricity producers and suppliers (Irkutskenergo OAO, Bashkirenergo OAO, Tatenergo OAO, Novosibirskenergo OAO).

Sales of electricity

The Russian electricity market consists of wholesale and retail electricity and capacity markets. The wholesale electricity and capacity market encompasses European territory of the Russian Federation, Urals and Siberia. This market provides a framework for large-scale, often interregional, energy trades. The retail electricity market operates within all Russian regional territories and provides a framework for mid-scale and end-consumer energy trades. This market is regulated by the respective Regional Energy Committees (the **RECs**).

Wholesale electricity market

The wholesale market is a system of contractual relationships between all of its participants linked together by the process of production, transmission, distribution, purchase and sale and consumption of electricity. This unified energy system encompasses six regional unified energy systems, which are the following: North-West, Central, Urals, Mid-Volga, South and Siberia.

The wholesale market participants mainly include:

producers of electricity and capacity: generating companies (OGKs, TGKs and various other generators);

electricity supply companies (energy traders) which have purchased electricity and capacity for further resale on wholesale and retail markets; and

purchasers of electricity and capacity: major power consumers and generating companies which at certain points in time may elect to purchase electricity to fulfill their supply obligations instead of generating their own.

The infrastructure of the wholesale market is operated by the Non-commercial Partnership Market Council and the Trade System Administrator OAO (the **TSA**) which organize the trading; a system operator established in the form of an open joint-stock company (the **System Operator**) by the former UES; the Federal Grid Company (the **FGK**), which owns and runs the federal transmission network of the electric grids; OAO Holding MRSK, which owns and runs region transmission networks of the electric grids; and the Financial Settlement Center ZAO, which is a clearance and settlement organization for the wholesale electricity and capacity market.

Table of Contents

Currently electricity is traded on the basis of the following trading mechanisms:

Regulated bilateral contracts

Regulated contracts are effectively take-or-pay obligations at regulated prices defined by the Federal Tariff Service (the FTS) for electricity and capacity volumes. The volumes of electricity to be traded by the generators under regulated contracts are set up by the FTS annually based on percentages of the volumes of electricity generated in the previous year. Under Government Resolution No. 205 dated April 7, 2007, the volumes of electricity to be traded under regulated contracts are to gradually decline for the wholesale market to become fully liberalized by the year 2011. The volumes of electricity to be traded under regulated contracts in 2010 are set at 35% to 40% for the first half of 2010 and at 15% to 20% for the remainder of 2010. Starting from January 1, 2011, electricity is traded at non-regulated prices, except for electricity intended for supply to households.

A generator may provide the volumes of electricity it must sell under regulated contracts either through own generation or through the purchase of electricity on the spot market at market prices. Similarly, its customers receive electricity at regulated prices in the volumes agreed under the regulated contracts, regardless of their actual needs, and can freely trade the imbalance on the spot market at market prices (either by purchasing additional volumes, if needed, or selling the excess electricity volumes).

Non-regulated bilateral contracts

Electricity supply volumes which are not agreed upon under regulated contracts, as well as all new generation capacity commissioned after January 1, 2007, can be traded by participants of the wholesale market under non-regulated contracts, on the one-day-ahead spot market or on the balancing market. All terms of electricity supply under non-regulated contracts are subject to free negotiation between sellers and purchasers.

Retail electricity market

The retail market currently includes sales companies that do not generate electricity, but purchase it from generators on the wholesale market.

The retail electricity market operates on the following main principles: (1) end consumers are free to choose between sales companies; (2) end consumers purchase at free prices set on the market, except for contracts with guaranteeing suppliers; and (3) guaranteeing suppliers cannot refuse to enter into a contract with an end consumer.

Guaranteeing suppliers sell electricity under prices that take account of: (1) the prices on the wholesale electricity market; (2) the sales premium of the particular guaranteeing supplier set by respective regional authorities; and (3) the prices for electricity transmission through regional networks.

Heat market

Heat markets are regional retail markets and heat prices are regulated and set within the general guidelines provided by the FTS and by regional authorities. Minimum and maximum prices for heat energy traded on the retail markets are set by the FTS separately for each administrative region of Russia for a period of at least one year. Regional authorities establish the prices for relevant territories within the range set by the FTS and subject to the types and prices of fuel used to produce the heat and the volumes of heat purchased on the relevant territory.

Our Southern Kuzbass Power Plant delivers heat energy (in the form of hot water) at regulated prices to residential and commercial customers in Kaltan and Osinniki. Mechel-Energo delivers heat energy (in the form of hot water and

steam) at regulated prices to residential and commercial customers in the cities of Vidnoe, Chelyabinsk, Chebarkul, Beloretsk, Guryevsk, Mezhdurechensk, Myski and Izhevsk.

U.S. Environmental, Health, Safety and Related Regulation

The Bluestone companies, like the rest of the coal mining industry in the United States, are subject to a variety of federal, state and local laws and regulations with respect to matters such as: the pollution,

Table of Contents

protection, investigation, reclamation and restoration of the environment, human and animal health and safety, and natural resources; the use, generation, handling, transport, treatment, storage, recycling, disposal, presence, release and threatened release of and exposure to hazardous substances or waste; noise, odor, mold, dust and nuisance; and cultural and historic resources, land use and other similar matters. We are required to incur significant costs to comply with these requirements.

Violators of the laws summarized below may generally be subject to fines, in most cases applicable on a per day, per violation basis. In some cases even seemingly minor violations may add up to significant penalties. In addition, most U.S. environmental, health and safety laws authorize citizen suits, permitting third parties to make claims for violations of law.

We endeavor to conduct our operations in compliance with all applicable regulatory requirements, but violations may occur from time to time. If we fail to comply with any present or future regulations, we could be subject to liabilities, required changes to or the suspension or curtailment of operations, and fines and penalties. In addition, such regulations would restrict our ability to expand our facilities or could require us to acquire costly equipment or incur other significant expenses. Often, private suits for personal injury, property damage or diminution, or similar claims may be initiated in connection with alleged regulatory infractions.

Certain environmental laws impose liability for the costs of removal or remediation of hazardous or toxic substances on an owner, occupier or operator of real estate, even if such person or company was unaware of or not responsible for the presence of such substances. Soil and groundwater contamination may have occurred at, near or arising from some of our facilities, including instances in which contamination may have existed prior to our ownership or occupation of a site. As a result, we may incur cleanup costs in such potential removal, remediation or reclamation efforts.

From time to time new legislation or regulations are enacted, or existing requirements are changed, and it is difficult to anticipate how such regulations will be implemented and enforced. We continue to evaluate the necessary steps for compliance with regulations as they are enacted.

The following is a summary of various U.S. environmental, health and safety and similar regulations that we believe have a material impact on our U.S. coal business in West Virginia.

Surface Mining Control and Reclamation Act and corresponding West Virginia law

The federal Surface Mining Control and Reclamation Act, which is administered by the U.S. Department of Interior's Office of Surface Mining Reclamation and Enforcement, establishes mining, environmental protection and reclamation requirements for all aspects of surface mining, as well as many aspects of underground mining. States that have adopted comprehensive mining regulatory programs may obtain federal approval and become the regulatory authority with primary control and enforcement of these standards. The West Virginia Surface Coal Mining and Reclamation Act (**SCMRA**) was enacted as an approved state program for administration of the federal Surface Mining Control and Reclamation Act.

SCMRA and the rules promulgated thereunder set forth detailed design, construction, reclamation and performance standards for surface and underground mines that parallel the requirements of the federal regulations. SCMRA prohibits any person from engaging in surface mining operations without a permit from the state Department of Environmental Protection (**DEP**). Permit requirements generally track, but are not identical to, the federal regulations. The state regulations, for example, contain special procedures for ascertaining the ownership, control and compliance status of the applicant. In addition, provisions relating to bonding, prospecting and inactive status differ from the federal regulations.

Underground coal mining operations must also maintain permits for their above-ground effects. Permit requirements include submitting a subsidence control plan that describes the type of mining to be conducted and its probable surface impacts. The plan must generally include measures to minimize subsidence and related damages.

Administrative enforcement provisions include civil penalties, cessation orders and permit revocation. Appeals from DEP actions are heard by the Surface Mining Board and limited judicial review is available

Table of Contents

upon appeal to the circuit court of the county in which the mine is located. Suits by private citizens may also be brought to obtain injunctions or damages.

Prospecting activity must be preceded by a notice of intent to prospect. Where more than a specified amount of coal is to be removed, public notice and an opportunity for comments must be given before obtaining the required approval from DEP.

Under SCMRA, surface mining operations must also comply with monitoring requirements and effluent limitations set forth in the federal Clean Water Act. In addition, the state Water Pollution Control Act requires that a permit be obtained to construct, install, modify, reopen, operate or abandon any mine, quarry or preparation plant from which any discharges or pollution are expected. See below for further discussion of the Clean Water Act and other water related regulatory issues.

Like its federal counterpart, SCMRA also provides for the designation of certain areas as unsuitable for all or certain types of surface mining.

The West Virginia Abandoned Mine Lands and Reclamation Act, created pursuant to Title IV of SCMRA, establishes an abandoned mine reclamation fund for reclamation and restoration activities and preventive and remedial measures associated with past mining.

Surety bonds and mine closure costs

Federal and state laws require mining operations to obtain surety bonds or other forms of financial security to secure payment of certain long-term obligations, including mine closure and reclamation costs, state workers' compensation costs and other miscellaneous obligations. Many of these bonds are renewable on an annual basis. In recent years, surety bond premiums have increased and the market terms of surety bonds have generally become less favorable. The number of companies willing to issue surety bonds has also declined. In addition, the DEP has increasingly required that reclamation bonds be posted in the form of certificates of deposit or other cash-backed securities. We cannot predict with certainty our future ability to obtain, or the cost of, bonds that may be required for our U.S. coal operations.

Mine safety and health

The U.S. coal mining industry is subject to extensive and comprehensive regulation with respect to worker health and safety. In 1977 the Federal Mine Safety and Health Act (the **Act**) consolidated all federal health and safety regulations of the mining industry (coal and non-coal) under a single statutory scheme. The Act strengthened and expanded the rights of miners, and enhanced the protection of miners from retaliation for exercising those rights. The Act also created the Mine Safety and Health Administration (**MSHA**), which administers the provisions of the Act and enforces compliance with mandatory safety and health standards. MSHA has authority over all mining and mineral processing operations in the United States, regardless of size, number of employees, commodity mined or method of extraction. The Federal Mine Safety and Health Review Commission independently reviews MSHA's enforcement actions. West Virginia also maintains a program for mine safety and health regulation, inspection and enforcement.

In response to certain highly publicized mine incidents in recent years, legislative and regulatory bodies at the federal and state levels, including MSHA, have promulgated or proposed various new statutes, regulations and policies relating to mine safety and mine emergencies, including the federal MINER Act passed in 2006 and the recently proposed S-MINER Act. Some of the new obligations include, for example, improved technologies and safety practices, tracking and communication, emergency response plans and equipment. In addition, federal black lung benefits laws and coal industry health benefits laws, among others, may impact us. Regulatory efforts in this area are

ongoing. At this time, it is not possible to predict with accuracy the full effect of new and future U.S. mine health and safety regulation on our business.

Clean Air Act (CAA)

The CAA and corresponding state rules regulate emissions of materials into the air and affect our U.S. coal operations both directly and indirectly. Certain sources of air pollution, for example, including

Table of Contents

coal preparation and processing operations, must obtain and maintain operating permits, which are generally reviewed every five years and contain compliance requirements such as compliance certification, testing, monitoring, reporting and record-keeping. Such operations are also subject to emission restrictions, including for particulate matter and fugitive dust. The CAA also indirectly affects coal mining operations by extensively regulating the emissions of coal-fueled power plants and industrial boilers. In general, there has been increased interest in recent years in legislation focused on power plant emissions. Construction of new sources of air pollution (including in some cases reconstruction and modification of existing sources) also triggers preconstruction review and approval by authorities, with typically more stringent control technology and permitting requirements.

Some of the CAA requirements that may materially directly or indirectly affect our operations are briefly described below. West Virginia has also promulgated regulations relating to acid rain, emissions limitations for specific pollutants, and permit standards for the construction, major modification or relocation of major stationary sources of air pollution. Standards governing air pollution from coal refuse disposal, coal preparation plants, coal handling operations and ambient air quality for particular pollutants, as well as procedures relating to air pollution emergencies, are also established under the state regulations.

Acid rain. One of the regulatory programs established under the CAA concerns the control of sulfur dioxide and nitrogen oxide (**NO_x**), precursors of acid deposition. Through an emission allowance and trading program, Title IV of the CAA imposes a two-phase cap on total sulfur dioxide emissions from sources including electric utilities. All of the Phase I and Phase II allowances offered by EPA have been purchased each year since there is no minimum bid requirement. In general, affected power plants have also sought to comply with these requirements by switching to lower sulfur fuels, installing pollution control equipment, and reducing electricity generation levels. The program also directs EPA to impose NO_x emissions rate limits on coal-fired electricity generating sources. At this time, we believe that these regulations have affected coal prices but we cannot predict with certainty the future effect of these CAA provisions on our business.

Emissions standards for particulate matter and ozone. A significant component of the CAA is the national ambient air quality standard (**NAAQS**) program, which addresses pervasive pollution that endangers public health and welfare. NAAQS have been established for a number of pollutants, including particulate matter and ozone. For each of these pollutants, NAAQS are set at certain levels and areas that do not meet one or more of the NAAQS are known as non-attainment areas and must comply with a number of special requirements. NAAQS are to be reviewed and revised as appropriate at least every five years. In recent years EPA has made a number of decisions regarding the NAAQS program that have been the subject of controversy and litigation, and may have important implications for future regulation under the CAA. Regulation and enforcement of new standards for particulate matter and ozone will affect many power plants, especially in non-attainment areas, and significant emissions control expenditures may be required to meet these current and emerging standards.

Clean Air Interstate Rule. The Clean Air Interstate Rule (**CAIR**) is a program for approximately 28 eastern states, including West Virginia, that contribute to downwind states nonattainment of NAAQS. CAIR applies to sulfur dioxide and NO_x. It interacts with, and in some cases supersedes, other existing programs under the CAA such as the Acid Rain program, the Regional Haze rule and the NO_x SIP Call. The CAIR requires states to revise their State Implementation Plans (**SIPs**) to reduce emissions of sulfur dioxide and NO_x. The CAIR has been the subject of litigation since its promulgation, which resulted ultimately in it being vacated by a federal appeal court. It is currently unclear how EPA will modify the CAIR in response. The existing CAIR, however, is generally expected to require many coal-fueled power plants to install additional pollution control equipment or to incur other costs, and further changes to the CAIR rules may increase these burdens. All of the foregoing could adversely affect the purchase of our coal by customers.

Clean Air Mercury Rule. In 2005, the Clean Air Mercury Rule (**CAMR**) became the first regulation to directly address mercury contamination. The rule would have applied to new and existing coal-fueled electric utility steam generating units nationwide and creates a cap-and-trade system. Each affected unit

Table of Contents

would be required to have a continuous emission monitoring system or an effective long-term system that can trap an uninterrupted sample of mercury, and maintain records and report periodically to demonstrate compliance with the mercury limits. The rule, however, was recently vacated during litigation, and EPA has announced plans for a new rule. Separate state standards may also be passed. Regardless of whether these or other measures are implemented, rules imposing stricter limitations on mercury emissions from power plants may adversely affect the demand for coal.

Regional haze. EPA has initiated a regional haze program to address visibility issues in and around national parks and wilderness areas. Among other things, the program requires state permitting authorities to consider the effects of new major facilities on federally protected lands, and may require existing facilities to undertake additional pollution control measures. These limitations could affect the future market for coal.

Climate change

A major by-product of burning coal is carbon dioxide, which is considered a greenhouse gas and generally a source of concern in connection with global warming and climate change. Regulation of greenhouse gases in the United States is currently subject to complicated domestic and international political, policy and economic pressures. As climate change issues become more prevalent, the U.S. and other governments are seeking to respond to these concerns.

For example, in 2007 the United States Supreme Court confirmed that EPA has authority to classify carbon dioxide and other greenhouse gases as pollutants and regulate them under the CAA. On December 15, 2009, EPA issued an endangerment finding that carbon dioxide and five other greenhouse gases endanger the public health and welfare. Together with other proposed rules, this could establish a basis for direct regulation of greenhouse gas emissions from many sources, including coal-fueled power plants. In addition, on October 30, 2009, EPA published a final rule on greenhouse gas emissions reporting, which would cover a wide range of sources including electricity generation. Although coal mines were excluded from this mandatory reporting obligation in the final rule, EPA had originally proposed to include such upstream sources in the regulation and has indicated that it will be revisiting that proposal in 2010. On the legislative side, the proposed federal Clean Energy and Security Act of 2009 was recently introduced in the U.S. Congress that would require national reductions in greenhouse gas emissions and would require utilities to generate a certain percentage of their electricity supply from renewable sources. A number of state and regional greenhouse gas initiatives are also being developed. Thus, on May 13, 2010, EPA issued a final rule that establishes thresholds for greenhouse gas (GHG) emissions. This rule defines when permits under the New Source Review, Prevention of Significant Deterioration (PAD) and Title V Operating Permit programs are required for new and existing industrial facilities. This final rule tailors the requirements of these CAA permitting programs to limit which facilities will be required to obtain PAD and Title V permits, generally to those with a potential to emit 25,000 tons per year or more. This includes coal-fueled power plants and other coal-fueled industrial production facilities. This means that although we may not be directly affected by this new permitting initiative in the near term, our customers could be.

This increasing governmental focus on global warming could result in new environmental regulations that may negatively affect us and our customers. Future regulation of greenhouse gases in the United States could occur pursuant to future U.S. treaty obligations, regulatory changes under the CAA or other existing legislation, federal, state or regional adoption of greenhouse gas regulatory schemes, or any combination of the foregoing or otherwise. This could cause us to incur additional direct costs in complying with any new regulations, as well as increased indirect costs resulting from our customers incurring additional compliance costs and potentially reducing their consumption of coal. These costs may materially adversely impact our U.S. coal operations.

Clean Water Act (CWA) and Safe Drinking Water Act (SDWA)

The CWA establishes a number of programs designed to restore and protect the quality of U.S. waters by eliminating the discharge of pollutants into surface waters. These programs include the National Pollutant

Table of Contents

Discharge Elimination System permit program (**NPDES**), the dredge and fill permit program and municipal wastewater treatment programs. Coal extraction and related activities subject to the West Virginia SCMRA and Water Pollution Control Act are exempt from certain of these requirements.

The NPDES system implements CWA's prohibition on unauthorized discharges by requiring a permit for every discharge of pollutants from a point source to navigable waters of the United States. NPDES permits give the permittee the right to discharge specified pollutants from specified outfalls, usually for a period of five years. The permit normally sets numerical limits on the discharges and imposes conditions on the permittee (including filing periodic discharge and monitoring reports); discharges that require a permit include industrial process wastewater, non-contact cooling water and collected or channeled storm water runoff. The CWA also requires many facilities to develop and maintain plans for preventing and responding to spills of hazardous substances, called Spill Prevention Control and Countermeasure (**SPCC**) Plans, and certain high-volume hazardous substance handling/storage facilities are required to prepare and maintain a more extensive plan called a Facility Response Plan.

EPA has delegated NPDES permitting authority to West Virginia. West Virginia water pollution law is generally broader than that of its federal counterparts. For example, among other things, state law regulates discharges into all waters of the state, including groundwater, and requires permits for the construction of disposal systems.

Coal companies are required to obtain CWA 404 Permits from the Corps generally authorizing the disposal of fill material from coal mining activities into the waters of the United States, for the purpose of creating slurry ponds, water impoundments, refuse disposal areas, valley fills for excess spoil disposal, and other mining activities. 404 Permits have been the subject of repeated court challenges, and in recent years both nationwide and individual permits have been invalidated, including in West Virginia. Although it is still possible to receive such permits, since implementation of a new federal oversight initiative in June 2009, very few 404 Permits have been issued. It is widely expected that some pending 404 Permit applications will be denied, or that EPA will exercise its Clean Water Act veto authority over some 404 Permits that are issued by the Corps. Although the Company has no immediate need for new 404 Permits to continue its current mining operations in the short term, some of its future mine plans (including the continuation of existing mines) would require the issuance of such permits to proceed. It is difficult to predict whether, in light of the regulatory environment, such 404 Permits will be issued to us in the future. If we cannot obtain them, our coal production operations in the coming years could be subject to substantial disruption.

On April 1, 2010, EPA issued a Memorandum entitled Detailed Guidance: Improving EPA Review of Appalachian Surface Coal Mining Operations Under the Clean Water Act, National Environmental Policy Act, and the Environmental Justice Executive Order (**Detailed Guidance**). The Detailed Guidance was directed to (among others) the Regional Administrator of EPA Region 3 (the federal office with oversight authority over West Virginia's NPDES program). It applies only to coal mining operations. The Detailed Guidance suggests that the EPA Regional Administrator should exercise his authority to object to any NPDES permit application for a coal mining operation that does not ensure that discharges will be kept below 500 $\mu\text{S}/\text{cm}$ conductivity a standard that, according to several knowledgeable sources, cannot be met for the great majority of mining operations. In addition, EPA Region 3 is now exercising its authority to review all proposed NPDES permits and permit re-issuances for mining operations in West Virginia. Because of this, and due to a new West Virginia DEP policy on implementation of the State's narrative water quality standards, the issuance of new and renewed NPDES permits in West Virginia has been substantially curtailed and/or delayed. It is, as a consequence, not possible to predict with any certainty the ability of mining companies to obtain required NPDES permits for new or expanded mining operations, or renewed permits, or the timing of same.

SDWA primarily targets public water systems, which generally includes any system for the provision of water to the public for human consumption through pipes or other constructed conveyances if such system has at least 15 service connections or regularly serves at least 25 individuals. This broad

Table of Contents

definition can include informal and transient water systems (e.g., businesses such as coal mining operations having their own wells or water supplies for on-site workers). West Virginia state law prohibits the installation or establishment of any system or method of drainage, water supply or sewage disposal without first obtaining a permit from the Bureau of Public Health. The Department of Health and Human Resources has promulgated rules which adopt the National Drinking Water Regulations under the SDWA. These rules, among other things, require chlorination of public water systems and set fluorination standards.

Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)

CERCLA is designed to address comprehensively the problems associated with contaminated land, especially inactive and abandoned hazardous waste sites, listed on the National Priorities List (**NPL**). Many states maintain analogous programs.

CERCLA's central provisions authorize EPA to clean up these sites using money from the so-called Superfund (generated by tax revenues) and then to recover the cleanup costs from so-called potentially responsible parties (**PRPs**) who have contributed to the contamination. In addition, private parties may implement EPA-approved cleanups.

Under CERCLA a PRP's liability is strict, joint, several and retroactive; in other words, liability may be imposed regardless of fault, may relate to historical activities or contamination, may require one party to bear the costs of the entire cleanup and has no requirement that the party's activities or hazardous substances have actually caused the contamination. Categories of liable parties under CERCLA include current owners, lessees and operators, former owners, lessees and operators, waste generators or arrangers, and transporters. Accordingly, it is possible for us to become subject to investigation or cleanup obligations (or related third-party claims) in connection with onsite or offsite contamination issues, including those caused by predecessors.

CERCLA contains a cost recovery provision generally authorizing one PRP to initiate a private claim against another PRP for cleanup liabilities.

Other U.S. environmental, health and safety laws

We are or may be required to comply with a number of additional federal, state and local environmental, health, safety and similar requirements in addition to those discussed above, including, for example, the Resource Conservation and Recovery Act (**RCRA**), Toxic Substances Control Act (**TSCA**), the Emergency Planning and Community Right-to-Know Act (**EPCRA**), Occupational Safety and Health Act (**OSHA**), Endangered Species Act (**ESA**) and others.

EU REACH

On 1 June 2007, the European Union enacted regulations on the registration, evaluation, authorization and restrictions on the use of chemicals, known as REACH. The purpose of REACH is to ensure a high level of protection of human health and the environment, including the promotion of alternative methods of assessment of hazards of chemical substances.

REACH requires foreign manufacturers importing their chemical substances into the European Union, as well as E.U. manufacturers producing such substances in quantities of one tonne or more per year, to register these substances with the European Chemicals Agency (**ECHA**). To comply with REACH requirements, we have created dedicated internal working groups, procured external consultants' advice and budgeted for REACH procedures expenses. We

pre-registered with the ECHA substantially all of the substances that we export to or produce in the European Union prior to December 1, 2008. As a next step, we successfully registered with the ECHA the substances that we export to or produce in the European Union in amount over 1000 metric tonnes per year, and which are subject to REACH registration, namely: ferroalloys, coke-chemicals and pig iron exported to the European Union, and mill scale produced at Romanian steel mills. This registration was completed prior to December 1, 2010 in compliance with REACH implementation schedule.

Table of Contents

Currently we are preparing for the next stage of the registration process. We intend to complete the registration process within the relevant deadlines.

Item 4A. *Unresolved Staff Comments*

None.

Item 5. *Operating and Financial Review and Prospects*

The following discussion of our financial condition and results of operations should be read in conjunction with our consolidated financial statements and the related notes and other information in this document. This Item 5 contains forward-looking statements that involve risks and uncertainties. Our actual results may differ materially from those discussed in forward-looking statements as a result of various factors, including the risks described in Item 3. Key Information Risk Factors and under the caption Cautionary Note Regarding Forward-Looking Statements.

In this Item 5, the term *domestic* describes sales by a subsidiary within the country where its operations are located. The term *export* describes cross-border sales by a subsidiary regardless of its location. See note 23 to our consolidated financial statements.

History of Incorporation

Mechel OAO was incorporated on March 19, 2003, as a joint-stock company holding shares and interests in the charter capitals of various mining and steel companies owned by Igor Zyuzin, Vladimir Iorich and companies controlled by them. These individuals acted in concert from 1995 until December 2006 pursuant to an Ownership, Control and Voting Agreement which required them to vote in the same way. During the period from March through December 2006, Mr. Iorich disposed of his entire interest in Mechel OAO to Mr. Zyuzin, and the Ownership, Control and Voting Agreement terminated on December 21, 2006.

Business Structure

Segments

We have organized our businesses into four segments:

the mining segment, comprising the production and sale of coal (metallurgical and steam), coke and coking products, iron ore and limestone, which supplies raw materials to our steel segment and also sells substantial amounts of raw materials to third parties, and includes logistical assets, such as our seaports on the Sea of Japan and on the Sea of Azov and our railway transportation assets;

the steel segment, comprising the production and sale of semi-finished steel products, carbon and specialty long products, carbon and stainless flat products, value-added downstream metal products including wire products, forgings and stampings, and our river port on the Kama River, a tributary of the Volga River;

the ferroalloys segment, comprising the production and sale of nickel ore, low-ferrous ferronickel, ferrochrome and ferrosilicon, which supplies raw materials to our steel segment and also sells substantial amounts of raw materials to third parties; and

the power segment, comprising power generating facilities, which supply power to our mining, steel and ferroalloys segments and also sells a portion of the power generated to third parties, and a power distribution

company.

Table of Contents

The table below sets forth by segment our key mining, steel, ferroalloys and power subsidiaries, presented in chronological order by date of acquisition.

Name	Location of Assets	Product/Business	Date Control Acquired	Voting Interest⁽¹⁾%
<i>Mining Segment</i>				
Southern Kuzbass Coal Company	Russia	Coking coal concentrate, steam coal, steam coal concentrate, anthracite concentrate, PCI coal	January 1999	96.6%
Tomusinsk Open Pit Mine	Russia	Coking coal, steam coal	January 1999	74.5%
Korshunov Mining Plant	Russia	Iron ore concentrate	October 2003	85.6%
Port Posiet	Russia	Seaport: coal warehousing and loading	February 2004	97.1%
Mechel-Coke	Russia	Coke	June 2006	100.0%
Moscow Coke and Gas Plant	Russia	Coke and gas works, organic chemicals	October 2006	99.5%
Transkol	Russia	Railway transportation	May 2007	100.0%
Yakutugol ⁽²⁾	Russia	Coking coal, steam coal	October 2007	100.0%
Port Temryuk	Russia	Seaport: coal and metal transshipment	March 2008	100.0%
Port Vanino	Russia	Coal transshipment complex (under construction)	November 2008	100.0%
Mechel Bluestone Inc.	United States	Coking coal, steam coal	May 2009	100.0%
<i>Steel Segment</i>				
Chelyabinsk Metallurgical Plant	Russia	Semi-finished steel products, carbon and specialty long and flat steel products	December 2001	94.2%
Vyartsilya Metal Products Plant	Russia	Wire products	May 2002	93.3%
Beloretsk Metallurgical Plant	Russia	Long steel products, wire products, limestone	June 2002	91.4%
Mechel Targoviste	Romania	Carbon and specialty long steel products, forgings, seized rolled products	August 2002	86.6%
Urals Stampings Plant	Russia	Stampings	April 2003	93.8%
Mechel Campia Turzii	Romania	Long steel products, wire products	June 2003	86.6%
Mechel Nemunas	Lithuania	Wire products	October 2003	100.0%
Izhstal	Russia	Specialty and carbon steel long products, seized rolling and wire products, stampings and forgings	May 2004	88.4%
Port Kambarka	Russia	River port	April 2005	90.4%

Edgar Filing: Mechel OAO - Form 20-F

Ductil Steel	Romania	Carbon steel, low-alloyed steel rolled and wire products	April 2008	100.0%
HBL Holding	Germany	Steel trading and distribution, servicing, cutting and processing steel products, warehousing system	September 2008	100.0%
Laminorul Plant	Romania	Long steel products	February 2010	90.9%
Ferrous Segment				
Southern Urals Nickel Plant	Russia	Ferronickel	December 2001	84.1%
Bratsk Ferroalloy Plant	Russia	Ferrosilicon	August 2007	100.0%
Oriel Resources	Russia, Kazakhstan	Chrome and nickel mining and processing	April 2008	100.0%
Tikhvin Ferroalloy Plant	Russia	Ferrochrome	April 2008	100.0%
Power Segment				
Southern Kuzbass Power Plant	Russia	Electricity generation	April 2007	98.3%
Kuzbass Power Sales Company	Russia	Electricity distribution	June 2007	72.1%
Toplofikatsia Rouse	Bulgaria	Electricity generation and distribution	December 2010	100.0%

- (1) Except where the acquisition date occurred after December 31, 2010 (in which case the percentage is given as of the date of completion of the acquisition), the percentages provided in this table are as of December 31, 2010. Some of our Russian subsidiaries have preferred shares outstanding that have voting rights commensurate with common shares if dividends on those shares have not been paid. We have calculated voting interests by including these preferred shares for subsidiaries where dividends have not been paid.
- (2) Effective as of the end of the first quarter of 2008, the subsoil license to the Elga coal deposit was transferred from Elgaugol to Yakutugol. Elgaugol was liquidated in September 2009.

Table of Contents

Intersegment sales

We are an integrated mining, steel, ferroalloys and power group. Our group companies supply materials to other companies in the same reporting segment or different reporting segments. For example, for the year ended December 31, 2010:

The mining segment supplied approximately 8.6% of the steel segment's iron ore concentrate requirements, approximately 98% of the steel segment's coke requirements, approximately 100% of the power segment's coal requirements and approximately 76% of the ferroalloys segment's coal requirements;

The ferroalloys segment supplied approximately 81% of the steel segment's requirements in ferrochrome, ferrosilicon and ferronickel;

The mining segment supplied approximately 76% of coke for use in the production of ferronickel, ferrochrome and ferrosilicon by the ferroalloys segment;

The steel segment supplies wires, ropes, wire products and other metal products to the mining segment for use in its day-to-day operations; and

The power segment supplied approximately 27% of the group's overall electricity requirements.

The prices at which we record these transfers are based on market prices, and these transactions are eliminated as intercompany transactions for the purposes of our consolidated financial statements. For the purposes of the period-on-period discussion of the results of operations by segments, such transfers are included in segment revenues and cost of goods sold.

Acquisitions

Our acquisitions enhance the vertical and geographical integration of our group and contribute to the growth of our business segments. We have sought to purchase strategic and under-performing assets which we believe offer significant upside potential, particularly as we make capital investments and implement improvements in working practices and operational methods. Immediately following an acquisition, there is a period of time during which we implement our strategies and may not realize their full benefits and, consequently, our margins may be initially adversely affected after an acquisition.

Set out below are our key acquisitions during the periods under review in this section. For more detail see note 3 to our consolidated financial statements. Each of the acquisitions was accounted for using the purchase method of accounting, and the results of operations of each acquired business are included in our consolidated statements of income and comprehensive income from their respective dates of acquisition of control. In certain cases where we acquired our interest in a business over a period of time and control was not acquired until subsequent acquisitions of shares, such acquisitions were accounted for using the equity method of accounting or at cost, as appropriate, until such controlling stake was acquired. The financial information for the periods presented herein may not be directly comparable from period to period due to these acquisitions and their accounting treatment.

Ductil Steel. Ductil Steel is comprised of two Romanian steel plants: a plant in Buzau which produces reinforcing rolled products, wire rod and wire products, and the Otelu Rosu plant, which specializes in steel and billets production. We purchased 100% of Ductil Steel from third parties in April 2008 for \$224.0 million.

Oriel Resources. Oriel Resources is comprised of the Voskhod chrome project and the Shevchenko nickel project in Kazakhstan, and the Tikhvin Ferroalloy Plant in Russia, near St. Petersburg. Mining operations commenced at the Voskhod chrome deposit in December 2008. We acquired a 99.3% stake in Oriel Resources in April 2008 pursuant to a public tender offer and subsequently increased our stake to 100%, for a total cost of approximately \$1.5 billion.

HBL Holding. The assets of HBL Holding include fifteen service and trading companies in Germany. We acquired 100% of HBL Holding in September 2008 for approximately \$55.9 million.

Table of Contents

Bluestone. On May 7, 2009, we acquired 100% of the shares and interests in the Bluestone companies, which were privately-held West Virginia-based coal businesses engaged in the mining, processing and sale of premium quality hard coking coal. The aggregate consideration was \$436.4 million paid in cash, approximately 83.3 million of our preferred shares, plus two contingent payments less the amount exceeding the Bluestone target debt of \$132.0 million. The first contingent payment is a contingent share value right (**CVR**) that guarantees a target total shareholder return from the preferred shares after five years from the closing date. Any potential CVR cash payment due to the actual total return from the preferred shares being less than or equal to the target return will be paid on the fifth anniversary of the closing date and will equal the amount by which the target value exceeds the sum of the aggregate market value of the preferred shares and all dividends received. The starting target value was set at \$989.6 million, which could be increased up to \$1,588.5 million and/or decreased by the amount of any damages (capped at \$200.0 million for CVR purposes) and set-offs effected by Mechel. The target value of the CVR and the target value additional amount increased by \$3.5 million in June 2010 as a result of an agreement between the parties to settle a third party litigation. The increase was to be calculated based on the additional tonnes of mineral reserves or mineral deposits discovered during the drilling program on certain territories leased or owned by Bluestone. The second contingent payment is a contingent cash payment based on additional coal reserves and resources identified within two years under a planned drilling program. The amount of this contingent cash payment is based on certain mineral reserves and mineral resources discovered during the drilling program, multiplied by an agreed price of \$3.04 per tonne, which will be paid on the fifth anniversary of the closing date. Mr. Zyuzin agreed to vote all common shares beneficially owned by him in favor of dividends on preferred shares at any meeting of shareholders. Mechel Mining guaranteed certain obligations of our subsidiaries which were party to the transaction agreements. These guarantee obligations were supported by a pledge of the shares of the Bluestone companies and the newly created Mechel entities that hold these shares.

We determined the target value of the CVR based on an appraisal performed by independent mining engineers. The present value of the CVR target value as of the closing date amounted to \$991.4 million. The contingent liability recognized as of the closing date amounted to \$495.2 million, and was calculated as the difference between the estimated target value and the preferred shares fair value as of May 7, 2009. Our preferred shares were not marketable at the time of the closing date, and they were appraised by an independent third party using the probability-weighted expected return method. The weighted average preferred share value was determined as \$5.96 (196 rubles) as of the closing date. We determined the value of the drilling program contingent payment based on an appraisal performed by independent mining engineers. The estimation was made in conjunction with the estimation of the CVR contingent payment. The present value of the drilling program contingent payment as of the closing date amounted to \$19.4 million. The total fair value of the purchase consideration at the closing date amounted to \$1,447.2 million.

In accordance with ASC 805, we adjust the contingent liability arising from contingent consideration arrangements at the end of each reporting period, with a corresponding gain or loss reflected in the statement of income, based on changes in the fair value of the obligation. The change in the fair value of our preferred shares during the post-acquisition period through December 31, 2009, based on an independent appraisal, resulted in a \$494.2 million decrease in the CVR contingent payment, which was recorded as a non-taxable gain in other income and expenses, net in the consolidated financial statements. This gain was a result of the changes resulting from the events after the acquisitions date, primarily because of the increase in the value of preferred shares following a similar increase in the price of our common shares, and does not constitute a measurement period adjustment that would require adjustment of the purchase consideration.

We completed the listing of the preferred shares on the New York Stock Exchange in May 2010. In March 2011, the market value of the preferred shares distributed as part of the consideration to the former owners of Bluestone plus the cumulative dividends due to them exceeded \$1,787.1 million, as calculated per the terms of the merger agreement, which resulted in the automatic extinguishment of the CVR. Following the automatic extinguishment of the CVR, we executed an amendment to the merger agreement which confirmed that our obligations in relation to the CVR

contingent payment, pledge agreements relating to all the outstanding stock and capital membership in the Bluestone companies in favor of the Seller, and the CVR guarantee issued by Mechel Mining have been released. In addition, Mr. Zyuzin has been released from obligation to vote his common shares in favor of the dividends on preferred shares.

Table of Contents

For a more detailed description of the Bluestone acquisition transaction, see note 3(e) to our consolidated financial statements.

Laminorul Plant. Laminorul Plant is a steel plant located in Braila (Romania) and listed on the Bucharest Stock Exchange. On February 25, 2010, we acquired 100% of the shares of Donau Commodities SRL which holds 90.9% of the shares of Laminorul Plant for consideration of \$11.9 million. The acquisition is consistent with our program of expanding production and sales of steel products, particularly those related to construction and building industries in Romania.

Ramateks. Ramateks is a Turkish steel trading group engaged in the distribution of construction and stainless steel long products as well as other types of steel products. We acquired 100% of Ramateks in June 2010 for \$3.0 million.

Femax. Femax is a trading company operating in the Czech and Slovak markets, selling steel and steel products and providing a number of services. We acquired 95.0% of Femax in July 2010 for \$1.9 million.

Toplofikatsia Rousse. Toplofikatsia Rousse is a power plant located on the bank of the Danube River in close proximity to the harbor of Rousse, Bulgaria. We acquired a 49% stake in Toplofikatsia Rousse in December 2007 for \$73.5 million. We increased our stake in Toplofikatsia Rousse to 100% by purchasing the remaining stake of 51% in December 2010 for approximately \$71.9 million.

Factors Affecting Our Results of Operations and Financial Condition

Cyclical nature of business and impact of macroeconomic factors

Our mining and ferroalloys business sells significant amounts of coal, iron ore and ferroalloys to third parties and our revenues depend significantly on these sales. Cyclical and other changes in the world market prices of these products affect the results of our mining and ferroalloy operations. The changes in these prices result from factors which are beyond our control, such as market supply and demand. The global coal, iron ore and ferroalloys supply and demand balance is strongly influenced by interdependent global economic and industrial demand cycles, as well as supply chain-related constraints such as shipping capacity, availability of rolling stock, transportation bottlenecks, production disruptions and natural disasters. Prices of the products of our mining and ferroalloys business have varied significantly in the past and could vary significantly in the future. See Price trends for products below. See also Item 3. Key Information Risk Factors Risks Relating to Our Business and Industry We operate in cyclical industries, and any local or global downturn, whether or not primarily affecting the mining and/or steel industries, may have an adverse effect on our business, financial condition, results of operations and prospects.

The steel industry is highly cyclical in nature because the industries in which steel customers operate are cyclical and sensitive to changes in general economic conditions. The demand for steel products thus generally correlates to macroeconomic fluctuations in the economies in which we sell our products, as well as in the global economy. The prices of our steel products are influenced by many factors, including demand, worldwide production capacity, capacity utilization rates, raw material costs, exchange rates, trade barriers and improvements in steel-making processes. Steel prices also typically follow trends in raw material prices and increases in market prices for steel may lag behind increases in production costs, including raw materials.

Demand for steel, particularly long steel products in which we believe we are the most competitive in the Russian market, is closely tied to the construction industry in the markets in which we sell our products. The construction business in Russia, the principal market for our products, was severely impacted by the global financial crisis and the sharp economic slowdown in Russia. As a result of the critical role of steel in infrastructural and overall economic development, the steel industry tends to track macroeconomic factors such as gross domestic product (**GDP**) and

industrial output.

The global financial crisis and sharp economic slowdown which started in 2008 seriously impacted global GDP growth in 2008 and 2009 and the recovery has been slow in 2010. Global GDP grew at 1.5% in 2008, contracted by 2.2% in 2009 and grew at 3.9% in 2010, according to CRU. According to Rosstat, Russia recorded GDP growth of 5.2% in 2008, contraction of 7.8% in 2009 and growth of 4.0% in 2010. This slowdown in economic growth and severe constraints in capital spending, both globally and in Russia, led to

Table of Contents

poor demand for our products and a substantial decrease in the prices for our products in 2009. We generally observed signs of improvement in our core markets in the 2010, which are continuing into 2011. See Price trends for products.

Trade and competition

Mining products and many types of steel products are considered commodities and treated as fungible in the world markets. As such, we compete with steel producers and mining companies with operations in different countries. The main competitive advantages that steel producers can secure are based on quality and production cost. Generally, steel producers in economically developed regions compete primarily based on quality of steel, while we and other steel producers in developing countries compete in the international market based primarily on price. With respect to our mining products, such as iron ore, nickel and coal, quality, production costs and transportation capabilities are key areas where companies seek a competitive advantage.

As the production and consumption of steel are closely linked to economic development and industrial capacity in general, many countries have enacted measures to protect their domestic steel industries from international competition, particularly from countries with a lower average cost of production. Several key steel importing countries currently have import restrictions in place on steel products or intend to introduce them in the future. See Risk Factors Risks Relating to Our Business and Industry We face numerous protective trade restrictions in the export of our steel products and ferroalloys, and we may face export duties in the future.

The European Union has a quota system in place with respect to Russian steel imports, which affected our exports to ten countries in Central and Eastern Europe in the periods under review. Our sales in the European Union constituted approximately 16.8% of our steel segment revenues and 51.3% of our steel segment export revenues in 2010, 17.9% of our steel segment revenues and 50.6% of our steel segment export revenues in 2009, and 24.0% of our steel segment revenues and 37.0% of our steel segment export revenues in 2008. The effect of the quota system is significantly mitigated, however, because a substantial majority of our sales in the European Union are made by our European subsidiaries, particularly Ductil Steel in Romania and HBL Holding in Germany.

In addition, the European Union has imposed antidumping duties on certain of our exports. In February 2008, an antidumping duty in the amount of 17.8% was imposed on exports to the European Union of ferrosilicon produced by our Bratsk Ferroalloy Plant for a period of five years. In addition, an antidumping E.U. import duty in the amount of 50.7% was applicable to steel ropes and cables manufactured by our Beloretsk Metallurgical Plant until October 2007. After a review procedure conducted by the European Union, in October 2007, this duty was reduced to 36.2% and imposed for a period of five years.

At the same time, we are protected from competition from steel imports in Russia due to import tariffs that Russia has in place with respect to certain imported steel products. These tariffs generally amount to 5-15% of the value of the imports. The majority of our sales of steel products in Russia in the periods under review were protected by these import tariffs. The Republic of Belarus, the Republic of Kazakhstan and the Russian Federation entered into a Customs Union and implemented a Common Customs Tariff, which came into force on January 1, 2010, reducing import duties on stainless rolled products from 15% to 10%. In the future the Russian government may restore export duties on steel products and may also impose export duties on some raw materials, such as coal and iron ore concentrate. See Risk Factors Risks Relating to Our Business and Industry We benefit from Russia's tariffs and duties on imported steel, which may be eliminated in the future.

Consolidation trends in the steel and mining industries

The global financial crisis sharply slowed the pace of consolidation in the steel industry. The uncertainty over future demand, together with continuing constraints on capital, were two of the greatest challenges that steel companies

faced in 2009. China is an exception where internal consolidation activity in the steel industry is, in part, driven by the central government's plan to consolidate its capacity. A main trend of 2010 is the

Table of Contents

increasing dominance of strategic investors in the coal sector. Strategic investors show preference for large coal deposits. Future consolidation in the steel industry should enable steel producers to maintain more consistent performance through cycles in the steel industry by achieving greater efficiency and economies of scale.

We, along with other Russian steel producers, tend to focus on vertical integration rather than consolidation, which ensures access to a stable supply of raw materials, particularly coking coal and iron ore. Our vertical integration helps us to better manage the effects of raw material supply constraints and also provides us with an opportunity to capture higher margins in sales by our mining segment to third parties.

The mining industry has also experienced consolidation in recent years. Although the activity in this sector substantially decreased in 2009, there were several large-scale transactions. Foundation Coal Holdings, Inc, a U.S. coal company, signed a definitive agreement to be acquired by another U.S. coal company Alpha Natural Resources. Ukrainian iron and steel producer Metinvest Holding Limited acquired United Coal Company, a U.S. based mining company. Arch Coal Inc, a listed U.S. based coal producer, agreed to acquire the Jacobs Ranch coal mine from Rio Tinto plc. Additionally, we acquired Bluestone. In 2010, Walter Energy, a U.S. coal company, signed a merger agreement with Western Coal, another U.S. coal company. INR Energy, a privately held coal company, entered into an agreement to sell its West Virginia coal mining operations to Cliffs Natural Resources, an international mining company. Cumberland Resources, a U.S. privately held coal producer, was acquired by Massey Energy, a U.S. company and one of the largest producers of Central Appalachian coal.

Consolidation among suppliers in the mining industry has led to a stronger bargaining position among mining companies vis-à-vis steel producers. As we are vertically integrated in both the upstream and downstream sides of the mining and steel segments, we are not as affected by consolidation among suppliers as some of our competitors.

Price trends for products

Coking coal and steam coal

Average contract prices for premium hard coking coal in calendar year 2010 were at \$191 per tonne (FOB Australia), up from \$129 per tonne (FOB Australia) in JFY 2009/2010, according to CRU. The average price for JFY 2008/2009 was \$300 per tonne on the same basis, according to CRU. Decreasing steel demand and production in the first half of 2009 led to a reduction in hard coking coal spot prices to a level of around \$115 per tonne (FOB Australia) in May 2009 from \$400 per tonne (FOB Australia) in the middle of 2008, according to CRU. The situation gradually changed from the middle of 2009. Growing global demand for steel led to an increase in demand for imported coking coal in Japan, South Korea and European countries. Unprecedented growth of coking coal imports to China, coupled with imported coal supply shortage, contributed to the hard coking coal spot price reaching \$170 per tonne (FOB Australia) by the end of 2009, and \$220 per tonne (FOB Australia) in the first quarter of 2010, according to CRU. The hard coking coal spot price increased during the beginning of 2010 and reached \$250 per tonne (FOB Australia) in April. Till the end of the year prices have declined to \$225 per tonne (FOB Australia), according to CRU. There was no significant volatility in spot prices in 2010 due to the stable development of global steel industry. Minor price fluctuation occurred due to seasonal factors and traders stocking activity.

Prices for steam coal reached a high of \$209 per tonne (CIF Amsterdam/Rotterdam/Antwerp) in July 2008 from a low of \$69 per tonne in January 2007, according to Platts. As the global financial crisis began in September 2008, demand for steam coal was suddenly reduced and the spot prices fell to \$62 per tonne (CIF Amsterdam/Rotterdam/Antwerp) by March 2009, according to Platts. Subsequently, prices began to rise as a result of the global economy recovering. Prices reached \$80 per tonne (CIF Amsterdam/Rotterdam/Antwerp) by the end of 2009, according to Platts. At the beginning of 2010, prices reached \$86 per tonne (CIF Amsterdam/Rotterdam/Antwerp) and then declined to \$73 per tonne (CIF Amsterdam/Rotterdam/Antwerp) by the end of the first quarter of 2010, according to Platts. Prices

increased further during 2010 and reached \$122 per tonne (CIF Amsterdam/Rotterdam/Antwerp) at end of 2010, according to Platts. The main reason of price growth was stable growth of the global economy.

Table of Contents*Iron ore*

For JFY 2010/2009 the contract price for iron ore settled at \$113 per tonne, up from \$57 per tonne in JFY 2009/2008 (63% elemental iron, Carajas fines, FOB Brazil), according to AME. The price for JFY 2008/2007 for iron ore was \$79 per tonne on the same basis, according to AME. Decreasing steel demand and production in the first half of 2009 led to a reduction in iron ore spot prices to a level of around \$64 per tonne (CFR China) in April 2009 from \$207 per tonne in March 2008, according to CRU. The situation gradually changed from the middle of 2009, when growing global production of steel coupled with strong demand for imported iron ore from China pushed prices to the level of \$105 per tonne (CFR China) by the end of 2009 and \$142 per tonne (CFR China) by the end of the first quarter of 2010, according to CRU. Prices increased further during 2010 and reached \$186 per tonne (CFR China) in April, then after a decline in the middle of the year prices begin to rise again and reached \$173 per tonne (CFR China) at end of 2010, according to CRU. The main reasons of price growth in 2010 were stable demand for ore imports from China and measures of the Indian government restricting iron ore exports.

Nickel

On the London Metal Exchange (LME) the cash nickel price reached a high of \$31,225 per tonne in March 2008 and a low of \$9,696 per tonne in December 2008, according to CRU. Nickel prices started to increase in April 2009 and increased to 17,066 per tonne at the end of 2009, according to CRU. This increase was primarily driven by strong demand from China and other Asian countries. Nickel price increased further during 2010 and reached \$24,111 per tonne at the end of 2010, according to CRU, since the demand for nickel in Asia and in the rest of the world was steadily improving.

Ferrochrome

Ferrochrome prices reached a high of \$6,173 per tonne of chrome content (spot high-carbon ferrochrome price; Delivered consumers works (delivered) Europe) in May 2008 and a low of \$1,411 per tonne of chrome content in April 2009, according to CRU. The price started to increase in May 2009 and reached \$1,940 per tonne of chrome content (spot delivered Europe) by the end of 2009, according to CRU. Prices increased generally due to strong demand from Asian stainless steel producers and limited supply. Prices increased further during 2010 and reached \$2,668 per tonne of chrome content (spot delivered Europe) by the end of 2010, according to CRU, since the demand in all the regions has substantially improved.

Ferrosilicon

Ferrosilicon prices reached a high of \$2,300 per tonne (ferrosilicon with 75% silicon content; CIF Japan) in June 2008 and a low price of \$1,085 per tonne in December 2008, according to CRU. The price gradually increased during 2009, driven by increases in production costs and improved demand, and reached \$1,280 per tonne (CIF Japan) at the end of 2009, according to CRU. Prices increased further during 2010 and reached \$1,625 per tonne (Chinese export FOB) by the end of 2010, according to CRU. The surge in ferrosilicon prices in the last months of 2010 was driven by curtailments in power supplies of Chinese ferrosilicon producers, due to the Chinese governments five-year energy-saving plan.

Steel

The price of rebar increased to a high of \$1,305 per tonne (Russian domestic market, ex-warehouse) in July 2008, and fell to a low of \$405 per tonne in April 2009, according to Metal-Courier. The export price of square billets reached a high of \$1,180 per tonne (Russian export, FOB Black/Baltic sea) in June 2008, and fell to a low of \$311 per tonne in March 2009, according to Metal-Courier. The prices for steel products increased gradually during 2009, driven by

stable demand and increases in production costs, reaching \$494 per tonne for rebar in the Russian domestic market and \$419 per tonne for square billets (Russian export) at the end of 2009, according to Metal-Courier. Prices increased further during 2010 and reached \$639 per tonne for rebar in the Russian domestic market and \$600 per tonne for square billets (Russian export) at the end of

Table of Contents

2010, according to Metal-Courier. The price increase was driven by increasing raw materials costs and steadily improving demand. Russian domestic rebar consumption grew by 23.6% in 2010, according to Metal-Courier.

Freight costs

Ocean freight charges and rates on the basic world routes grew steadily from 2007 until autumn 2008. In autumn 2008, these rates fell sharply, simultaneously with a decrease in prices for the basic groups of mass cargoes, in particular, coal, metal, scrap metal and ore raw materials. For example, an average time-charter rate on Panamax type vessels (deadweight about 77,000 tonnes) fell more than 90% from \$90,000 in May 2008 to \$6,000-\$8,000 in November 2008. In April 2009, the rate increased due to an increase in trading demand for certain groups of cargoes. During 2010, time-charter rates fluctuated within the range from \$20,000 to \$30,000 per day and by the end of the year fell to \$12,000-\$15,000 per day due to an excess supply of new vessels entering the market. Due to the risk of the U.S. dollar falling against world currencies and the probable increase in commodities prices, we expect an increase in demand for commodities transportation. An increase in such demand, in conjunction with a possible increase in oil prices, may result in an increase in freight rates which will affect our freight costs.

Freight costs are a significant concern for Russian steel producers and mining companies, as distances in Russia are vast and major steel producing and mining areas tend to be located far from developed year-round port facilities. In addition to geographical challenges, domestic Russian rail freight shipments are carried out by Russian Railways, a government-controlled monopoly, so there is no downward pressure on rail freight rates due to market competition, unlike in countries where multiple freight carriers compete based on price.

Exchange rates

Our products are typically priced in rubles for Russian and CIS sales and in U.S. dollars or euros for international sales. Our direct costs, including raw materials, labor and transportation costs are largely incurred in rubles and other local currencies, while other costs, such as interest expense, are incurred in rubles, euros and U.S. dollars. The mix of our revenues and costs is such that depreciation in real terms of the ruble against the U.S. dollar tends to result in a decrease in our costs relative to our revenues, while appreciation of the ruble against the U.S. dollar in real terms tends to result in an increase in our costs relative to our revenues.

Table of Contents**Results of Operations**

The following table sets forth our consolidated statement of income data for the years ended December 31, 2010, 2009 and 2008.

Revenues	Year Ended December 31,					
	2010	2009		2008		
	Amount	% of Revenues	Amount	% of Revenues	Amount	% of Revenues
(In thousands of U.S. dollars, except for percentages)						
Revenue, net	9,746,036	100.0%	5,754,146	100.0%	9,950,705	100.0%
Cost of goods sold	(6,149,310)	(63.1)%	(3,960,693)	(68.8)%	(5,260,108)	(52.9)%
Gross profit	3,596,726	36.9%	1,793,453	31.2%	4,690,597	47.1%
Selling, distribution and operating expenses	(2,064,520)	(21.2)%	(1,547,809)	(26.9)%	(2,134,328)	(21.4)%
Operating income	1,532,207	15.7%	245,644	4.3%	2,556,269	25.7%
Other (expense) income, net	(563,576)	(5.8)%	(150,420)	(2.6)%	(1,208,001)	(12.1)%
Income from continuing operations, before income tax	968,630	9.9%	95,224	1.7%	1,348,268	13.5%

Net income attributable to non-controlling interests	(34,761)	(0.4)%	(2,590)	(0.0)%	(88,837)	(0.9)%
Net income attributable to shareholders of Mechel OAO	657,213	6.7%	73,741	1.3%	1,140,544	11.5%
Dividends on preferred shares	(8,780)	(0.1)%	(134,498)	(2.3)%		0.0%
Net (loss) income attributable to common shareholders of Mechel OAO	648,433	6.7%	(60,757)	(1.1)%	1,140,544	11.5%

Year ended December 31, 2010 compared to year ended December 31, 2009*Net revenues*

Consolidated revenues increased by \$3,991.9 million or 69.4% to \$9,746.0 million in the year ended December 31, 2010, from \$5,754.1 million in the year ended December 31, 2009.

Across our segments, our acquisitions in the year ended December 31, 2010 did not have significant impact on our consolidated revenues. Approximately, \$37.0 million, or less than 0.1%, of our consolidated revenues in the year ended December 31, 2010 was due to the consolidation of companies acquired during the year ended December 31, 2010. This includes sale of steel products produced by Laminorul Plant for \$32.7 million and sale of electricity and heat from Toplofikatsia Rousse for \$4.4 million. The rest of the sales increase was due to the increase of sales prices and volumes across all our segments, including due to increase of sales volumes of products which we purchased on the market and re-sold to related metallurgical plants, as well as volumes of finished goods produced by these companies and other third party suppliers and sold by us to third parties, which were added to our consolidated revenue for the year ended December 31, 2010. The total effect of such transactions on consolidated revenues in the year ended December 31, 2010 was \$1,493.1 million, or 26.7% of steel segment revenues, including \$201.2 million in revenues for goods we purchased from third parties and sold to related metallurgical plants and \$1,051.2 million in revenues for goods we purchased from related metallurgical plants and further sold to third party customers.

Table of Contents

The following table sets forth our net revenues by segment, including a breakdown by sales to third parties and other segments:

Net Revenues by Segment	Year Ended December 31, 2010 2009 (In thousands of U.S. dollars, except percentages)	
Mining segment		
To third parties	3,050,950	1,713,245
To ferroalloys segment	140,024	63,197
To power segment	42,485	27,510
To steel segment	622,706	308,039
Total	3,856,165	2,111,990
Steel segment		
To third parties	5,586,224	3,143,282
To ferroalloys segment	4,961	2,729
To power segment	128,304	122,231
To mining segment	114,188	34,060
Total	5,833,677	3,302,302
Ferroalloys segment		
To third parties	455,199	363,652
To power segment	516	450
To steel segment	173,337	66,707
Total	629,052	430,809
Power segment		
To third parties	653,663	533,968
To steel segment	269,342	233,327
To ferroalloys segment	65,873	41,861
To mining segment	73,800	63,628
Total	1,062,678	872,784
Eliminations	1,635,536	963,738
Consolidated revenues	9,746,036	5,754,146
% from mining segment	31.3%	29.8%
% from steel segment	57.3%	54.6%
% from ferroalloys segment	4.7%	6.3%
% from power segment	6.7%	9.3%

Mining segment

Our total mining segment sales increased by \$1,744.2 million, or 82.6%, to \$3,856.2 million in the year ended December 31, 2010 from \$2,112.0 million in the year ended December 31, 2009.

Coking coal concentrate sales to third parties increased by \$919.2 million, or 170.8%, to \$1,457.5 million in the year ended December 31, 2010 from \$538.3 million in the year ended December 31, 2009 as a result of sales prices increase of \$536.9 million and sales volumes increase of \$382.3 million. The sales prices increase is explained by the sharp increase in international coking coal prices from July 2009 to the end of 2010, when the spot coking coal price (price for premium hard coking coal, FOB Australian ports) increased by 96% from \$115 per tonne in June 2009 to \$225 per tonne in December 2010, according to CRU.

Table of Contents

The volume of coking coal concentrate sold to third parties increased by 3,444 thousand tonnes, or 71.0%, to 8,292 thousand tonnes in the year ended December 31, 2010 from 4,848 thousand tonnes in the year ended December 31, 2009. The increase in sales volumes during the period was due to increased demand from both domestic and foreign customers. In the market there is a shortage of coking coal, which worsens annually during periods of flooding in Australia.

The volumes of coking coal sold to third parties increased both at Yakutugol s and Bluestone, while they decreased at Southern Kuzbass Coal Company. Yakutugol s coking coal sales volumes increased by 2,367 thousand tonnes or 157.4% from 1,504 thousand tonnes to 3,871 thousand tonnes. Southern Kuzbass Coal Company s coking coal sales volumes decreased by 18 thousand tonnes, or 0.77%, from 2,358 thousand tonnes to 2,340 thousand tonnes. Bluestone coking coal sales volumes to third parties increased from 986 thousand tonnes in the year ended December 31, 2009 to 2,075 thousand tonnes in the year ended December 31, 2010. Bluestone was acquired in May 2009.

Coke sales to the third parties increased by \$221.1 million, or 159.5%, to 359.8 million in the year ended December 31, 2010 from \$138.7 million in the year ended December 31, 2009, as a result of sales prices increase of \$171.0 million, and sales volumes increase of \$50.1 million. The increase in sales prices was driven by the increase in coking coal prices which is the key raw material in the production of coke. The sales volume increase is explained by the increase in production volumes of Moscow Coke and Gas Plant and Mechel-Coke in response to improved demand in connection with the global economic recovery after the global economic slowdown.

Coke supplied to the steel segment increased by \$245.8 million, or 86.2%, to \$531.0 million in the year ended December 31, 2010 from \$285.2 million in the year ended December 31, 2009, where \$223.1 million of the increase was due to an increase of sales prices and the rest was due to the increase of sales volumes of \$22.8 million. The increase of sales volumes was due to the increase of raw steel production in our steel segment companies in 2010 due to the revival of demand for the steel products after the global economic slowdown.

Coking products sales to third parties increased by \$26.1 million, or 115.1%, to \$48.7 million in the year ended December 31, 2010 from \$22.6 million in the year ended December 31, 2009 as a result of sales prices increase of \$15.4 million and sales volume increase of \$10.7 million. The reasons of the increase in sales prices and volumes are the same as for coke.

Anthracite and PCI coal sales to third parties increased by \$265.6 million, or 932.2%, to \$294.0 million in the year ended December 31, 2010 from \$28.5 million in the year ended December 31, 2009 as a result of sales prices increase of \$159.0 million and sales volumes increase of \$106.5 million. The sales prices and volumes increased due to the restoration after the recovery of global economy and increased steel production that uses anthracite and PCI coal.

Steam coal sales to third parties decreased by \$254.2 million, or 41.3%, to \$360.6 million in the year ended December 31, 2010 from \$614.8 million in the year ended December 31, 2009 as a result of sales volumes decrease of \$297.1 million that was partially offset by the sales price increase of \$42.9 million. The sales price increase was due to an increase in international steam coal prices from July 2009 to the end of 2010, when the spot steam coal price (price for 6,000 kCal/kg basis coal, CIF NW Europe) increased by 77% from \$66 per tonne in June 2009 to \$122 per tonne in December 2010, according to Platts. The decrease in sales volumes was mainly due to the decrease of steam coal export sales to the Chinese market, where demand was significantly lower in 2010 in comparison to 2009. Steam coal sales volume to China decreased from 1,333 thousand tonnes in the year ended December 31, 2009 to 258 thousand tonnes in the year ended December 31, 2010.

Steam coal supplied to the power and ferroalloy segments increased by \$9.1 million, or 35.7%, to \$34.5 million in the year ended December 31, 2010 from \$25.4 million in the year ended December 31, 2009 mainly as a result of sales volume increases. The consolidation of Toplofikatsia Rouse in December 2010 resulted in an increase of sales

volumes of \$4.4 million. The rest of the increase is explained by the increase

Table of Contents

of steam coal consumption at the Southern Kuzbass Power Plant due to the increase of electricity production in the year ended December 31, 2010 in comparison to the year ended December 31, 2009.

Sales of iron ore to third parties increased by \$105.8 million, or 45.4%, to \$338.8 million in the year ended December 31, 2010 from \$233.0 million in the year ended December 31, 2009 as a result of sales prices increase of \$136.8 million that was partially offset by the sales volumes decrease of \$31.0 million. The sales prices increase was due to increase in international iron ore prices from July 2009 to the end of 2010, when the spot iron ore price (price for Indian iron ore 63% Fe dry, CFR North China port) increased by 90% from \$91 per tonne in July 2009 to \$173 per tonne in December 2010, according to AME. The decrease in sales volumes was due to the decrease of demand from Chinese and Russian steel producers.

Supplies of iron ore to the steel segment increased by \$34.2 million, or 334.3%, to \$44.5 million, in the year ended December 31, 2010 from \$10.2 million in the year ended December 31, 2009 as a result of sales volumes increase of \$13.2 million and increase of sales prices of \$21.1 million. The increase of sales volumes is explained by the increase of raw steel production in our steel segment companies in 2010 due to the revival of demand for the steel products after the global financial crisis.

Excluding intersegment sales, export sales were 65.6% of mining segment sales in the year ended December 31, 2010, compared to 63.6% in the year ended December 31, 2009. The increase in the proportion of our export sales was due to the higher export volumes of coking coal concentrate due to higher sales prices on export markets. Average coking coal concentrate export prices on Free Carrier (FCA) basis in the year ended December 31, 2010 comprised \$154.7 per tonne in comparison with \$137.1 per tonne for average domestic sales prices on FCA basis.

Steel segment

Our steel segment revenues increased by \$2,531.4 million, or 76.7%, to \$5,833.7 million in the year ended December 31, 2010, from \$3,302.3 million in the year ended December 31, 2009. Steel segment sales in 2010 were generally influenced by the global recovery after depressed economic and financial conditions in Russia and worldwide in 2009. Consumption of steel products in Russia increased by 37.7% in the year ended December 31, 2010 to 37.6 million tonnes from 27.3 million tonnes in the year ended December 31, 2009, according to Metal Expert. However, production of steel products (including semi-finished) in Russia in the same period increased only by 10.6% to 59.7 million tonnes from 54.0 million tonnes. Export shipments of steel products (including semi-finished) from Russia decreased by 10.9% in the year ended December 31, 2010 to 27.3 million tonnes from 30.0 million tonnes in the year ended December 31, 2009, while export sales of finished steel products from Russia decreased by 16.6%.

Our steel segment revenues increased significantly due to the increase of sales volumes of goods which we purchased on the market and re-sold to related metallurgical plants, as well as volumes of goods produced by these companies and third parties which were sold by our trading subsidiaries to third parties. These sales amounted to \$1,493.1 million in the year ended December 31, 2010 in comparison to the \$128.3 million in the year ended December 31, 2009, including the sales of goods to related metallurgical plants and the sales of goods purchased from related metallurgical plants of \$1,252.4 million in the year ended December 31, 2010 and \$120.8 million in the year ended December 31, 2009.

Semi-finished products sales increased by \$738.6 million, or 148.7%, to \$1,235.4 million in the year ended December 31, 2010 from \$496.8 million in the year ended December 31, 2009 as a result of sales volumes increase of \$436.7 million as well as sales prices increase of \$301.9 million. The sales prices increased due to growth in international prices for billets and slabs; since billet price (square billet, FOB Black Sea) increased by 55% from \$388 per tonne in June 2009 to \$600 per tonne in December 2010, according to Metal Expert. The increase of sales volumes

was due to the increase of volumes of semi-finished products which we purchased on the market and re-sold to related metallurgical plants of \$783.0 million.

Alloyed long products sales increased by \$157.9 million, or 230.1%, to \$226.5 million in the year ended December 31, 2010 from \$68.6 million in the year ended December 31, 2009 as a result of sales prices increase of \$28.0 million and sales volumes increase of \$129.9 million. The increase in sales prices was

Table of Contents

mainly driven by the increase in the prices of steelmaking raw materials (iron ore, coking coal etc.). The increase in sales volumes is explained by the strengthening of demand in the domestic market in 2010.

Rebar sales increased by \$272.8 million, or 31.1%, to \$1,150.3 million in the year ended December 31, 2010 from \$877.5 million in the year ended December 31, 2009 as a result of sales prices increase. The increase in sales prices was driven by a sharp increase in domestic and international prices during the covered period, when rebar price (Russia domestic, ex-warehouse, central region, excl. VAT) increased by 46% from \$472 per tonne in August 2009 to \$688 per tonne in August 2010, according to Metal Expert.

Wire-rod sales increased by \$84.0 million, or 41.3%, to \$287.5 million in the year ended December 31, 2010 from \$203.5 million in the year ended December 31, 2009 as a result of sales prices increase of \$65.0 million and sales volumes increase of \$19.0 million. The increase in sales prices was driven by the increase in domestic and international prices during the covered period, when wire-rod price (Russia domestic, ex-warehouse, central region, incl. VAT) increased by 43% from \$458 per tonne in August 2009 to \$657 per tonne in August 2010, according to Metal Expert. The increase in sales volumes is explained by increased domestic shipments and competitive pricing in domestic markets.

Low alloyed engineering steel sales increased by \$207.0 million, or 76.5%, to \$477.5 million in the year ended December 31, 2010 from \$270.5 million in the year ended December 31, 2009 as a result of sales prices increase of \$145.2 million and sales volumes increase of \$61.8 million. The increase in sales prices was driven by the increase in the prices of steelmaking raw materials (iron ore, coking coal etc.). The increase in sales volumes is explained by high demand in key consuming industries, such as automotive and machine building industries in Russia and abroad.

Stainless flat products sales increased by \$100.7 million, or 97.6%, to \$203.9 million in the year ended December 31, 2010 from \$103.2 million in the year ended December 31, 2009 as a result of sales prices increase of \$37.3 million and sales volumes increase of \$63.4 million. The increase in sales prices was driven by the increase in domestic prices during the covered period, when price for stainless flat steel (cold-rolled, 08X18H10T steel grade, 2-3 mm, Russia domestic, ex-warehouse, excl. VAT) increased by 36% from \$3,132 per tonne in May 2009 to \$4,254 per tonne in May 2010, according to Metal Expert. The increase in sales volumes was mainly derived from domestic market sales due to high demand.

Carbon and low alloyed flat product sales increased by \$94.8 million, or 59.7%, to \$253.6 million in the year ended December 31, 2010 from \$158.8 million in the year ended December 31, 2009 as a result of sales prices increase of \$58.6 million and sales volumes increase of \$36.2 million. The increase in sales prices was driven by an increase in domestic and international prices during the covered period, when price for hot-rolled coil (Russia exports, FOB Black Sea) increased by 67% from \$372 per tonne in May 2009 to \$623 per tonne in September 2010, according to Metal Expert. The increase in sales volumes was derived from both domestic and export sales due to growth in demand.

Forged alloys sales increased by \$22.2 million, or 1070.3%, to \$24.2 million in the year ended December 31, 2010 from \$2.1 million in the year ended December 31, 2009 as a result of sales volumes increase of \$3.3 million and sales prices increase of \$18.8 million. The increase in sales volumes was derived from both domestic and export sales due to the recovery of normal demand after the global economic slowdown. The increase of sales prices is explained by an increase in domestic and export prices for all forgings.

Stampings sales increased by \$52.1 million, or 38.0%, to \$188.9 million in the year ended December 31, 2010 from \$136.8 million in the year ended December 31, 2009 as a result of sales volumes increase of \$83.3 million partially offset by sales prices decrease of \$31.2 million. The decrease of sales prices is due to changes in the product mix, with increased sales volumes of cheaper forms of stampings. The increase in sales volumes is explained by the growth in

demand in major consuming industries due to the recovery after the global economic slowdown.

Wire sales increased by \$172.1 million, or 53.9%, to \$491.6 million in the year ended December 31, 2010 from \$319.5 million in the year ended December 31, 2009 as a result of sales prices increase of \$92.9 million and sales volume increase of \$79.2 million. The increase in sales prices was driven by the increase in the prices of wire-rod, which is the main input for wire production. The increase in sales volumes

Table of Contents

is explained by good demand from key consuming industries: construction, railways construction, automotive and machine-building industries and others.

Wire ropes sales increased by \$29.4 million, or 64.3%, to \$75.2 million in the year ended December 31, 2010 from \$45.8 million in the year ended December 31, 2009 as a result of sales prices increase of \$5.9 million and sales volume increase of \$23.5 million. The increase in sales prices was driven by the increase in the prices of wire, which is the main input for wire ropes production. The increase in sales volumes is explained by steady demand from key consuming industries: cranes production and lifting machine-building, mining, construction and others.

Sales of other products increased by \$408.7 million, or 216.3%, to \$597.6 million in the year ended December 31, 2010 from \$189.0 million in the year ended December 31, 2009 due to the recovery in all industries consuming such products after the global economic slowdown as well as due to the increase of sales volumes of finished products which we purchased from related metallurgical plants, as well as from third parties, and re-sold to third parties. The effect of these transactions on the sales of other products was \$181.4 million in the year ended December 31, 2010.

Excluding intersegment sales, export sales were 32.9% of steel segment sales in the year ended December 31, 2010, compared to 36.8% in the year ended December 31, 2009. The decrease in the proportion of our export sales was explained by growth of our production and very good growth demand on domestic market, due to competitive quality and pricing of our steel products, comparing to domestic rivals.

Ferrous alloys segment

Nickel sales to third parties increased by \$61.0 million, or 32.0%, to \$251.6 million in the year ended December 31, 2010 from \$190.6 million in the year ended December 31, 2009, as a result of sales prices increase of \$86.2 million partially offset by sales volumes decrease of \$25.2 million. The sales prices increase was due to the increase in nickel quotes at the London Metal Exchange (LME), which we use to determine our contract prices. Nickel price increased from \$9,696 per tonne in March 2009 to as high as \$22,461 per tonne in March 2010, according to LME. Our nickel sales volumes decreased by 1.8 thousand tonnes or 13.2% to 11.9 thousand tonnes in the year ended December 31, 2010 from 13.7 thousand tonnes in the year ended December 31, 2009 following to the weakening of demand from external stainless steel producers.

Nickel supplies to the steel segment increased by \$67.0 million, or 212.1%, to \$98.6 million in the year ended December 31, 2010 from \$31.6 million in the year ended December 31, 2009 as a result of sales prices increase of \$28.6 million and sales volumes increase of \$38.5 million. The increase of sales volumes is explained by the increase of stainless steel production in our steel segment companies in 2010 due to the revival of demand for steel products after the global economic slowdown.

Ferrosilicon sales to third parties increased by \$25.2 million, or 37.8%, to \$91.8 million in the year ended December 31, 2010 from \$66.6 million in the year ended December 31, 2009, mainly as a result of sales prices increase of \$30.0 million partially offset by sales volumes decrease of \$4.9 million. The increase in sales prices is explained by the increase in international ferrosilicon prices after the global economic slowdown. The price for Chinese ferrosilicon (75% Si FOB China) increased by 28% from \$1,100 per tonne in June 2009 to \$1,404 per tonne in June 2010, according to Metal Expert. The decrease in sales volumes was due to weak demand from export markets, while domestic sales volumes increased.

Ferrosilicon supplies to the steel segment increased by \$18.3 million, or 91.5%, to \$38.2 million in the year ended December 31, 2010 from \$20.0 million in the year ended December 31, 2009, as a result of sales prices increase of \$14.6 million and sales volumes increase of \$3.7 million. The increase of sales volumes is explained by the increase of stainless steel production in our steel segment companies in 2010 due to the revival of demand for steel products

after the global economic slowdown.

Chrome sales to third parties increased by \$0.7 million, or 0.8%, to \$93.6 million in the year ended December 31, 2010 from \$92.8 million in the year ended December 31, 2009, as a result of sales prices increase of \$35.3 million offset by the sales volumes decrease of \$34.6 million. The increase in sales prices is explained by the increase in international chrome prices during the covered period. The price for high carbon

Table of Contents

ferrochrome (6-8% C basis 60-65% Cr max. 1.5% Si major European destinations) increased by 204% from \$1,381 per tonne in May 2009 to \$2,815 per tonne in May 2010, according to Ryan's Notes. The decrease in sales volumes is explained by the decrease in production due to shortages in raw materials (chrome ore) caused by higher level of breakup of the ore we mined which led to supplies to the Tikhvin Ferroalloy Plant of chrome ore of a lesser quality than required. Since October 2010 we began mining an ore body which contains bigger share of lump material. The decrease in sales volumes is also explained by the increase in intersegment supplies.

Chrome supplies to the steel segment increased by \$22.9 million, or 178.1%, to \$35.8 million in the year ended December 31, 2010 from \$12.9 million in the year ended December 31, 2009 as a result of sales prices increase of \$11.9 million and sales volumes increase of \$11.0 million. The increase of sales volumes is explained by the increase of stainless steel production in our steel segment companies in 2010 due to the revival of demand for steel products after the global economic slowdown.

Excluding intersegment sales, export sales were 77.9% of ferroalloy segment sales in the year ended December 31, 2010, compared to 86.8% in the year ended December 31, 2009. The decrease in the proportion of our export sales was mostly due to the strong demand on the domestic market for ferrosilicon and more favorable prices of all ferroalloys products on the domestic market.

Power segment

Our power segment revenues increased by \$189.9 million, or 21.8%, to 1,062.7 million in the year ended December 31, 2010, from \$872.8 million in the year ended December 31, 2009. The increase is mainly explained by the increase of electricity sales to third parties by \$151.0 million, or 32.1%, to \$621.9 million in the year ended December 31, 2010, from \$470.9 million in the year ended December 31, 2009 as a result of sales prices increase of \$20.9 million and sales volumes increase of \$130.1 million. The increase of sales prices is explained by further liberalization of the Russian electricity market. The increase in electricity sales volumes is explained by the increased demand from industrial consumers following the recovery from the global economic slowdown.

Southern Kuzbass Power Plant contributed \$33.4 million to the power segment revenues through power generation capacity sales to third parties in the year ended December 31, 2010 compared to \$14.7 million in the year ended December 31, 2009.

Cost of goods sold and gross profit

The consolidated cost of goods sold was 63.1% of consolidated revenues in the year ended December 31, 2010, as compared to 68.8% of consolidated revenues in the year ended December 31, 2009, resulting in an increase in consolidated gross margin to 36.9% in the year ended December 31, 2010 from 31.2% for the year ended December 31, 2009. Cost of goods sold primarily consists of costs relating to raw materials (including products purchased for resale), direct payroll, depreciation and energy. The table below sets forth cost of

Table of Contents

goods sold and gross margin by segment for the years ended December 31, 2010 and 2009, including as a percentage of segment revenues.

Cost of Goods Sold and Gross Margin by Segment	Year Ended December 31, 2010		Year Ended December 31, 2009	
	Amount	% of Segment Revenues	Amount	% of Segment Revenues
(In thousands of U.S. dollars, except for percentages)				
Mining segment				
Cost of goods sold	1,739,348	45.1%	1,271,053	60.2%
Gross margin	2,116,815	54.9%	840,935	39.8%
Steel segment				
Cost of goods sold	4,727,243	81.0%	2,664,291	80.7%
Gross margin	1,106,434	19.0%	638,010	19.3%
Ferrous alloys segment				
Cost of goods sold	533,928	84.9%	392,428	91.1%
Gross margin	95,124	15.1%	38,381	8.9%
Power segment				
Cost of goods sold	763,403	71.8%	642,516	73.6%
Gross margin	299,277	28.2%	230,271	26.4%

Mining segment

Mining segment cost of goods sold increased by \$468.3 million, or 36.8%, to \$1,739.3 million in the year ended December 31, 2010, from \$1,271.1 million in the year ended December 31, 2009. The mining segment's gross margin percentage increased to 54.9% in the year ended December 31, 2010 from 39.8% in the year ended December 31, 2009.

The increase in the mining segment's gross margin percentage is explained by the increase of coking coal, coke and coking products, steam coal, anthracites and PCI and iron ore sales prices both on export and domestic markets following to recovery after the global economic slowdown.

At the same time coal production cash costs per tonne at Southern Kuzbass Coal Company increased by \$3.3 per tonne, or by 12.7%, from \$26.3 in the year ended December 31, 2009 to \$29.6 in the year ended December 31, 2010 mainly due to increase in repair expenses in connection with the planned repairs on production and transport equipment, as well as ruble appreciation. Coal production cash costs per tonne at Yakutugol increased by 3.3% due to the increase in fuel prices, electricity tariffs and cost of mining works. Coke production cash costs per tonne at Moscow Coke and Gas Plant increased by 56.1% and at Mechel-Coke by 63.2% due to a significant increase in coking coal concentrate purchase prices. Coal production cash costs per tonne at Bluestone decreased by 5.8% due to the decrease in costs of mining works and auxiliary materials expenditure rates. Production cash costs per tonne of iron ore increased by 39.1% due to the increases in costs of fuel, spare parts for transport equipment, railway tariff and electricity tariff.

Steel segment

Steel segment cost of goods sold increased by \$2,063.0 million, or 77.4%, to \$4,727.2 million in the year ended December 31, 2010, from \$2,664.3 million in the year ended December 31, 2009. Steel segment cost of goods sold was 81.0% of the segment's revenues in the year ended December 31, 2010, as compared to 80.7% in the year ended December 31, 2009, resulting in decrease of gross margin from 19.3% to 19.0%. The decrease in gross margin is explained by the increase in the share of products re-sold by our trading companies for the related metallurgical plants and other third party suppliers in the year ended December 31, 2010. Such transactions accounted for about 26.7% of the steel segment sales to third parties in the year ended December 31, 2010 and were effected with lower profit margins. See Item 7. Major Shareholders and Related Party Transactions Related Party Transactions Transactions with related metallurgical plants.

Ferrous alloys segment

Ferrous alloys segment cost of goods sold increased by \$141.5 million, or 36.1%, to \$533.9 million in the year ended December 31, 2010, from \$392.4 million in the year ended December 31, 2009. Ferrous alloy

Table of Contents

segment cost of goods sold was 84.9% of the segment's revenues in the year ended December 31, 2010, as compared to 91.1% in the year ended December 31, 2009, resulting in an increase of gross margin from 8.9% to 15.1%. The increase is attributable to the increase in sales prices that have risen more than the purchase prices of inputs such as coke and electricity tariffs.

Power segment

Power segment cost of goods sold increased by \$120.9 million, or 18.8%, to \$763.4 million in the year ended December 31, 2010, from \$642.5 million in the year ended December 31, 2009. Power segment gross margin percentage increased to 28.2% in the year ended December 31, 2010 from 26.4% in the year ended December 31, 2009. The increase is explained by the increase in electricity prices which exceeded the increase of steam coal prices (steam coal is the major raw material in electricity production).

Selling, distribution and operating expenses

Selling, distribution and operating expenses increased by \$516.7 million, or 33.4%, to \$2,064.5 million in the year ended December 31, 2010 from \$1,547.8 million in the year ended December 31, 2009 mainly due to an increase in selling and distribution expenses in mining, steel and power segments, taxes other than on income in mining segment, provision for doubtful accounts and general, administrative and other operating expenses of mining, steel and ferroalloy segments following an increase of sales revenue across all our segments and corresponding necessity of expansion of our activities to support this increase, as explained below. As a percentage of consolidated revenues, selling, distribution and operating expenses decreased to 21.2% in the year ended December 31, 2010, as compared to 26.9% in the year ended December 31, 2009, mainly due to the increase in the consolidated revenue in the year ended December 31, 2010 in comparison with the year ended December 31, 2009, including due to the effect of the sales of products of \$1,493.1 million produced by third parties and related parties as described above. Our selling, distribution and operating expenses consist primarily of selling and distribution expenses, taxes other than income tax, loss on write-off of property, plant and equipment, provision for doubtful accounts and general, administrative and other operating expenses. The table below sets forth these costs by segment for the year ended December 31, 2010 and 2009, including as a percentage of segment revenues.

Selling, Distribution and Operating Expenses by Segment	Year Ended December 31, 2010		Year Ended December 31, 2009	
	Amount	% of Segment Revenues	Amount	% of Segment Revenues
	(In thousands of U.S. dollars, except for percentages)			
Mining segment				
Selling and distribution expenses	657,716	17.1%	419,735	19.9%
Taxes other than income tax	55,166	1.4%	49,818	2.4%
Recovery of the allowance for doubtful accounts	(7,365)	(0.2)%	(560)	0.0%
Accretion expense	3,531	0.1%	3,492	0.2%
Loss on write-off property, plant and equipment	2,993	0.1%	3,496	0.2%
General, administrative and other operating expenses	218,884	5.7%	159,775	7.6%
Total	930,924	24.1%	635,756	30.1%

Steel segment

Accretion expense	126	0.0%	187	0.0%
General, administrative and other operating expenses	12,242	1.2%	10,889	1.2%
Total	252,553	23.8%	189,566	21.7%

Mining segment

Selling and distribution expenses consisted almost entirely of transportation expenses related to our selling activities, and increased by \$238.0 million, or 56.7%, to \$657.7 million in the year ended December 31, 2010 from \$419.7 million in the year ended December 31, 2009 due to the increase in coking coal, anthracites and PCI and coke sales volumes, as well as increase in railway tariffs as a result of annual increases of railway tariffs in Russia. As a percentage of mining segment revenues selling and distribution expenses decreased from 19.9% to 17.1% due to the increase in sales prices for all our products.

Taxes other than income tax include property and land taxes, as well as other taxes. Taxes other than income tax increased by \$5.3 million, or 10.7%, to \$55.2 million in the year ended December 31, 2010 from \$49.8 million in the year ended December 31, 2009. The increase is explained by the increase in property and land tax at Southern Kuzbass Coal Company by \$7.6 million, or 32.3%, to \$31.2 million in the year ended December 31, 2010 from \$23.6 million in the year ended December 31, 2009 due to the increase in tax rates following changes in the local legislation, as well as the increase in Southern Kuzbass Coal Company property, plant and equipment balances.

Recovery of allowance for doubtful accounts increased by \$6.8 million to \$7.4 million income in the year ended December 31, 2010 from \$0.6 million income in the year ended December 31, 2009, due to the collection of accounts receivable provided for in prior periods. In accordance with our accounting policy we apply specific rates to overdue accounts receivable of our companies depending on the history of cash collections and future expectations of

conditions that might impact the collectability. As at the December 31, 2010 the overdue balances decreased in comparison with December 31, 2009, and the allowance expenses decreased as well.

Loss on write off of property, plant and equipment decreased by \$0.5 million, or 14.4%, from \$3.5 million in the year ended December 31, 2009, to \$3.0 million in the year ended December 31, 2010 due to the decrease in the number of unused property, plant and equipment at our production facilities.

General, administrative and other expenses consist of payroll and payroll taxes, depreciation, rent and maintenance, legal and consulting expenses, office overheads and other expenses. These expenses increased by

156

Table of Contents

\$59.1 million, or 37.0%, to \$218.9 million in the year ended December 31, 2010, from \$159.8 million in the year ended December 31, 2009 as a result of the overall expansion of the group's activities, annual increases in salaries and ruble appreciation. Salaries and related social taxes increased by \$41.4 million, or 37.8%, to \$150.8 million in the year ended December 31, 2010 from \$109.4 million in the year ended December 31, 2009 mainly due to the increase in average duration of the working day at our enterprises in 2010 after the recovery from the global economic slowdown as well as an annual increase in salaries in our production subsidiaries. Legal and consulting fees and insurance services decreased by \$3.6 million, or 19.4%, to \$14.9 million in the year ended December 31, 2010 from \$18.5 million in the year ended December 31, 2009 due to the decrease in use of consulting services in 2010. Rent and maintenance, business travel expenses, bank charges and office expenses increased by \$7.0 million mainly due to the overall expansion of the group's activities and ruble appreciation. Social expenses decreased by \$3.2 million, or 53.5%, to \$2.8 million in the year ended December 31, 2010 from \$6.1 million in the year ended December 31, 2009 mainly due to cost cutting procedures implemented by our management. Other administrative and operating expenses decreased by \$10.4 million mainly due to the reduction of pension liabilities at Yakutugol following the transfer of part of the employees to our steel segment companies. For more details, please see the analysis in the steel segment discussion below.

Steel segment

Selling and distribution expenses for our steel segment consisted almost entirely of transportation expenses related to our selling activities. Such expenses increased by \$72.7 million, or 16.1%, to \$524.9 million in the year ended December 31, 2010 from \$452.2 million in the year ended December 31, 2009 due to increase of export sales volumes by 25%. As a percentage of steel segment revenues, selling and distribution expenses decreased to 9.0% in the year ended December 31, 2010 from 13.7% in the year ended December 31, 2009. The decrease was due to the increase in sales prices for all our products.

Taxes other than income tax include property and land taxes and other taxes. These taxes amounted to \$42.9 million in the year ended December 31, 2010, a decrease of \$1.3 million, or 2.9%, from \$44.1 million for the year ended December 31, 2009. As a percentage of segment revenues, these taxes decreased from 1.3% to 0.7%. Property and land taxes amounted to \$36.0 million in the year ended December 31, 2010, an increase of \$1.2 million, or 3.3%, from \$34.8 million in the year ended December 31, 2009, mainly due to ruble appreciation. This increase was offset by the decrease in non-reimbursable VAT expenses at our Romanian subsidiaries due to the decrease in their share of export sales in the year ended December 31, 2010 in comparison with the year ended December 31, 2009.

Recovery of allowance for doubtful accounts decreased by \$27.8 million, or 78.1%, to \$7.8 million income in the year ended December 31, 2010 from \$35.6 million income in the year ended December 31, 2009, due to the increase in allowance rates in the year ended December 31, 2010.

Loss on write off of property, plant and equipment increased by \$1.4 million, or 82.1%, from \$1.7 million in the year ended December 31, 2009, to \$3.0 million in the year ended December 31, 2010 due to the increase in the number of unused property, plant and equipment at our steel production subsidiaries.

General, administrative and other expenses increased by \$52.7 million, or 27.6%, to \$244.0 million in the year ended December 31, 2010 from \$191.3 million in the year ended December 31, 2009, and decreased as a percentage of segment revenues to 4.2% in the year ended December 31, 2010 from 5.8% in the year ended December 31, 2009. Payroll and related social taxes decreased by \$31.8 million, or 34.1%, to \$125.0 million in the year ended December 31, 2010 from \$93.2 million in the year ended December 31, 2009 due to the increase in average duration of the working day at our enterprises in 2010 after the recovery from the global economic slowdown as well as an annual increase in salaries in our production subsidiaries. Social expenses (including pension) increased by \$3.9 million, or 27.6%, to \$18.0 million in the year ended December 31, 2010 from \$14.1 million in the year ended

December 31, 2009 mainly due to ruble appreciation and the expansion of our social programs in 2010 following the recovery from the global economic slowdown. Rent and maintenance, business travel expenses, bank charges and office expenses increased by \$11.8 million, or 44.3%, to \$38.6 million in the year ended December 31, 2010 from \$26.8 million in the year ended December 31, 2009 mainly due to the overall expansion of the group's activities and ruble appreciation. Professional expenses, which include auditing, accounting, legal and engineering fees, and insurance services decreased by

Table of Contents

\$4.1 million, or 20.0%, to \$16.6 million in the year ended December 31, 2010 from \$20.7 million in the year ended December 31, 2009 primarily due to the decrease in use of consulting services in 2010. Other administrative and operating expenses increased by \$9.3 million, or 25.4%, to \$45.9 million in the year ended December 31, 2010 from \$36.6 million in the year ended December 31, 2009 mainly due to the increase in pension liabilities following the transfer of a certain number of employees from our mining segment production subsidiaries to our steel segment production subsidiaries.

Ferrous segment

Selling and distribution expenses, consisting predominately of transportation expenses related to our selling activities, increased by \$3.5 million, or 22.6%, to \$19.2 million in the year ended December 31, 2010 from \$15.7 million in the year ended December 31, 2009. As a percentage of the ferrous segment revenues, selling and distribution expenses decreased to 3.1% in the year ended December 31, 2010 from 3.6% in the year ended December 31, 2009, mainly due to an increase in the sales prices of all our products.

Taxes other than income tax amounted to \$9.6 million in the year ended December 31, 2010, an increase of \$1.4 million, or 16.7%, from \$8.2 million in the year ended December 31, 2009 due to the \$1.3 million accrual for tax risks at Voskhod relating to VAT which may not be reimbursed by the tax authorities. As a percentage of segment revenues, these taxes decreased from 1.9% in the year ended December 31, 2009 to 1.5% in the year ended December 31, 2010. Property and land taxes remained stable and amounted to \$4.4 million in the year ended December 31, 2010, an increase of \$0.5 million, or 11.7%, from \$3.9 million in the year ended December 31, 2009.

Recovery of allowance for doubtful accounts decreased by \$1.8 million to \$0.3 million income in the year ended December 31, 2010 from \$2.1 million income in the year ended December 31, 2009, due to increase in outstanding accounts receivable as of December 31, 2010, as well as the increase in allowance rates in year ended December 31, 2010.

Loss on write off of property, plant and equipment decreased by \$11.0 million to \$4.7 million in the year ended December 31, 2010 from \$15.8 million in the year ended December 31, 2009 due to the decrease in number of unused property, plant and equipment at our production subsidiaries.

General, administrative and other expenses increased by \$10.4 million, or 37.9%, to \$37.9 million in the year ended December 31, 2010 from \$27.5 million in the year ended December 31, 2009. Payroll and related social taxes increased by \$6.0 million or 49.8% to \$18.0 million in the year ended December 31, 2010 from \$12.0 million in the year ended December 31, 2009 due to the annual increase in salaries in our production subsidiaries. Social expenses (including pension) increased by \$0.8 million, or 31.9%, to \$3.1 million in the year ended December 31, 2010 from \$2.4 million in the year ended December 31, 2009 mainly due to ruble appreciation. Rent and maintenance, business travel expenses, bank charges and office expenses decreased insignificantly by \$0.1 million, or 1.2%, to \$5.4 million in the year ended December 31, 2010 from \$5.5 million in the year ended December 31, 2009 mainly due to the effect of overall cost-cutting measures implemented by the our management. Professional expenses, which include auditing, accounting, legal and engineering fees, and insurance services decreased by \$0.8 million, or 33.2%, to \$1.7 million in the year ended December 31, 2010 from \$2.5 million in the year ended December 31, 2009 primarily due to the decrease in use of consulting services in 2010. Other administrative and operating expenses increased by \$2.9 million, or 57.5%, to \$9.7 million in the year ended December 31, 2010 from \$5.1 million in the year ended December 31, 2008 mainly due to recognition of expenses related to the development of the Uvatskoye deposit.

Power segment

Selling and distribution expenses consisted almost entirely of electricity transmission costs incurred by our Kuzbass Power Sales Company for the usage of the power grid, through which electricity is distributed to the end consumers. These costs are incurred by all power distribution companies under agreements between such companies and the grid operator. These expenses increased by \$58.3 million, or 33.2%, to \$233.5 million in the year ended December 31, 2010 from \$175.3 million in the year ended December 31, 2009 due to increases in electricity transmission costs as well as the increase in electricity volumes transmitted through the power grid.

Table of Contents

Taxes other than income tax amounted to \$3.2 million in the year ended December 31, 2010, an increase of \$0.1 million, or 4.0%, from \$3.0 million in the year ended December 31, 2009, which was due to the increase in property and land tax charges related to the increase in property, plant and equipment balances.

Allowance for doubtful accounts increased by \$3.3 million to \$3.5 million in the year ended December 31, 2010 from \$0.2 million in the year ended December 31, 2009, mainly due to the increase in allowance rates in the year ended December 31, 2010.

General, administrative and other expenses increased by \$1.4 million, or 12.4%, to \$12.2 million in the year ended December 31, 2010 from \$10.9 million in the year ended December 31, 2009 due to ruble appreciation, as well as the effect of the consolidation of Toplofikatsia Rouse in December 2010.

Operating income

Operating income increased by \$1,286.6 million, or 523.7%, to \$1,532.2 million in the year ended December 31, 2010 from \$245.6 million in the year ended December 31, 2009. Operating income as a percentage of consolidated revenues increased to 15.7% in the year ended December 31, 2010 from 4.3% in the year ended December 31, 2009, mainly due to the increase in gross margin as explained above.

The table below sets out operating income by segment, including as a percentage of segment revenues.

Operating Income by Segment	Year Ended December 31, 2010		Year Ended December 31, 2009	
	Amount	% of Segment Revenues	Amount	% of Segment Revenues
	(In thousands of U.S. dollars, except for percentages)			
Mining segment	1,185,892	30.8%	205,169	9.7%
Steel segment	297,557	5.1%	(18,497)	(0.6)%
Ferroalloys segment	22,958	3.6%	(27,586)	(6.4)%
Power segment	46,724	4.4%	40,702	4.7%
Elimination of intersegment unrealized (profit) loss ⁽¹⁾	(20,924)		45,856	
Consolidated operating income	1,532,207		245,644	

- (1) Our management evaluates performance of our segments before the effect of elimination of unrealized profit in inventory balances of segments that was generated by the segments but not recognized as profit in our consolidated financial statements until the sale of such inventories to third parties. Therefore, we present our segments before such elimination, the effect of which is presented separately. The significant decrease in intersegment unrealized profit adjustment in the year ended December 31, 2010 in comparison with the year ended December 31, 2009 was due to the increase in gross margin of our mining and ferroalloy segments in 2010, followed by an increase in the sales prices.

Mining segment

Mining segment operating income increased by \$980.7 million, or 478.0%, to \$1,185.9 million in the year ended December 31, 2010 from \$205.2 million in the year ended December 31, 2009. The operating margin percentage increased to 30.8% in the year ended December 31, 2010 from 9.7% in the year ended December 31, 2009, mainly due to the increase in all our products sales prices following the recovery from the global economic slowdown.

Steel segment

Steel segment operating income increased by \$316.1 million, or 1,708.7%, to \$297.6 million in the year ended December 31, 2010 from \$18.5 million loss in the year ended December 31, 2009. The operating margin percentage increased to 5.1% in the year ended December 31, 2010 from negative 0.6% in the year ended December 31, 2009 due to the increase in all our products sales prices following the recovery from the global economic slowdown.

Table of Contents**Ferroalloys segment**

Ferroalloys segment operating income increased by \$50.5 million, or 183.2%, to \$23.0 million in the year ended December 31, 2010 from \$27.6 million loss in the year ended December 31, 2009. The operating margin percentage increased to 3.6% in the year ended December 31, 2010 from negative 6.4% in the year ended December 31, 2009, mainly due to the increase in all our products sales prices following the recovery from the global economic slowdown.

Power segment

Power segment operating income increased by \$6.0 million, or 14.8%, to \$46.7 million in the year ended December 31, 2010 from \$40.7 million in the year ended December 31, 2009. The operating margin percentage decreased to 4.4% in the year ended December 31, 2010 from 4.7% in the year ended December 31, 2009, due to the increase in selling and distribution expenses and allowance for doubtful accounts.

Other income and expense, net

Other income and expense, net consists of income (loss) of equity investees, interest income, interest expense, other income and foreign exchange gain. The table below sets forth these costs for the years ended December 31, 2010 and 2009, including as a percentage of revenues.

	Year Ended December 31, 2010		Year Ended December 31, 2009	
	Amount	% of Revenues	Amount	% of Revenues
Other Income and Expense, Net	(In thousands of U.S. dollars, except for percentages)			
Income (loss) from equity investees	1,184	0.0%	1,200	0.0%
Interest income	17,167	0.2%	21,445	0.4%
Interest expense	(558,397)	(5.7)%	(498,986)	(8.7)%
Other income, net	(8,987)	(0.1)%	500,257	8.7%
Foreign exchange gain (loss)	(14,544)	(0.1)%	(174,336)	(3.0)%
Total	(563,577)	(5.8)%	(150,420)	(2.6)%

Income from equity investees was stable in 2010 in comparison with the year 2009. It consists of our share of income of our equity investments such as Toplofikatsia Rousse (till December 2010) and various investments of Southern Kuzbass Coal Company.

Interest income decreased by \$4.3 million, or 19.9%, to \$17.2 million in the year ended December 31, 2010 from \$21.4 million in the year ended December 31, 2009. The decrease was mainly due to the fact that in 2009 interest income included interest income received from asset management agreements with Uglemetbank of \$9.5 million which was not repeated in 2010. The decrease was partially offset by the increase of interest income on bank deposits of our trading subsidiaries.

Interest expense increased by \$59.4 million, or 11.9%, to \$558.4 million in the year ended December 31, 2010 from \$499.0 million in the year ended December 31, 2009. The increase was associated with the overall increase of average loans balances in 2010, including interest for refinancing of loans related to the Yakutgol and Oriel acquisitions.

Other income decreased by \$509.2 million, or 101.8%, to \$9.0 million loss in the year ended December 31, 2010 from \$500.3 million income in the year ended December 31, 2009. The decrease is mainly explained by the effect from change of the fair value of contingent payment related to the Bluestone acquisition of \$494.2 million recognized in 2009. No such effect occurred in the year ended December 31, 2010 due to the fact that as of December 31, 2010 the fair value of the contingent payment related to the CVR was equal to \$nil and did not change since December 31, 2009.

Table of Contents

Foreign exchange loss decreased by \$159.8 million, or 91.7%, to \$14.5 million in the year ended December 31, 2010 from \$174.3 million in the year ended December 31, 2009. The foreign exchange loss in 2010 was primarily attributable to losses from revaluation of the U.S. dollar denominated syndicated loan arrangement for refinancing the debt incurred in connection with the acquisitions of Yakutugol and Oriel.

Income tax expense

Income tax expense increased by \$257.8 million, or 1,364.3%, to \$276.7 million in the year ended December 31, 2010 from \$18.9 million in the year ended December 31, 2009, due to an overall increase of operating income. Our effective tax rate increased from 19.8% to 28.6%. The increase in the effective tax rate was mainly due to the fact that in the year ended December 31, 2009, the gain resulting from the remeasurement of the contingent liability payment related to the Bluestone acquisition in the amount of \$494.2 million was recorded as a non-taxable gain and, therefore, it had no effect on the amount of income tax expenses in 2009. The increase in our effective tax rate was also due to the effect of the increase of the statutory tax rate in Kazakhstan which resulted in the recognition of additional deferred tax liability of \$59.6 million in the year ended December 31, 2010 in our Kazakh subsidiaries, thus our effective tax rate was higher than the Russian statutory income tax rate of 20%.

Net income attributable to non-controlling interests

Net income (loss) attributable to non-controlling interests increased by \$32.2 million, or 1,241.9%, to \$34.8 million in the year ended December 31, 2010 from \$2.6 million loss in the year ended December 31, 2009. The non-controlling interest in the income of our subsidiaries in 2010 consisted of the share of non-controlling shareholders in the net income of Kuzbass Power Sales Company of \$4.2 million, of Southern Kuzbass Coal Company and its subsidiaries of \$25.1 million, of Korshunov Mining Plant of \$17.5 million. These expenses were partially offset by the income from share in losses of Romanian subsidiaries of \$12.1 million.

Net income attributable to shareholders of Mechel

For the reasons set forth above, net income attributable to our shareholders increased by \$583.5 million, or 791.2%, to \$657.2 million in the year ended December 31, 2010 from \$73.7 million in the year ended December 31, 2009.

Net (loss) income attributable to common shareholders of Mechel

Net income attributable to our common shareholders increased by \$709.2 million, or 1,167.3%, to \$648.4 million in the year ended December 31, 2010 from \$60.8 million loss in the year ended December 31, 2009 due to the decrease in the payment of dividends on preferred shares by \$125.7 million, as well as due to the increase in net income attributable to the shareholders of Mechel.

Year ended December 31, 2009 compared to year ended December 31, 2008*Net revenues*

Consolidated net revenues decreased by \$4,196.6 million, or 42.2%, to \$5,754.1 million in the year ended December 31, 2009, from \$9,950.7 million in the year ended December 31, 2008.

Approximately \$157.4 million, or 2.7%, of our consolidated net revenues in the year ended December 31, 2009 were accounted for from sales of Bluestone products by both Bluestone companies which we acquired in May 2009 and our trading subsidiaries. However, this positive effect was offset by the decrease in sales prices and sales volumes across all our segments.

Table of Contents

The following table sets forth our net revenues by segment, including a breakdown by sales to third parties and other segments:

Net Revenues by Segment	Year Ended December 31,	
	2009	2008
	(In thousands of U.S. dollars, except percentages)	
Mining segment		
To third parties	1,713,245	3,664,468
To ferroalloys segment	63,197	102,992
To power segment	27,510	41,079
To steel segment	308,039	757,816
Total	2,111,990	4,566,354
Steel segment		
To third parties	3,143,282	5,164,077
To ferroalloys segment	2,729	5,031
To power segment	122,231	161,430
To mining segment	34,060	29,713
Total	3,302,302	5,360,251
Ferroalloys segment		
To third parties	363,652	434,017
To power segment	450	
To steel segment	66,707	150,614
Total	430,809	584,631
Power segment		
To third parties	533,968	688,143
To steel segment	233,327	223,075
To ferroalloys segment	41,861	29,468
To mining segment	63,628	87,424
Total	872,784	1,028,110
Eliminations	963,738	1,588,641
Consolidated revenues	5,754,146	9,950,705
% from mining segment	29.8%	36.8%
% from steel segment	54.6%	51.9%
% from ferroalloys segment	6.3%	4.4%
% from power segment	9.3%	6.9%

Mining segment

Our total mining segment sales decreased by \$2,454.4 million, or 53.7%, to \$2,112.0 million in the year ended December 31, 2009 from \$4,566.4 million in the year ended December 31, 2008.

Coking coal concentrate sales to third parties decreased by \$1,322.6 million, or 71.1%, to \$538.3 million in the year ended December 31, 2009 from \$1,860.9 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$540.9 million and a decrease in sales volumes of \$781.7 million. The sales prices decrease is explained by the sharp decrease in international coking coal prices through the second half of 2008 and 2009, when the coking coal spot price (premium hard coking coal; FOB Australia) decreased by 70% from \$405 per tonne in August 2008 to \$120 per tonne in May 2009, according to Metal Bulletin. The

Table of Contents

volumes of coking coal concentrate sold to the third parties decreased by 3,512 thousand tonnes, or 42.0%, to 4,848 thousand tonnes in the year ended December 31, 2009 from 8,360 thousand tonnes in the year ended December 31, 2008. The decrease in sales volumes during the period was due to decreased demand from both domestic and foreign customers. Demand for coking coal from steel producers fell sharply due to depressed end-user steel demand and unfavorable economic conditions globally. The volumes of coking coal sold to third parties decreased both at Yakutugol and Southern Kuzbass Coal Company. Yakutugol's coking coal sales volumes decreased by 3,298 thousand tonnes, or 68.7%, from 4,802 thousand tonnes to 1,504 thousand tonnes. Southern Kuzbass Coal Company's coking coal sales volumes decreased by 1,432 thousand tonnes, or 37.8%, from 3,790 thousand tonnes to 2,358 thousand tonnes. In May 2009 we acquired the Bluestone companies. Bluestone's coking coal sales to third parties in May-December 2009 contributed 986 thousand tonnes to our coking coal sales volumes in the year ended December 31, 2009.

Coke sales decreased by \$238.8 million, or 63.3%, to \$138.7 million in the year ended December 31, 2009 from \$377.5 million in the year ended December 31, 2008 as a result of a sales prices decrease of \$164.7 million and a sales volume decrease of \$74.1 million. The decrease in sales prices was driven by the decrease in coking coal prices, which is the key raw material in the production of coke. The decrease in sales volumes was in line with weakened demand due to the global financial crisis.

Coking products sales decreased by \$12.7 million, or 36.0%, to \$22.6 million in the year ended December 31, 2009 from \$35.3 million in the year ended December 31, 2008 as a result of a sales prices decrease of \$10.7 million and a sales volumes decrease of \$2.0 million. The reasons for the decrease in sales prices and volumes of coking products are the same as those for coke.

Coke supplied to the steel segment decreased by \$311.1 million, or 52.2%, to \$285.2 million in the year ended December 31, 2009 from \$596.3 million in the year ended December 31, 2008, where \$320.7 million of the decrease was due to a decrease of sales prices which was offset by the increase of sales volumes of \$9.6 million. The sales volumes were stable in 2009 in comparison with 2008.

Steam coal and steam coal concentrate sales to third parties decreased by \$262.5 million, or 28.4%, to \$662.5 million in the year ended December 31, 2009 from \$925.0 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$297.6 million which was partially offset by an increase in sales volumes of \$35.1 million. The sales prices decrease was due to a decrease in international steam coal prices through the second half of 2008 and 2009, when the steam coal spot price (6,000 kCal/kg basis coal, CIF NW Europe) decreased by 70.3% from \$209 per tonne in July 2008 to \$62 per tonne in March 2009, according to Platts. The increase in sales volumes was mainly due to an expansion of steam coal export sales to China, where demand was not as subdued as in other regions. Steam coal sales volumes to China were 1,333 thousand tonnes, in the year ended December 31, 2009, as compared to nil in the year ended December 31, 2008. Bluestone's steam coal sales in May-December 2009 contributed 238 thousand tonnes to the total mining segment sales volumes.

Steam coal supplied to the power and ferroalloy segments decreased by \$24.5 million, or 49.1%, to \$25.4 million in the year ended December 31, 2009 from \$49.9 million in the year ended December 31, 2008, as a result of a decrease in sales prices of \$26.1 million, partially offset by an increase in sales volumes of \$1.6 million, or 32 thousand tonnes.

Sales of iron ore to third parties decreased by \$106.4 million, or 31.4%, to \$233.0 million from \$339.4 million as a result of a decrease in sales prices of \$240.8 million which was partially offset by an increase in sales volumes of \$134.4 million. The decrease in the sales prices was due to decreases in international iron ore prices through the second half of 2008 and 2009, when the iron ore spot price (Indian iron ore 63% Fe dry, CFR North China port) decreased by 67% from \$189 per tonne in July 2008 to \$63 per tonne in April 2009, according to AME. The increase in sales volumes was due to both export and domestic markets and corresponded with the increase in demand from

Chinese and Russian steel producers.

Supplies of iron ore by our mining segment to our steel segment decreased by \$138.7 million, or 93.1%, to \$10.2 million in the year ended December 31, 2009 from \$148.9 million in the year ended December 31, 2008 as a result of a decrease in sales volume of \$128.5 million and a decrease in sales prices of

Table of Contents

\$10.2 million. Intersegment sales volumes decreased because we purchased more iron ore from third parties which are more favorably located in relation to Chelyabinsk Metallurgical Plant as compared to Korshunov Mining Plant.

Excluding intersegment sales, export sales comprised 63.6% of the mining segment sales in the year ended December 31, 2009, compared to 57.9% in the year ended December 31, 2008. The increase in the proportion of our export sales was due to the higher export volumes of steam coal and iron ore due to higher sales prices on the export markets. The average steam coal export price on FCA basis in the year ended December 31, 2009 was \$70.0 per tonne in comparison with \$34.7 per tonne for Russian sales on FCA basis. The average iron ore export price on FCA basis in the year ended December 31, 2009 was \$46.3 per tonne in comparison with \$43.9 per tonne for domestic sales on FCA basis.

Steel segment

Our steel segment revenues decreased by \$2,057.9 million, or 38.4%, to \$3,302.3 million in the year ended December 31, 2009 from \$5,360.3 million in the year ended December 31, 2008. Steel segment sales in 2009 were generally influenced by depressed economic and financial conditions both in Russia and globally. Consumption of steel products in Russia declined by 29.0% in the year ended December 31, 2009 to 26.5 million tonnes from 37.3 million tonnes in the year ended December 31, 2008 according to Metal Expert. Domestic steel product shipments from Russian producers declined in line with Russian consumption. However, production of steel products (including semi-finished) in Russia in the same period declined by 11.5% to 54.0 million tonnes from 61.0 million tonnes, since most Russian steel producers intensified their export sales efforts. Export shipments of steel products (including semi-finished) increased by 8.7% in the year ended December 31, 2009 to 30.0 million tonnes from 27.6 million tonnes in the year ended December 31, 2008, while export sales of finished steel products increased by 27.8%.

Semi-finished products sales increased by \$21.1 million, or 4.4%, to \$496.8 million in the year ended December 31, 2009 from \$475.7 million in the year ended December 31, 2008 as a result of an increase in sales volumes of \$420.7 million which was partially offset by a decrease in sales prices of \$399.6 million. The sales price decreased due to a decline in international prices for billets and slabs in the second half of the 2008-2009 period, since billet prices (square billet, FOB Black Sea) decreased by 75% from \$1,185 per tonne in June 2008 to \$298 per tonne in March 2009, according to Metal Expert. The increase in sales volumes was based on relatively stable demand for Russian semi-finished products in the export markets due to their competitive pricing.

Stainless long products sales decreased by \$9.6 million, or 18.1%, to \$43.4 million in the year ended December 31, 2009 from \$53.0 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$40.1 million, which was partially offset by an increase in sales volumes of \$30.5 million. The decrease in sales prices was driven by the decrease in the prices of steelmaking raw materials (iron ore, coking coal etc.) and alloys (nickel, chrome etc.). The increase in sales volumes was due to an increase in demand in the Russian market in the second half of 2009.

Alloyed long products sales decreased by \$89.4 million, or 56.6%, to \$68.6 million in the year ended December 31, 2009 from \$158.0 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$104.8 million partially offset by an increase in sales volumes of \$15.4 million. The decrease in sales prices was generally due to the same reasons as for low alloyed engineering steel. The increase in sales volumes was due to the strengthening of demand in the domestic market in the second half of 2009.

Rebar sales decreased by \$755.3 million, or 46.3%, to \$877.5 million in the year ended December 31, 2009 from \$1,632.8 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$802.4 million partially offset by an increase in sales volumes of \$47.1 million. The decrease in sales prices was driven by a sharp

decrease in domestic and international prices, when rebar prices (Russia domestic, ex-warehouse, excluding VAT) decreased by 70% from \$1,326 per tonne in August 2008 to \$401 per tonne in April 2009, according to Metal Expert. The increase in sales volumes was due to higher export sales. Demand in the Russian market was weak due to the depressed economic situation of the construction industry during

Table of Contents

2009, resulting in lower Russian sales. We redirected rebar shipments to export markets where demand strengthened in the second half of 2009.

Wire-rod sales decreased by \$36.8 million, or 15.3%, to \$203.5 million in the year ended December 31, 2009 from \$240.3 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$153.1 million, which was partially offset by an increase in sales volumes of \$116.2 million. The decrease in sales prices was driven by a decrease in domestic and international prices, when wire-rod price (Russia domestic, ex-warehouse, excluding VAT) decreased by 66% from \$1,219 per tonne in August 2008 to \$419 per tonne in April 2009, according to Metal Expert. The increase in sales volumes was due to higher exports.

Low alloyed engineering steel sales decreased by \$327.8 million, or 54.8%, to \$270.5 million in the year ended December 31, 2009 from \$598.3 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$222.1 million and a decrease in sales volumes of \$105.7 million. The decrease in sales prices was driven by a decrease in the prices of steelmaking raw materials (iron ore, coking coal etc.). The decrease in sales volumes was due to weak demand in key consuming industries, such as the automotive and machine building industries in Russia and abroad.

Stainless flat products sales decreased by \$81.4 million, or 44.1%, to \$103.1 million in the year ended December 31, 2009 from \$184.6 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$54.7 million and a decrease in sales volumes of \$26.7 million. The decrease in sales prices was driven by a decrease in Russian prices during the covered period, when prices for stainless flat steel (cold-rolled, 08X18H10T steel grade, 2-3 mm, Russia domestic, ex-warehouse, excluding VAT) decreased by 48% from \$6,144 per tonne in May 2008 to \$3,169 per tonne in March 2009, according to Metal Expert. The decrease in sales volumes was mainly due to weak demand in Russian markets.

Carbon and low alloyed flat product sales increased by \$132.2 million, or 45.4%, to \$158.8 million in the year ended December 31, 2009 from \$291.0 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$112.1 million and a decrease in sales volumes of \$20.0 million. The decrease in sales prices was driven by a decrease in domestic and international prices during the covered period, when the price for hot-rolled coil (Russia exports, FOB Black Sea) decreased by 71% from \$1,215 per tonne in August 2008 to \$355 per tonne in May 2009, according to Metal Expert. The decrease in sales volumes was due to a lack of demand in both Russian and export markets.

Carbon and low-alloyed forgings sales decreased by \$48.4 million, or 45.1%, to \$58.8 million in the year ended December 31, 2009 from \$107.2 million in the year ended December 31, 2008 as a result of a decrease in sales volumes of \$48.4 million. The decrease in sales volumes was due to poor demand in Russian and export markets.

Stampings sales decreased by \$99.3 million, or 42.1%, to \$136.8 million in the year ended December 31, 2009 from \$236.1 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$28.1 million and a decrease in sales volumes of \$71.1 million. The decrease in sales prices and sales volumes was due to a sharp decrease of demand from the key consuming industries in both export and Russian markets due to the global economic slowdown.

Wire sales decreased by \$320.7 million, or 50.1%, to \$319.5 million in the year ended December 31, 2009 from \$640.2 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$234.5 million and a decrease in sales volumes of \$86.2 million. The decrease in sales prices was driven by a decrease in the prices of wire-rod, which is the main material used in wire production. The decrease in sales volumes was due to the lack of demand from the key consuming industries (construction, railways construction, automotive and machine-building industries).

Wire ropes sales decreased by \$38.6 million, or 45.7%, to \$45.8 million in the year ended December 31, 2009 from \$84.4 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$20.6 million and a decrease in sales volumes of \$18.0 million. The decrease in sales prices was driven by a decrease in the prices of wire, which is the main material used in wire ropes production. The decrease in the sales volumes was due to the lack of demand from the key consuming industries (crane production and lifting machine-building, mining and construction industries).

Table of Contents

Excluding intersegment sales, export sales comprised 36.8% of steel segment sales in the year ended December 31, 2009, compared to 22.4% in the year ended December 31, 2008. The increase in the proportion of our export sales was due to weak Russian demand and relatively stable demand from export markets, which we believe we were able to capture due to the competitive quality and pricing of our steel products as compared to our international rivals.

Ferrous alloys segment

Nickel sales to third parties decreased by \$90.7 million, or 32.2%, to \$190.6 million in the year ended December 31, 2009 from \$281.3 million in the year ended December 31, 2008, as a result of a decrease in sales prices of \$106.2 million, which was partially offset by an increase in sales volumes of \$15.5 million. The decrease in sales prices was due to a decrease in nickel quotes at the London Metal Exchange (LME), which we use to determine our contract prices. Nickel price at the LME declined from a high price of \$33,300 per tonne in March 2008 to a low of \$9,405 per tonne in March 2009, according to Metal Bulletin. Our nickel sales volumes increased by 0.7 thousand tonnes to 13.7 thousand tonnes in the year ended December 31, 2009 from 13.0 thousand tonnes in the year ended December 31, 2008, due to growth in demand from stainless steel producers.

Nickel supplies to our steel segment decreased by \$57.6 million, or 64.6%, to \$31.6 million in the year ended December 31, 2009 from \$89.2 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$17.9 million and a decrease in sales volumes of \$39.7 million. The decrease in sales volumes was due to a decrease in steel production volumes at Chelyabinsk Metallurgical Plant and Izhstal as a result of the global economic slowdown.

Ferrosilicon sales to third parties decreased by \$12.7 million, or 16.0%, to \$66.6 million in the year ended December 31, 2009 from \$79.3 million in the year ended December 31, 2008, mainly as a result of a decrease in sales prices of \$29.1 million, which was partially offset by an increase in sales volumes of \$16.4 million. The decrease in sales prices was due to a decrease in international ferrosilicon prices during the second half of 2008 and 2009. The price for Chinese ferrosilicon (75% Si, FOB Hong Kong) declined by 56% from \$2,235 per tonne in June 2009 to a low of \$990 per tonne in January 2009, according to Metal Bulletin. The increase in sales volumes was due to an increase in export sales volumes, while Russian sales volumes declined.

Ferrosilicon supplies to our steel segment decreased by \$19.5 million, or 49.4%, to \$20.0 million in the year ended December 31, 2009 from \$39.5 million in the year ended December 31, 2008, as a result of a decrease in sales prices of \$10.0 million and a decrease in sales volumes of \$9.5 million. The decrease in sales volumes was due to a decrease in steel production volumes at Chelyabinsk Metallurgical Plant and Izhstal as a result of the global economic slowdown.

Chrome sales to third parties increased by \$24.6 million, or 36.2%, to \$92.8 million in the year ended December 31, 2009 from \$68.2 million in the year ended December 31, 2008, as a result of an increase in sales volumes of \$223.8 million, which was partially offset by a decrease in sales prices of \$199.2 million. The increase in sales volumes was due to the consolidation of Tikhvin Ferroalloys Plant in our consolidated financial statements for full year 2009 as compared to nine months in 2008. The decrease in sales prices was due to a decrease in international chrome prices during the second half of the 2008 and 2009. The price for high-carbon ferrochrome (6-8% C, 60% Cr max., 1.5% Si, major European destinations) declined by 77% from \$6,283 per tonne in May 2008 to a low of \$1,433 per tonne in April 2009, according to Metal Bulletin.

Chrome supplies to our steel segment decreased by \$9.0 million, or 41.1%, to \$12.9 million in the year ended December 31, 2009 from \$21.9 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$11.3 million, attributable to a decrease in international and Russian sale prices, which was partially offset by an increase in sales volumes of \$2.3 million. The increase in sales volumes was due to the consolidation of Tikhvin

Ferroalloys Plant in our consolidated financial statements for full year 2009 as compared to nine months in 2008.

Excluding intersegment sales, export sales increased and comprised 86.8% of ferroalloy segment sales in the year ended December 31, 2009, compared to 76.8% in the year ended December 31, 2008. The increase in

Table of Contents

the proportion of our export sales was due to the higher export volumes of chrome and ferrosilicon due to higher demand from foreign steel producers in comparison with Russian steel producers.

Power segment

Our power segment revenues decreased by \$155.3 million, or 15.1%, to \$872.8 million in the year ended December 31, 2009, from \$1,028.1 million in the year ended December 31, 2008. The decrease was mainly due to the decrease in electricity sales to third parties by \$165.0 million, or 25.9%, to \$470.9 million in the year ended December 31, 2009, from \$635.9 million in the year ended December 31, 2008 as a result of a decrease in sales prices of \$71.7 million and a decrease in sales volumes of \$93.3 million. The decrease in sales prices was due to depreciation of the ruble against the U.S. dollar. The decrease in electricity sales volumes was due to a decline in demand from industrial consumers.

Southern Kuzbass Power Plant contributed \$14.7 million to the power segment revenues through sales of power generation capacity to third parties in the year ended December 31, 2009.

Cost of goods sold and gross profit

The consolidated cost of goods sold was 68.8% of consolidated revenues in the year ended December 31, 2009, as compared to 52.9% of consolidated revenues in the year ended December 31, 2008, resulting in a decrease in consolidated gross margin to 31.2% in the year ended December 31, 2009 from 47.1% for the year ended December 31, 2008. Cost of goods sold primarily consists of costs relating to raw materials (including products purchased for resale), direct payroll, depreciation and energy. The table below sets forth cost of goods sold and gross margin by segment for the years ended December 31, 2009 and 2008, including as a percentage of segment revenues.

Cost of Goods Sold and Gross Margin by Segment	Year Ended December 31, 2009		Year Ended December 31, 2008	
	Amount	% of Segment Revenues	Amount	% of Segment Revenues
(In thousands of U.S. dollars, except for percentages)				
Mining segment				
Cost of goods sold	1,271,055	60.2%	1,698,828	30.5%
Gross margin	840,935	39.8%	2,867,526	69.5%
Steel segment				
Cost of goods sold	2,664,292	80.7%	3,868,358	73.1%
Gross margin	638,010	19.3%	1,491,894	26.9%
Ferroalloys segment				
Cost of goods sold	392,428	91.1%	571,221	97.7%
Gross margin	38,381	8.9%	13,410	2.3%
Power segment				
Cost of goods sold	642,512	73.6%	714,094	69.5%
Gross margin	230,271	26.4%	314,016	30.5%

Mining segment

Mining segment cost of goods sold decreased by \$427.8 million, or 25.2%, to \$1,271.1 million in the year ended December 31, 2009, from \$1,698.8 million in the year ended December 31, 2008. The mining segment's gross margin percentage decreased from 62.8% in the year ended December 31, 2008, to 39.8% in the year ended December 31, 2009.

The decrease in the mining segment's gross margin percentage was due to a decrease in coking coal, steam coal and iron ore sales prices both in export and domestic markets as a result of the global financial crisis. At the same time coal production cash costs per tonne at Southern Kuzbass Coal Company decreased by 11.4% due to ruble depreciation. Coal production cash costs per tonne at Yakutugol increased by 6.1% due to decrease of production volumes following the decrease of intersegment and external demand due to the

Table of Contents

financial crisis which eliminated the benefit of economies of scale in the year ended December 31, 2008. Coal cash cost per tonne at Bluestone for the period from May 2009 to December 31, 2009 was \$93.7 per tonne. The production cash costs per tonne for coke at Moscow Coke and Gas Plant and Mechel-Coke decreased by 46.6% and 90.8%, respectively, following the decrease of coking coal concentrate prices. Production cash costs per tonne for iron ore concentrate decreased by 14.1%, mostly due to the depreciation of the ruble, partially offset by higher per unit costs due to lower production volumes by 10.5%.

Steel segment

Steel segment cost of goods sold decreased by \$1,204.1 million, or 31.1%, to \$2,664.3 million in the year ended December 31, 2009, from \$3,868.4 million in the year ended December 31, 2008. Steel segment cost of goods sold was 80.7% of the segment's revenues in the year ended December 31, 2009, as compared to 72.2% in the year ended December 31, 2008, resulting in a decrease in gross margin from 27.8% to 19.3%. The decrease in gross margin was due to a decrease in sales prices which exceeded the decrease in purchase prices of major raw materials (coking coal, iron ore and ferroalloys).

Ferroalloys segment

Ferroalloys segment cost of goods sold decreased by \$178.8 million, or 31.3%, to \$392.4 million in the year ended December 31, 2009, from \$571.2 million in the year ended December 31, 2008. Ferroalloy segment cost of goods sold was 91.1% of the segment's revenues in the year ended December 31, 2009, as compared to 97.7% in the year ended December 31, 2008, resulting in an increase of gross margin from 2.3% to 8.9%. The increase in gross margin was due to the absence of write down of inventory to market price in the year ended December 31, 2009 as compared to the write down in the amount of \$94.7 million in the year ended December 31, 2008.

Power segment

Power segment cost of goods sold decreased by \$71.6 million, or 10.0%, to \$642.5 million in the year ended December 31, 2009, from \$714.1 million in the year ended December 31, 2008. Power segment gross margin percentage decreased from 30.5% in the year ended December 31, 2008, to 26.4% in the year ended December 31, 2009. The decrease in gross margin was due to a decrease in electricity prices which exceeded the decrease in steam coal prices (steam coal is the major raw material in electricity production).

Selling, distribution and operating expenses

Selling, distribution and operating expenses decreased by \$586.5 million, or 27.5%, to \$1,547.8 million in the year ended December 31, 2009 from \$2,134.3 million in the year ended December 31, 2008 mainly due to a decrease in selling and distribution expenses in the mining and power segments, taxes other than income tax in the mining segment, and provision for doubtful accounts and general, administrative and other operating expenses in the mining, steel and power segments, as explained below. As a percentage of consolidated revenues, selling, distribution and operating expenses increased to 26.9% in the year ended December 31, 2009, as compared to 21.4% in the year ended December 31, 2008. Our selling, distribution and operating expenses consist primarily of selling and distribution expenses, taxes other than income tax, loss on write-off of property, plant and equipment, provision for doubtful accounts and general, administrative and other

Table of Contents

operating expenses. The table below sets forth these costs by segment for the year ended December 31, 2009 and 2008, including as a percentage of segment revenues.

Selling, Distribution and Operating Expenses by Segment	Year Ended December 31, 2009		Year Ended December 31, 2008	
	Amount	% of Segment Revenues	Amount	% of Segment Revenues
(In thousands of U.S. dollars, except for percentages)				
Mining segment				
Selling and distribution expenses	419,735	19.9%	691,551	15.1%
Taxes other than income tax	49,818	2.4%	62,978	1.4%
Allowance for doubtful accounts	(560)	0.0%	15,640	0.3%

Total	189,566	21.7%	284,610	27.7%
-------	---------	-------	---------	-------

Table of Contents**Mining segment**

Selling and distribution expenses consisted almost entirely of transportation expenses related to our selling activities, and decreased by \$271.8 million, or 39.3%, from \$691.6 million in the year ended December 31, 2008 to \$419.7 million in the year ended December 31, 2009. The decrease was due to a decrease in coking coal sales volumes, as well as a decrease in railway tariffs as a result of the depreciation of the ruble. As a percentage of mining segment revenues, selling and distribution expenses increased from 15.1% to 19.9% due to a decrease in sales prices of all our products.

Taxes other than income tax include property and land taxes, as well as other taxes. Taxes other than income tax decreased by \$13.2 million, or 20.9%, from \$63.0 million in the year ended December 31, 2008, to \$49.8 million in the year ended December 31, 2009. The decrease was mainly due to tax items in 2008 which did not recur in 2009. In the year ended December 31, 2008 tax penalties and fines imposed by the FAS under the antimonopoly legislation on Mechel Trading House, Southern Kuzbass Coal Company and Yakutugol were recognized in the amount of \$32.1 million. Also in the year ended December 31, 2008 income from the release of tax risks previously accrued with respect to Yakutugol and Mechel Trade House in the amount of \$7.3 million was recognized. In addition, in the year ended December 31, 2009 additional tax risks in the total amount of \$1.3 million were accrued at Korshunov Mining Plant, \$2.3 million of prior period taxes were accrued at Southern Kuzbass Coal Company and \$3.5 million taxes were incurred at Bluestone.

Allowance for doubtful accounts decreased by \$16.2 million from \$15.6 million loss in the year ended December 31, 2008 to \$0.6 million income in the year ended December 31, 2009, due to lower exposure to losses on accounts receivable. In accordance with our accounting policy we apply specific rates to overdue accounts receivable of our companies depending on the history of cash collections and future expectations of conditions that might impact the collectability of accounts of each of our companies. As of December 31, 2009 the overdue balances decreased in comparison to December 31, 2008, and therefore the allowance for doubtful accounts also decreased.

Loss on write-off of property, plant and equipment increased by \$2.7 million, or 337.5%, from \$0.8 million in the year ended December 31, 2008, to \$3.5 million in the year ended December 31, 2009. The entirety of this amount in the year ended December 31, 2009 relates to the write-off of obsolete property, plant and equipment that is not intended for further use in production process at Yakutugol and Southern Kuzbass Coal Company.

General, administrative and other expenses consist of payroll and payroll taxes, depreciation, rent and maintenance, legal and consulting expenses, office overheads and other expenses. These expenses decreased by \$106.9 million, or 40.1%, to \$159.8 million in the year ended December 31, 2009, from \$266.7 million in the year ended December 31, 2008 as a result of the management steps aimed at overall expenses reduction and the depreciation of the ruble. Salaries and related social taxes decreased by \$33.0 million, or 23.1%, to \$109.4 million in the year ended December 31, 2009 from \$142.4 million in the year ended December 31, 2008 mainly due to a reduction in working hours at our companies in the first quarter of 2009. Legal and consulting fees and insurance services increased by \$1.0 million, or 5.5%, to \$18.5 million in the year ended December 31, 2009 from \$17.5 million in the year ended December 31, 2008 due to the consolidation of Bluestone since May 2009. Rent and maintenance, business travel expenses, bank charges and office expenses decreased by \$17.3 million, or 41.4%, to \$24.5 million in the year ended December 31, 2009 from \$41.9 million in the year ended December 31, 2008 as a result of cost cutting measures. Social expenses decreased by \$17.7 million, or 74.5%, to \$6.1 million in the year ended December 31, 2009 from \$23.8 million in the year ended December 31, 2008 mainly due to a reduction in our social programs in the first half of 2009 necessitated by the global financial crisis. Other administrative and operating expenses decreased by \$39.2 million mainly due to the recognition of a \$38.2 million reduction in the pension obligations at Yakutugol based on an expert consultant's review of our pension program for Yakutugol and planned changes aimed at reducing the number of employees to whom Yakutugol will provide financial support for re-settlement upon retirement from

Yakutia to central parts of Russia. This income was partially offset by the losses from provision for non-recoverable advances paid to various suppliers at Korshunov Mining Plant and Mechel Trading, with the total effect of \$3.8 million.

Table of Contents**Steel segment**

Selling and distribution expenses for our steel segment consisted almost entirely of transportation expenses related to our selling activities. Such expenses increased by \$59.0 million, or 15.0%, to \$452.2 million in the year ended December 31, 2009 from \$393.2 million in the year ended December 31, 2008 due to an increase in export sales volumes of 42%. As a percentage of steel segment revenues, selling and distribution expenses increased from 7.3% in the year ended December 31, 2008 to 13.7% in the year ended December 31, 2009. The increase was due to the decreases in sales prices for all our products.

Taxes other than income tax include property and land taxes and other taxes. These taxes amounted to \$44.1 million in the year ended December 31, 2009, a decrease of \$2.8 million, or 5.9%, from \$46.9 million in the year ended December 31, 2008. As a percentage of segment revenues, these taxes increased from 0.9% to 1.3%. Property and land taxes amounted to \$34.8 million in the year ended December 31, 2009, a decrease of \$10.4 million, or 22.9%, from \$45.2 million in the year ended December 31, 2008, mainly due to the depreciation of the ruble.

Allowance for doubtful accounts decreased by \$111.5 million, or 146.8%, to \$35.6 million income in the year ended December 31, 2009 from \$76.0 million loss in the year ended December 31, 2008, due to the decrease in outstanding accounts receivable provided as of December 31, 2009, as well as the collection of certain accounts receivable provided for as of December 31, 2008.

Loss on write-off of property, plant and equipment decreased by \$1.8 million, or 51.4%, from \$3.5 million in the year ended December 31, 2008, to \$1.7 million in the year ended December 31, 2009. The amount in the year ended December 31, 2009 relates to the write-off of obsolete property, plant and equipment that are not intended for further use in the production process at Chelyabinsk Metallurgical Plant and Beloretsk Metallurgical Plant.

General, administrative and other expenses decreased by \$31.9 million, or 14.3%, to \$191.3 million from \$223.2 million in the year ended December 31, 2008, and increased as a percentage of segment revenues from 4.2% in the year ended December 31, 2008, to 5.8% in the year ended December 31, 2009. Payroll and related social taxes decreased by \$7.0 million, or 7.0%, to \$93.2 million in the year ended December 31, 2009 from \$100.1 million in the year ended December 31, 2008 due to reduced working hours at our companies in the first quarter of 2009. Social expenses (including pension obligations) decreased by \$6.6 million, or 31.9%, to \$14.1 million in the year ended December 31, 2009 from \$20.7 million in the year ended December 31, 2008, mainly due to the depreciation of the ruble and a reduction in our social programs in 2009 necessitated by the global financial crisis. Rent and maintenance, business travel expenses, bank charges and office expenses decreased by \$2.2 million, or 7.7%, to \$26.8 million in the year ended December 31, 2009 from \$29.0 million in the year ended December 31, 2008, mainly due to the depreciation of the ruble, as well as cost cutting measures. Professional services expenses, which include auditing, accounting, legal and engineering fees, and insurance services increased by \$6.1 million, or 41.4%, to \$20.7 million in the year ended December 31, 2009 from \$14.6 million in the year ended December 31, 2008 primarily due to increases in consulting fees. Other administrative and operating expenses decreased by \$22.1 million, or 37.7%, to \$36.6 million in the year ended December 31, 2009 from \$58.7 million in the year ended December 31, 2008 due to a decrease in asset retirement obligations at Chelyabinsk Metallurgical Plant, Urals Stampings Plant, Moscow Coke and Gas Plant and Izhstal in the amount of \$9.0 million, as well as a decrease in allowance for doubtful advances paid and other accounts receivable at Urals Stampings Plant, Mechel Campia Turzii and Chelyabinsk Metallurgical Plant due to a decreased exposure to losses in the amount of \$5.4 million, and also due to effect of cost cutting measures implemented at our companies and the depreciation of the ruble.

Ferrous alloys segment

Selling and distribution expenses, consisting predominately of transportation expenses related to our selling activities, increased by \$5.5 million, or 53.9%, to \$15.7 million in the year ended December 31, 2009 from \$10.2 million in the year ended December 31, 2008. As a percentage of the ferroalloy segment revenues, selling and distribution expenses increased from 1.7% in the year ended December 31, 2008 to 3.6% in the year ended December 31, 2009, mainly due to a decrease in the sales prices of all our products.

Table of Contents

Taxes other than income tax amounted to \$8.2 million in the year ended December 31, 2009, an increase of \$4.8 million, or 141.2%, from \$3.4 million in the year ended December 31, 2008. The increase was due to gains recognized in 2008 which did not recur in 2009. In the year ended December 31, 2008 a reduction in income tax accruals for 2005, 2006 and 2007 was recognized at Southern Urals Nickel Plant in the amount of \$2.1 million, because gains from the forgiveness of tax fines and penalties can be excluded from taxable profit. As a percentage of segment revenues, these taxes increased from 0.6% in the year ended December 31, 2008 to 1.9% in the year ended December 31, 2009. Property and land taxes amounted to \$3.9 million in the year ended December 31, 2009, a decrease of \$0.9 million, or 18.8%, from \$4.8 million in the year ended December 31, 2008.

Allowance for doubtful accounts decreased by \$4.3 million from \$2.2 million loss in the year ended December 31, 2008, to \$2.1 million income in the year ended December 31, 2009, due to the decrease in outstanding accounts receivable provided for as of December 31, 2009, as well as collection of certain accounts receivable provided for as of December 31, 2008.

Loss on write-off of property, plant and equipment increased by \$15.8 million, or 100.0%, to \$15.8 million in the year ended December 31, 2009 from nil in the year ended December 31, 2008 due to the write-off of obsolete property, plant and equipment and construction-in-progress at Southern Urals Nickel Plant and Kazakhstansky Nickel Mining Company.

General, administrative and other expenses decreased by \$20.0 million, or 42.1%, to \$27.5 million in the year ended December 31, 2009, from \$47.5 million in the year ended December 31, 2008. Payroll and related social taxes decreased by \$2.4 million, or 16.7%, to \$12.0 million in the year ended December 31, 2009 from \$14.4 million in the year ended December 31, 2008 due to reduced working hours at our companies in the first quarter of 2009. Social expenses (including pension obligations) decreased by \$7.2 million, or 75.0%, to \$2.4 million in the year ended December 31, 2009 from \$9.6 million in the year ended December 31, 2008 mainly due to the depreciation of the ruble and a reduction in social programs in 2009 necessitated by the global financial crisis. Rent and maintenance, business travel expenses, bank charges and office expenses increased by \$1.8 million, or 48.6%, to \$5.5 million in the year ended December 31, 2009 from \$3.7 million in the year ended December 31, 2008, mainly due to the start of active production at Voskhod-Chrome followed by an increase in headcount of administrative employees. Professional services expenses, which include auditing, accounting, legal and engineering fees, and insurance services decreased by \$1.5 million, or 37.5%, to \$2.5 million in the year ended December 31, 2009 from \$4.0 million in the year ended December 31, 2008 due to a reduction in the number of consulting projects for which external advisors were engaged. Other administrative and operating expenses decreased by \$10.7 million, or 67.7%, to \$5.1 million in the year ended December 31, 2009 from \$15.8 million in the year ended December 31, 2008, mainly due to the effect of cost cutting measures implemented at our companies and the depreciation of the ruble.

Power segment

Selling and distribution expenses consisted almost entirely of electricity transmission costs incurred by our Kuzbass Power Sales Company for the usage of the power grid, through which electricity is distributed to the end consumers. These costs are incurred by all power distribution companies under agreements between such companies and the grid operator. These expenses decreased by \$78.7 million, or 31.0%, to \$175.3 million in the year ended December 31, 2009 from \$254.0 million in the year ended December 31, 2008 due to a decrease in electricity volumes transmitted through the power grid as well as the depreciation of the ruble.

Taxes other than income tax amounted to \$3.0 million in the year ended December 31, 2009, a decrease of \$0.3 million, or 9.1%, from \$3.3 million in the year ended December 31, 2008 which was due to fines and penalties of \$1.2 million at Southern Kuzbass Power Plant caused by the environmental emissions above regulatory limits in 2008 which did not recur in 2009.

Allowance for doubtful accounts decreased by \$9.6 million, to \$0.2 million in the year ended December 31, 2009 from \$9.8 million in the year ended December 31, 2008, due to a decrease in outstanding accounts receivable provided for as of December 31, 2009, as well as collection of certain accounts receivable provided for as of December 31, 2008. In accordance with our accounting policy we apply specific rates to

Table of Contents

overdue accounts receivable of our companies depending on the history of cash collections and future expectations of conditions that might impact the collectability of accounts of each of our companies. Since the fourth quarter of 2009 the overdue balances decreased, and therefore the allowance expenses also decreased.

General, administrative and other expenses decreased by \$6.4 million, or 37.1%, to \$10.9 million in the year ended December 31, 2009 from \$17.3 million in the year ended December 31, 2008 due to the depreciation of the ruble, as well as the effect of cost cutting measures implemented at our companies in 2009.

Operating income

Operating income decreased by \$2,310.7 million, or 90.4%, to \$245.6 million in the year ended December 31, 2009 from \$2,556.3 million in the year ended December 31, 2008. Operating income as a percentage of consolidated revenues decreased to 4.3% in the year ended December 31, 2009 from 25.7% in the year ended December 31, 2008, mainly due to a decrease in gross margin coupled with the decrease in sales prices in all segments in 2009.

The table below sets out operating income by segment, including as a percentage of segment revenues.

Operating Income by Segment	Year Ended December 31, 2009		Year Ended December 31, 2008	
	Amount	% of Segment Revenues	Amount	% of Segment Revenues
	(In thousands of U.S. dollars, except for percentages)			
Mining segment	205,180	9.7%	1,827,174	40.0%
Steel segment	(18,497)	(0.6)%	746,514	13.9%
Ferrous alloys segment	(27,586)	(6.4)%	(50,517)	(8.7)%
Power segment	40,702	4.7%	29,406	2.9%
Elimination of intersegment unrealized (profit) loss ⁽¹⁾	45,856		3,751	
Consolidated operating income	245,644		2,556,269	

- (1) Our management evaluates performance of our segments before the effect of elimination of unrealized profit in inventory balances of segments that was generated by the segments but not recognized as profit in our consolidated financial statements until the sale of such inventories to third parties. Therefore, we present our segments before such elimination, the effect of which is presented separately. The significant increase of intersegment unrealized profit adjustment in the year ended December 31, 2009 in comparison with the year ended December 31, 2008 was due to the decrease in gross margin of our mining and ferrous alloy segments in 2009, followed by a decrease in the sales prices.

Mining segment

Mining segment operating income decreased by \$1,622.0 million, or 88.8%, to \$205.2 million in the year ended December 31, 2009 from \$1,827.2 million in the year ended December 31, 2008. The operating margin percentage decreased to 9.7% in the year ended December 31, 2009 from 40.0% in the year ended December 31, 2008, mainly

due to the decrease in coking and steam coal and iron ore sales prices as a result of the global financial crisis.

Steel segment

Steel segment operating income decreased by \$765.0 million, or 102.5%, to \$18.5 million loss in the year ended December 31, 2009 from \$746.5 million income in the year ended December 31, 2008. The operating margin percentage decreased to negative 0.6% in the year ended December 31, 2009 from 13.9% in the year ended December 31, 2008 due to the decrease in sales prices for all our products as a result of the global financial crisis.

Ferrous alloys segment

Ferrous alloys segment operating loss decreased by \$22.9 million, or 45.3%, to a \$27.6 million loss in the year ended December 31, 2009 from \$50.5 million loss in the year ended December 31, 2008. The operating

Table of Contents

margin percentage increased to negative 6.4% from negative 8.6%, mainly due to the decrease in cost of goods resulting from the write-down of most raw materials and finished goods in stock as of December 31, 2008 to their net realizable values at the end of 2008.

Power segment

Power segment operating income increased by \$11.3 million, or 38.4%, to \$40.7 million in the year ended December 31, 2009 from \$29.4 million in the year ended December 31, 2008. The operating margin percentage increased to 4.7% from 2.9% due to decreases in selling and distribution expenses and allowance for doubtful accounts.

Other income and expense, net

Other income and expense, net consists of income (loss) of equity investees, interest income, interest expense, gain on revaluation of trading securities, other income and foreign exchange gain. The table below sets forth these costs for the years ended December 31, 2009 and 2008, including as a percentage of revenues.

Other Income and Expense, Net	Year Ended December 31, 2009		Year Ended December 31, 2008	
	Amount	% of Revenues	Amount	% of Revenues
	(In thousands of U.S. dollars, except for percentages)			
Income (loss) from equity investees	1,200	0.0%	717	0.0%
Interest income	21,445	0.4%	11,614	0.1%
Interest expense	(498,986)	(8.7)%	(324,083)	(3.3)%
Other income, net	500,257	8.7%	(18,821)	(0.2)%
Foreign exchange gain (loss)	(174,336)	(3.0)%	(877,428)	(8.8)%
Total	(150,420)	(2.6)%	(1,208,001)	(12.1)%

Income from equity investees was \$1.2 million in the year ended December 31, 2009 compared to \$0.7 million in the year ended December 31, 2008 and consisted of our share of income from our equity investments, such as Toplofikatsia Rousse and Southern Kuzbass Coal Company.

Interest income increased by \$9.8 million, or 84.5%, to \$21.4 million in the year ended December 31, 2009 from \$11.6 million in the year ended December 31, 2008. The increase was mainly due to the receipt of interest income from asset management agreements with Uglemetbank in the amount of \$9.5 million.

Interest expense increased by \$174.9 million, or 54.0%, to \$499.0 million in the year ended December 31, 2009 from \$324.1 million in the year ended December 31, 2008. The increase was associated with the overall increase in average loan balances in the year ended December 31, 2009.

Other income increased by \$519.1 million, or 2,762.0%, from \$18.8 million loss in the year ended December 31, 2008 to a \$500.3 million gain in the year ended December 31, 2009. The increase was mainly due to the effect of the remeasurement of the contingent liability payments related to the Bluestone acquisition. The change in the fair value of our preferred shares during the post-acquisition period through December 31, 2009 resulted in a decrease of

\$494.2 million in the CVR contingent payment. For a more detailed description of the Bluestone acquisition see note 3(e) to our consolidated financial statements. Also in the year ended December 31, 2009, we recorded other income from gain on accounts payable with expired legal term and gain on forgiveness of fines and penalties of \$3.8 million at Beloretsk Metallurgical Plant and Mechel Trading, as well as income from other sales in the amount of \$15.0 million.

Foreign exchange loss decreased by \$703.1 million, or 80.1%, to \$174.3 million in the year ended December 31, 2009 from \$877.4 million in the year ended December 31, 2008. This foreign exchange loss was primarily attributable to losses from revaluation of the U.S. dollar denominated syndicated loan arrangement for refinancing of the Yakutugol acquisition and the Oriel acquisition. The decrease in foreign exchange losses was due to the strengthening of the ruble exchange rate as of December 31, 2009 in comparison with December 31, 2008.

Table of Contents*Income tax expense*

Income tax expense decreased by \$100.0 million, or 84.1%, to \$18.9 million in the year ended December 31, 2009 from \$118.9 million in the year ended December 31, 2008, due to a decrease in operating income. Our effective tax rate increased to 19.8% from 8.8%. The increase in effective tax rate was mainly due to the fact that in the year ended December 31, 2008, income from a decrease in statutory tax rates in Russia and Kazakhstan in the amount of \$341.1 million was recognized. The gain resulting from the remeasurement of the contingent liability payment related to the Bluestone acquisition in the amount of \$494.2 million was recorded as a non-taxable gain and, therefore, it had no effect on the amount of income tax expenses.

Net income attributable to non-controlling interests

Net income attributable to non-controlling interests decreased by \$86.2 million, or 97.1%, to \$2.6 million in the year ended December 31, 2009 from \$88.8 million in the year ended December 31, 2008. The net income attributable to non-controlling interests in 2009 consisted of the share of non-controlling shareholders in the net income of Kuzbass Power Sales Company of \$2.6 million, of Southern Urals Nickel Plant of \$0.4 million, of Korshunov Mining Plant of \$2.8 million, of Urals Stampings Plant of \$2.2 million and of Mechel Mining of \$8.3 million. These items were partially offset by income from share in losses of Mechel Targoviste of \$5.2 million, Mechel Campia Turzii of \$5.5 million, of Izhstal of \$1.6 million and of Southern Kuzbass Coal Company of \$1.7 million.

Net income attributable to shareholders of Mechel

For the reasons set forth above, net income attributable to our shareholders decreased by \$1,066.8 million, or 93.5%, to \$73.7 million in the year ended December 31, 2009 from \$1,140.5 million in the year ended December 31, 2008.

Net (loss) income attributable to common shareholders of Mechel

Net income attributable to our common shareholders decreased by \$1,079.7 million, or 94.7%, to \$60.8 million loss in the year ended December 31, 2009 from \$1,140.5 million income in the year ended December 31, 2008 due to the payment of dividends on preferred shares of \$134.5 million in the year ended December 31, 2009.

Liquidity and Capital Resources*Capital requirements*

We expect that our principal capital requirements in the near future will be for financing the working capital needs of our business and for funding the following: capital expenditures, repayment of maturing debt, acquisitions and payment of dividends on preferred shares.

Our business is heavily dependent on machinery for the production of steel and steel products, as well as investments in our mining operations. Investments to maintain and expand production facilities are, accordingly, an important priority and have a significant effect on our cash flows and future results of operations. We intend to focus our capital spending on the implementation of projects, which we view as key to carrying out our business strategy. We may undertake other projects assigned a lower priority under our current capital investment plans if sources of long-term financing can be secured on favorable terms. See Item 4. Information on the Company Capital Investment Program for the objectives of our capital investment program and its details. Over the next three years, i.e., 2011-2013, we expect our capital expenditures on our metals production facilities to total approximately \$1.1 billion, approximately 91% of which will be in 2011-2012, and approximately 9% in 2013. We intend to direct approximately \$2.1 billion for the construction of a rail branch line to the Elga coal deposit and the development of the Elga coal deposit during

the period from 2011 to 2013. We intend to finance our capital investments with cash flow from operations and external financing sources.

Table of Contents

We continue to consider acquisitions as one of our major growth strategies. Historically, funding of acquisitions has come from cash flows from existing operations and external financing sources.

Our total outstanding debt as of December 31, 2010 and 2009 was \$7,318.4 million and \$5,997.5 million, respectively. See Item 11. Quantitative and Qualitative Disclosures About Market Risk for information regarding the type of financial instruments, the maturity profile of debt, currency and interest rate structure.

In 2010 and 2009, we paid dividends of \$23.3 million and \$208.1 million, respectively, out of which \$8.8 million and \$134.5 million, respectively, was paid on preferred shares. See Item 8. Financial Information Dividend Distribution Policy for a description of our dividend policy.

Capital resources

Historically, our major sources of cash have been cash generated from operations, bank loans and ruble bonds, and we expect these sources will continue to be our principal sources of cash in the future. We may also raise cash through equity and debt financings in international capital markets. For financing of our capital investment program we have also relied on financings secured by foreign export credit agency guarantees. We do not use off-balance sheet financing arrangements.

The table below summarizes our cash flows for the periods indicated.

	Year Ended December 31		
	2010	2009	2008
	(In thousands of U.S. dollars)		
Net cash used in/provided by operations	(147,371)	561,669	2,229,941
Net cash used in investing activities	(1,119,203)	(709,931)	(3,249,737)
Net cash provided by financing activities	1,210,125	375,434	1,247,623

Net cash used in operating activities was \$147.4 million in the year ended December 31, 2010, and net cash provided by operating activities was \$561.7 million and \$2,229.9 million in the years ended December 31, 2009 and 2008, respectively. The operating cash inflows were derived from payments received from sales of our mining, steel, ferroalloys and power products, reduced by cash disbursements for direct labor, raw materials and parts, selling, distribution and operating expenses, interest expense and income taxes.

Net cash provided by operating activities before changes in working capital items was \$1,274.5 million in the year ended December 31, 2010. Below we analyze major changes in working capital items which in the aggregate accounted for \$1,421.9 million in cash provided by operating activities, resulting in net cash used in operating activities of \$147.4 million.

Working capital items accretive to operating cash flows:

an increase in advances received of \$86.0 million due to an increase in the number of customers working on a prepayment basis both in export and domestic markets;

an increase in accrued taxes and other liabilities of \$142.8 million due to an increase in taxes payable, wages and salaries and interest accrued for the year ended December 31, 2010;

an increase in accounts payable of \$43.9 million due to an overall increase in purchase volumes and purchase prices across all our segments in the year ended December 31, 2010; and

a decrease in advance payments to non-state pension funds of \$4.9 million due to changes in pension programs.

Working capital items reducing operating cash flows:

an increase in accounts receivable of \$148.2 million primarily explained by increase in sales of mining products by Mechel Carbon and increase in sales by new foreign subsidiaries of Mechel-Service;

an increase in inventories of \$761.7 million due to a significant increase of finished goods and raw materials held in stock at the warehouses of Yakutugol, Bluestone, Southern Kuzbass Coal Company,

Table of Contents

Chelyabinsk Metallurgical Plant, Urals Stampings Plant, Izhstal, and Mechel-Service as of December 31, 2010. The main reason for the change in the stock level was the increase in production volume across all our segments, higher pricing for new materials purchased and also consolidation of inventory balances of Laminorul Plant and Mechel Remservice which were acquired during the year ended December, 31, 2010;

an increase in balances with related parties of \$506.7 million primary due to transactions with related metallurgical plants, Metallurg-Trust and Usipar; and

an increase in other current assets of \$260.5 million primary due to an increase of VAT and income tax receivable, advances paid, and capitalized bank origination fees in the year ended December 31, 2010.

Net cash provided by operating activities before changes in working capital items was negative \$48.6 million in the year ended December 31, 2009 as compared to positive \$2,599.3 million in the year ended December 31, 2008. Below we analyze major changes in working capital items, which in the aggregate accounted for \$610.3 million in cash provided by operating activities, resulting in net cash provided by operating activities of \$561.7 million.

Working capital items accretive to operating cash flows:

a decrease in accounts receivable of \$97.3 million primarily explained by an improved cash collection in our steel segment due to a decrease in the number of customers experiencing liquidity problems in 2009 as compared to 2008;

a decrease in inventories of \$481.3 million due to a significant decrease of finished goods and raw materials held in stock at the warehouses of Southern Kuzbass Coal Company, Chelyabinsk Metallurgical Plant, Mechel Carbon AG, Mechel Campia Turzii and Mechel Trading as of December 31, 2009. The main reason for the change in the stock level was the decrease in customer demand across all our segments;

an increase in advances received of \$30.5 million due to an increase in the number of customers working on a prepayment basis both in export and domestic markets;

an increase in accrued taxes and other liabilities of \$38.5 million due to an increase in taxes payable, wages and salaries and interest accrued for the year ended December 31, 2009;

a decrease in deferred revenue and cost of inventory in transit, net of \$10.5 million due to a decrease in nickel sales volumes and sales prices in the year ended December 31, 2009;

a decrease in other current assets of \$131.3 million primary due to a decrease of VAT and income tax receivable at Chelyabinsk Metallurgical Plant, Mechel Trading House, Mechel Service, Voskhod-Oriel and Voskhod-Chrome caused by the losses incurred by these companies in the year ended December 31, 2009, which resulted in overpayment of taxes payable in advance in accordance with applicable tax requirements; and

a decrease in advance payments to non-state pension funds of \$7.5 million due to payments made by these funds on the individual pension accounts of the participants of pension programs.

Working capital items reducing operating cash flows:

a decrease in accounts payable of \$100.1 million due to an overall decrease in purchase volumes and purchase prices across all our segments in the year ended December 31, 2009 because of the global financial crisis; and

an increase in balances with related parties of \$77.4 million primary due to transactions with related metallurgical plants.

Net cash used in investing activities was \$1,119.2 million in the year ended December 31, 2010 and \$709.9 million in the year ended December 31, 2009. Substantially all of the cash used for investing activities in the years ended December 31, 2010 and 2009 related to the acquisition of businesses, mineral licenses and

Table of Contents

property, plant and equipment. Expenditures related to the acquisition of businesses and equity method investments in our subsidiaries amounted to \$89.5 million and \$11.5 million in the years ended December 31, 2010 and 2009, respectively. Capital expenditures relating to purchases of property, plant and equipment and purchases of mineral licenses amounted to \$990.1 million and \$612.7 million in the years ended December 31, 2010 and 2009, respectively.

Net cash provided by financing activities was \$1,210.1 million in the year ended December 31, 2010 and \$375.4 million in the year ended December 31, 2009. We received short-term debt proceeds of \$4,529.5 million and repaid short-term debt of \$5,682.8 million in the year ended December 31, 2010, and received short-term debt proceeds of \$1,412.0 million and repaid short-term debt of \$3,704.1 million in the year ended December 31, 2009.

We received long-term debt proceeds of \$3,651.9 million and repaid long-term debt of \$1,191.9 million in the year ended December 31, 2010, and received long-term debt proceeds of \$3,022.0 million and repaid long-term debt of \$99.2 million in the year ended December 31, 2009.

In 2010, we issued four ruble-denominated bonds in an aggregate principal amount of 20.0 billion rubles which equals \$669.5 million as of the respective time of issuance. The bonds were issued at 100% of par value. The interest rate was determined upon the issuance based on the bids of buyers and amounted to 9.75-10.0% per year. The balance outstanding as of December 31, 2010 was \$656.2 million and is classified as long-term debt. In 2010 and 2009, Sberbank provided long-term and short-term ruble and euro-denominated loans to our subsidiaries bearing interest at 6.5-16.5% per year. The outstanding balances as of December 31, 2010 and December 31, 2009 were \$913.0 million and \$281.7 million, respectively.

During 2010, VTB group provided ruble and Euro-denominated long-term and short-term loans to our group, bearing interest at 6.1-8.6% in the total amount of \$399.0 million. The aggregate outstanding balance as of December 31, 2010 was \$168.0 million.

Liquidity

We had cash and cash equivalents of \$340.8 million as of December 31, 2010 and \$414.7 million as of December 31, 2009. Our cash and cash equivalents were held in rubles (44.9% and 50.5% as of December 31, 2010 and December 31, 2009, respectively), U.S. dollars (26.3% and 41.7% as of December 31, 2010 and December 31, 2009, respectively), euros (17.8% and 5.0% as of December 31, 2010 and December 31, 2009, respectively) and certain other currencies of the CIS and Eastern Europe.

As of December 31, 2010 and December 31, 2009, we had unused credit lines of approximately \$943.6 million and \$491.4 million, respectively, out of total available credit lines of \$8,262.1 million and \$6,488.9 million, respectively. These credit lines permit drawings at a weighted average interest rate of approximately 9.9% and 14.7% as of December 31, 2010 and December 31, 2009, respectively.

The following table summarizes our liquidity as of December 31, 2010, 2009 and 2008.

Estimated Liquidity	December 31, 2010	December 31, 2009	December 31, 2008
	(In millions of U.S. dollars)		
Cash and cash equivalents	340.8	414.7	254.8
Amounts available under credit facilities	943.6	491.4	684.9

Total estimated liquidity	1,284.4	906.1	939.7
---------------------------	---------	-------	-------

Short-term debt (short-term borrowings and current portion of long-term debt) increased by \$154.8 million, or 8.1%, to \$2,077.8 million as of December 31, 2010 from \$1,923.0 million as of December 31, 2009.

Long-term debt net of current portion increased by \$1,166.2 million, or 28.6%, to \$5,240.6 million as of December 31, 2010 from \$4,074.5 million as of December 31, 2009. This increase was attributable to bond issuances and new financing received from Sberbank, VTB Bank, Bank of Moscow and various other banks.

Table of Contents

Our working capital increased by \$1,028.6 million, or 191%, to a working capital surplus of \$491.4 million as of December 31, 2010 from a \$537.1 million working capital deficit as of December 31, 2009. The increase in working capital was due to increase in investments into current assets such as inventory and accounts receivable based on favorable situation on our key markets.

At December 31, 2008, our total indebtedness was \$5,369.2 million, with a short-term portion of \$5,149.4 million, which included \$4,233.8 million in loans with covenant violations out of which \$1,563.6 million was long-term debt that was reclassified as short-term debt due to loan covenant violations. We had a working capital deficit of \$3,596.3 million. Since we had significant debt that we did not have the ability to repay without refinancing or restructuring, and our ability to do so was dependent upon continued negotiations with our banks, there was substantial doubt about our ability to continue as a going concern as of June 1, 2009, the date of the issuance of our consolidated financial statements for the year ended December 31, 2008.

Outlook for 2011

Our objective is to ensure that the group meets its liquidity requirements, continues capital expenditures, repays borrowings as they fall due, and continues as a going concern. To accomplish that, we have continued to secure additional borrowing facilities and renew or refinance existing facilities as described below. In addition, we have experienced increasing price levels for our products in 2010 compared to 2009. Since there is no certainty that such experience will continue in the future, our plans for 2011 are based on conservative price levels accompanied by a stable demand for our products. On this basis we expect operating cash flows to provide an increased source of funds in 2011 to be available for capital expenditures and debt servicing.

To refinance debt falling due in 2011, we intend to use our operating cash flow, obtain new long-term borrowing facilities, renew or refinance existing arrangements and extend the put options under our ruble bonds. In 2011, we expect to continue to issue additional ruble bonds and obtain bank borrowings to provide specific financing for our operations and capital projects. Our ability to incur additional debt, however, is limited by our restrictive covenants. See Item 5. Operating and Financial Review and Prospectus Restrictive Covenants.

We believe that cash generated from operations, current cash and short-term investments on hand, and short-term and long-term committed borrowings under our credit facilities will be sufficient to meet our working capital requirements, anticipated capital expenditures and scheduled debt payments in 2011. Furthermore we believe that we have sufficient flexibility in deferring our non-critical capital expenditures in case specific project financing is not obtained and in managing our working capital to provide further financial flexibility as needed.

Debt Financings in 2011

On February 22, 2011, we placed series 15 and series 16 non-convertible interest-bearing bonds in an aggregate principal amount of 10.0 billion rubles. The bonds are registered with the FSFM and admitted to trading and listed at MICEX. The bonds are due on February 9, 2021. The bonds bear a coupon to be paid every half-year. The interest rate for the first 6 coupons was set at 8.25% per annum. We will be entitled to set the interest rates for the following coupon periods at our discretion, in which case the bondholders will have the right to request that we buy back the bonds before each such coupon period starts. The bondholders have an option to demand repurchase of the bonds at par value which is due on February 13, 2014. If such option is exercised, we will be obliged to repurchase such bonds on February 21, 2014. Bondholders are also entitled to demand early redemption of the bonds in certain cases specified in the decision of issuance of the bonds, including when we fail to pay coupon on any of our bonds for more than 7 days or fail to repay the principal on any of our bonds for more than 30 days, or when we default on or are required to redeem any of our bonds. We are also entitled to redeem the bonds on February 18, 2014. The proceeds of the bonds will be used to fund the working capital of the group, refinancing of the existing loan agreements as well as

the construction of the Elga mining complex and other investment projects of the group.

On February 7, 2011, our subsidiary Southern Kuzbass Coal Company obtained a line of credit in the amount of 6.2 billion rubles to finance the construction of the second area at Sibirginsk Underground Mine.

Table of Contents

The loan facility has been provided by TransCreditBank OAO for a period of 5 years with an amortised monthly repayment starting on February 2014 until December 2015 and is to be repaid in full by February 6, 2016. Interest rate under the loan agreement is set at 9.65% per year. The borrower may prepay the loan at any time with a 14-day prior notice. The borrower's obligations under the loan agreement are guaranteed by Mechel OAO. The borrower's obligations under the loan agreement are secured by a pledge of its assets and equipment to be purchased with the proceeds received under the loan agreement at a total amount of \$30.0 million. Under the agreement Mechel must ensure that: the ratio of its consolidated net borrowings to EBITDA does not exceed 3.5:1.0 until June 30, 2011 and 3.0:1.0 thereafter; and the ratio of its EBITDA to consolidated interest expenses does not fall below 2:1 until June 30, 2011 and below 4:1 thereafter; and its shareholder's equity equals to or exceeds \$4.0 billion at all times. The facility agreement is governed by Russian law.

In February 2011, our subsidiary Chelyabinsk Metallurgical Plant obtained a working capital credit line totaling 4.3 billion rubles from Sberbank.

Debt Financings in 2010

During the course of 2010, we obtained the following major debt financings. See Description of Certain Indebtedness and Russian bonds for a summary description of the terms of these facilities.

In December 2010, we obtained a line of credit totaling 10 billion rubles from VTB Bank. As of December 31, 2010, we had drawn 5.0 billion rubles of this credit facility which was used to refinance our existing indebtedness and to finance our working capital.

In October 2010, our subsidiary Chelyabinsk Metallurgical Plant obtained a line of credit totaling 15.0 billion rubles from Sberbank. As of December 31, 2010, we had fully drawn this credit facility, which was used to refinance some of our short-term debt.

In September 2010, we signed a loan agreement in the amount of \$219.4 million and 192 million to finance a universal rolling mill installation project at our subsidiary Chelyabinsk Metallurgical Plant. The loan facility has been provided by BNP Paribas, Gazprombank and UniCredit. As of December 31, 2010, we had drawn \$5 million under this credit facility.

In September 2010, we refinanced our New Oriel Resources and New Yakutugol facilities, which were executed in 2009, with a Pre-Export Facility in the amount of \$2.0 billion.

In September 2010, we completed two placements of our non-convertible interest-bearing bonds of the 13th and 14th series in the aggregate amount of 10.0 billion rubles. The proceeds were used to fund the working capital of the group and to refinance existing loan agreements, as well as to finance the construction of the Elga mining complex and other investment projects of the group.

In April 2010, we completed placement of our non-convertible interest-bearing bonds of BO-03 series in the aggregate amount of 5.0 billion rubles. The proceeds were used to fund the working capital of the group and to refinance existing loan agreements, as well as to finance the construction of the Elga mining complex and other investment projects of the group.

In March 2010, we completed placement of our non-convertible interest-bearing bonds of BO-02 series in the aggregate amount of 5.0 billion rubles. The proceeds were used to fund the working capital of the group and to refinance existing loan agreements, as well as to finance the construction of the Elga mining complex and other investment projects of the group.

Debt Financings in 2009

As a result of the economic downturn and a sharp decline in demand and prices for our products starting from August 2008 and continuing into the first half of 2009, as well as due to a substantial increase in our total indebtedness in 2007 and early 2008 that was incurred mostly for the acquisition of Yakutugol in 2007 and Oriel Resources in 2008, we experienced a liquidity shortage in late 2008 and early 2009. We also breached various financial and non-financial covenants in our loan agreements at that time.

Table of Contents

Starting in late 2008 and throughout 2009, we worked with Russian and international lenders to obtain additional debt financing and to restructure major loans in order to finance our operations, continue to make the minimum levels of capital investments in our business and meet scheduled debt payments. In late 2008 and early 2009, to address our liquidity shortage we obtained several major loans from Russian state-owned banks, including:

Loan from VTB Bank. In November 2008, we obtained three one-year credit facilities in the total amount of 15 billion rubles (\$510.5 million) from VTB Bank. The credit facilities were initially due to mature in November 2009 but, in December 2009, were extended until 2012. We fully drew on this facility to fund the operations of Yakutugol, Southern Kuzbass Coal Company and Chelyabinsk Metallurgical Plant.

Loan from Sberbank. In November 2008, we obtained a credit facility in the amount of 3.3 billion rubles (\$112.3 million). The facility was initially due to mature in August 2009, but, in August 2009, was extended to August 2010. We fully repaid the facility in August 2010.

Loans from Gazprombank. In February 2009, we obtained two credit facilities in the total amount of \$1.0 billion from Gazprombank. The facilities were initially repayable in quarterly installments starting with the first quarter of 2010 through the first quarter of 2012 but, in February 2010, the maturity of the facilities was extended to 2013-2015. We fully drew on these facilities to partially repay the Yakutugol and Oriel Facility Agreements.

In July 2009, we completed the restructuring and refinancing of our Oriel Resources and Yakutugol facilities with a syndicate of 27 international and Russian banks. Our principal objective in negotiating the debt restructuring was to prolong loan repayments scheduled in year 2009 to year 2010 or later and reset the covenants in order to give us more time and flexibility to meet our debt obligations in anticipation of a recovery in commodity and steel prices. The loan agreements were modified as follows:

New Yakutugol Facility Agreement. This facility was amended for an amount equal to \$1.6 billion. The repayment of the loan provided for equal monthly installments from September 2009 to December 2012.

New Oriel Resources Facility Agreement. The facility was refinanced for an amount equal to \$1.0 billion. The maturity of the loan was extended from July 2009 to December 2012 and provided for equal monthly installments from July 2010 to December 2012.

Through the course of 2009, we also placed three series of ruble bonds in the total principal amount of 15.0 billion rubles (\$503.9 million). See [Russian bonds](#) for a summary description of the terms of these bonds.

Restrictive Covenants

Our loan agreements contain a number of covenants and restrictions, which include, but are not limited to, financial ratios, maximum amount of debt, minimum value of shareholder's equity and certain cross-default provisions. The covenants also include, among other restrictions, limitations on (1) indebtedness of certain companies in the group, and (2) amounts that can be spent for new investments and acquisitions. Covenant breaches generally permit lenders to demand accelerated repayment of principal and interest.

The table below sets out the requirements of our most significant restrictive debt covenants and the actual ratios/amounts as of December 31, 2010.

Table of Contents

Restrictive Covenant	Requirements	Actual as of December 31, 2010
Mechel's Shareholder Equity	greater than or equal to \$4.0 billion	\$4,642,825
Ratio of Mechel's Net Borrowings to EBITDA	shall not exceed 3.5:1	3.45
Ratio of Mechel's EBITDA to Net Interest Expense	shall not be less than 2:1	3.72

While we are currently in compliance with these restrictive covenants, we face the risk of future non-compliance. For a discussion of the impact of such non-compliance, see Risk Factor Risks Relating to Our Financial Condition and Financial Reporting Our business could be materially adversely affected if our lenders accelerate our debt. The ratio of net borrowings to EBITDA is reduced to 3:1 in 2011 and the ratio of EBITDA to net interest expense is increased to 4:1 in 2011, per our most restrictive credit facilities.

Description of Certain Indebtedness***Credit Facility Agreement for Mechel OAO from VTB Bank****General*

On December 27, 2010, VTB Bank opened a credit line for Mechel for the total amount of 10.0 billion rubles to finance our general activity.

Interest rate and interest period

We can borrow under the facility in tranches at the minimum amount of 150.0 million rubles and maximum tenor of 180 days each. The interest rate shall be agreed between the parties at the date of each drawing. As of December 31, 2010, we had drawn 5.0 billion rubles of this credit facility which was used to refinance our existing indebtedness and to finance our working capital.

Guarantee

The borrower's obligations under the loan facility agreement are guaranteed by Mechel Trading House and Mechel Trading.

Repayment and prepayments

Each tranche shall be repaid at its maturity. The final repayment of all tranches is to be made after two years from the date of the loan agreement. Repaid tranches can be redrawn.

The borrower may prepay the loan with a prior notice to VTB Bank. Prepayment within the first half of the life of each tranche is subject to a prepayment fee at 0.05%.

Covenants and other matters

We must ensure that the ratio of our consolidated net borrowings to EBITDA does not exceed 3.5:1 in 2010 and 3:1 afterwards, and that the ratio of our EBITDA to consolidated net interest expense does not fall below 2:1 in 2010 and 4:1 afterwards. The facility agreement permits dividend payments in amount of less than 60% of the net profit without prior written consent from VTB Bank if the ratio of our consolidated net borrowings to EBITDA does not exceed 3:1.

The loan facility agreement also contains certain customary representations and warranties, affirmative covenants, notice provisions and events of default, including change of control and cross-defaults to other debt.

The facility agreement is governed by Russian law.

New Credit Facility Agreement for Chelyabinsk Metallurgical Plant from Sberbank

General

On October 13, 2010, Sberbank opened a credit line for Chelyabinsk Metallurgical Plant for the total amount of 15.0 billion rubles to refinance short-term debt.

Interest rate and interest period

Interest for the period from the drawdown date until January 12, 2011 is payable at a rate 8.24% per year. Interest for the period from January 13, 2011 until maturity is payable at a rate of 3M Mosprime plus a margin of 4.5% per year (if the turnover at our companies accounts with Sberbank during each calendar quarter exceeds 25% of outstanding liabilities under the loan) and 3M Mosprime plus a margin of 5.0% per year (if the turnover at our companies accounts with Sberbank during each calendar quarter is less than 25% of outstanding liabilities under the loan). Accrued interest is payable on the 28th day of the last month of each three-month interest period. An additional fee of 1.35% per year is payable for the interest rate hedge for the Mosprime rate which is capped at 6.5% per year during the lifetime of the facility. Sberbank has the right to revise the interest rate with a 30 days prior notice.

Guarantee

The borrower's obligations under the loan facility agreement are guaranteed by Mechel.

Security

The borrower's obligations under the loan facility agreement are secured by a pledge of 25% plus 1 share of Beloretsk Metallurgical Plant and a pledge of equipment and machinery and real estate owned by the borrower at the total agreed value of no less than 4.5 billion rubles.

Repayment and prepayments

The facility is repayable in 8 equal quarterly installments starting on March 28, 2014. The final repayment date is October 12, 2015.

The borrower may prepay the loan with a prior notice to Sberbank. Prepayment is also subject to prepayment fee at 0.8% per year in case of earlier prepayment before October 12, 2012, or 0.25% per year in case of prepayment on or after October 13, 2012, but before October 13, 2013.

Covenants and other matters

The borrower must ensure that the ratio of our consolidated net borrowings to EBITDA does not exceed 5:1 in 2010 and 3:1 in 2011, the ratio of our EBITDA to consolidated net interest expense does not fall below 2:1 in 2010 and 4:1 in 2011, and our consolidated shareholder equity during the lifetime of the facility equals to or exceeds \$3.0 billion. The facility agreement permits dividend payments without prior written consent from Sberbank if the ratio of our consolidated net borrowings to EBITDA does not exceed 3:1.

The loan facility agreement also contains certain customary representations and warranties, affirmative covenants, notice provisions and events of default, including change of control and cross-defaults to other debt.

The facility agreement is governed by Russian law.

***Facility Agreement for Chelyabinsk Metallurgical Plant from BNP Paribas, Gazprombank and UniCredit
Universal Mill Facility Agreement***

General

On September 15, 2010, we signed a loan agreement to finance the universal rolling mill installation project at our subsidiary Chelyabinsk Metallurgical Plant. The new \$471.2 million facility consists of three tranches underwritten by BNP Paribas S.A., Gazprombank and UniCredit. Gazprombank's tranche is \$219.4 million, BNP Paribas's tranche is \$102.8 million and UniCredit's tranche is \$89.2 million. The credit facility benefits from insurance coverage of the Italian, German and Chinese export credit agencies: SACE, Euler Hermes and Sinasure, respectively.

Table of Contents

The purpose of the facility is to finance payments under two contracts: the equipment and technology supply contract executed with Danieli & C. Officine Meccaniche S.p.A. and the general construction contract executed with Minmetals Engineering Co. Ltd.

Interest rate and interest period

Interest on the facility tranche underwritten by Gazprombank (Facility A) is payable at LIBOR plus a margin of 6.75% per year during the period until the construction completion date and at LIBOR plus a margin of 6.25% per year after that date. Interest on the facility tranche underwritten by UniCredit (Facility B) is payable at EURIBOR plus a margin of 1.50% per year. Interest on the facility tranche underwritten by BNP Paribas (Facility C) is payable at EURIBOR plus a margin of 1.60% per year.

Accrued interest is payable twice a year on payment dates January 21 and July 21.

Repayment and prepayments

The borrower must repay the facilities in 13 equal semi-annual installments in respect of Facility A; 16 equal semi-annual installments in respect of Facility B; and 16 equal semi-annual installments in respect of Facility C.

Repayment starts on the first repayment date, which means in respect of each of the facilities, the first payment date (January 21 or July 21) falling after the earlier of (a) the end of the availability period and (b) the construction completion date. The availability period under all three facilities is 30 months from the signing date. Facility A must be repaid in full after six years following the first repayment date, Facilities B and C must be repaid in full after seven and a half years following the first repayment date.

The borrower may make a pro rata prepayment of the loan with the prior written consent of the lender. A prepayment of part of the loan must be of a minimum amount of \$10.0 million in respect of Facility A, and 10.0 million in respect of Facility B and Facility C.

Guarantee

The borrower's obligations under the loan facility agreement are guaranteed by Mechel OAO.

Security

The borrower's obligations under the loan facility agreement are secured by a pledge of 20% of the common shares of Chelyabinsk Metallurgical Plant. The borrower has also granted security over certain of its assets, including real estate and equipment to secure its obligations.

Covenants and other matters

Under the facility agreement acquisitions by members of our group are permitted if such acquisitions in aggregate do not exceed \$25.0 million for 2010 and any subsequent year or the total amount of such acquisition is fully financed by available excess cashflow.

The borrower may not, without prior consent from the lender, enter into any amalgamation, demerger, merger or reorganization except an intra-group reorganization on a solvent basis.

The facility agreement permits dividends if declared after June 1, 2010, or paid after July 17, 2010, provided that the ratio of our consolidated net borrowings to EBITDA does not exceed 3:1, or if such dividends are funded from excess cash flows and provided that no default occurs or would occur as a result of that payment.

Under the facility agreement Mechel must ensure that the ratio of the consolidated net borrowings to EBITDA does not exceed 5:1 in 2010 and 3:1 in 2011 and thereafter, and the ratio of EBITDA to consolidated interest expense does not fall below 2:1 in 2010 and below 4:1 in 2011 and thereafter and all the time Mechel's shareholder equity exceeds or equals \$3.0 billion. The facility agreement also contains negative

Table of Contents

pledge provisions prohibiting mortgage, pledge, or security on indebtedness in aggregate amount exceeding 40% of the total assets of the group.

The loan facility agreement also contains certain customary representations and warranties, affirmative covenants, notice provisions and events of default, including change of control and cross-defaults to other debt.

The facility agreement is governed by English law.

Pre-Export Facility Agreements

On September 6, 2010, ING Bank N.V. and The Royal Bank of Scotland N.V. as Co-ordinators, and BNP Paribas SA, Closed Joint Stock Company UniCredit Bank, Commerzbank Aktiengesellschaft, HSBC Bank plc, Natixis, OJSC Nordea Bank, Raiffeisen Zentralbank Oesterreich AG, Société Générale, UniCredit Bank AG (formerly known as Bayerische Hypo- und Vereinsbank AG), VTB Bank (Austria) AG, VTB Bank (Deutschland) AG and VTB Bank (France) SA as Mandated Lead Arrangers, and Morgan Stanley and Credit Suisse as lenders, agreed to extend to our subsidiaries Yakutugol, Southern Kuzbass Coal Company, Chelyabinsk Metallurgical Plant and Southern Urals Nickel Plant pre-export facilities in the total amount of \$2.0 billion. The loan facility agreements executed by our subsidiaries are identical in all material aspects except for the respective loan amounts thereunder and the security provided under each facility. The loan facility was made available to Yakutugol and Southern Kuzbass Coal Company in the amount of \$857.1 million each, to Chelyabinsk Metallurgical Plant in the amount of \$95.3 million, and to Southern Urals Nickel Plant in the amount of \$190.5 million.

The purpose of the pre-export facility was to refinance our New Oriel Resources Facility and New Yakutugol Facility.

The facility was drawn in two tranches, a 3-year and a 5-year.

Interest rate and interest period

Interest under the facilities is payable at LIBOR plus a margin, or at fixed rate that may be agreed with the lenders. The initial margin levels are set at 5% per year and 6% per year for the 3-year and the 5-year tranches, respectively. Initial margin levels are subject to downward adjustments based on the ratio of our net borrowings to EBITDA, with the first such adjustment to take place based on 2010 results.

Repayment and prepayments

The facilities are repayable in equal monthly installments after nine months' grace period on the first tranche and 15 months' grace period on the second tranche. Borrowers are entitled to prepayment subject to a 10 business day prior notice to the respective lender and on certain conditions specified in the facility agreements.

Guarantee

Yakutugol's obligations under the facility agreement are guaranteed in full by Mechel, Mechel Mining, Mechel Carbon and Mechel Trading, as well as by Southern Kuzbass Coal Company and Korshunov Mining Plant (in the amount of up to 2% of the value of its total assets). Southern Kuzbass Coal Company's obligations under the pre-export facility agreement are guaranteed in full by Mechel, Mechel Mining, Mechel Carbon, Mechel Trading and Yakutugol, as well as by Korshunov Mining Plant (for the latter in the amount of up to 2% of the value of its total assets). Chelyabinsk Metallurgical Plant's obligations under the pre-export facility agreement are guaranteed in full by Mechel, Mechel Trading and Mechel Service Global, as well as by Beloretsk Metallurgical Plant (in the amount of up to 2% of the value of its total assets). Southern Urals Nickel Plant's obligations under the pre-export facility agreement are

guaranteed in full by Mechel, Mechel Trading and Oriel Resources.

Table of Contents*Security*

Yakutugol's obligations under the loan facility agreement are secured by a pledge of equipment and machinery of the borrower at a total balance sheet value of \$5.1 million and a pledge of 14.99% of shares of Yakutugol and of 14.99% of shares of Southern Kuzbass Coal Company. Southern Kuzbass Coal Company's obligations under the loan facility agreement are secured by a pledge of equipment and machinery of the borrower at a total balance sheet value of \$5.0 million and a pledge of 14.99% of shares of Southern Kuzbass Coal Company and of 14.99% of shares of Yakutugol. Chelyabinsk Metallurgical Plant's obligations under the loan facility agreement are secured by a pledge of equipment and machinery of the borrower at a total balance sheet value of \$5.0 million and a pledge of 15% of shares of Chelyabinsk Metallurgical Plant. Southern Urals Nickel Plant's obligations under the loan facility agreement are secured by a pledge of equipment and machinery of Southern Urals Nickel Plant at a total balance sheet value of \$5.1 million and a pledge of 25% plus 1 share in Southern Urals Nickel Plant. Also, the obligations of each of the borrowers are secured respectively by assignment of rights under their export and offtake contracts and charge over their collection accounts.

The pledge of 29.99% of shares of each of Yakutugol and Southern Kuzbass Coal Company will be released when the ratios of Mechel's and Mechel Mining's net borrowings to EBITDA are less than or equal to 2.5:1 for two consecutive semi-annual periods, the outstanding debt under the facility does not exceed 50% of the total outstanding debt of the borrower, and there is no event of default continuing under the facility.

The pledge of 25% plus 1 share of Southern Urals Nickel Plant will be reduced to a pledge of 20% when the ratio of Mechel's net borrowings to EBITDA is less than or equal to 2.5:1 for two consecutive semi-annual periods, the outstanding debt under the facility extended to Southern Urals Nickel Plant has been reduced by 50%, and there is no event of default continuing under the facility.

Covenants and other matters

Under the facility agreements, Mechel may pay dividends if (i) its ratio of net borrowings to EBITDA is less than or equal to 3:1, (ii) the amount of dividends does not exceed 60% of Mechel's net profit for the respective year, and (iii) the amount of dividends on our preferred shares does not exceed 20% of our net profit for the respective year. Mechel Mining may pay dividends if its ratio of net borrowings to EBITDA is less than or equal to 3:1.

Acquisitions by our group in any given year are permitted if the aggregate value of such acquisitions do not exceed (i) \$50.0 million when the ratio of our net borrowings to EBITDA exceeds 3:1, (ii) \$250.0 million when the ratio of our net borrowings to EBITDA is within the range of 2.5:1 - 3:1, (iii) \$375.0 million when the ratio of our net borrowings to EBITDA is within the range of 2:1 - 2.5:1, or (iv) \$500.0 million when the ratio of our net borrowings to EBITDA is equal to or less than 2:1.

Under the facility agreements Mechel must ensure that: (i) the ratio of consolidated net borrowings to EBITDA does not exceed 3.5:1 for the year 2010 and 3:1 starting from June 30, 2011 and thereafter; (ii) the ratio of EBITDA to consolidated net interest expense does not fall below 2:1 for the year 2010 and 4:1 starting with period ending June 30, 2011 and thereafter; (iii) its shareholder equity does not fall below \$4.0 billion at any time; (iv) the total debt of Yakutugol and Southern Kuzbass Coal Company, excluding intragroup loans, does not exceed in aggregate \$4.3 billion in the aggregate; (v) the total debt of Chelyabinsk Metallurgical Plant and Southern Urals Nickel Plant, excluding intragroup loans, does not exceed \$1.4 billion and \$350 million respectively; and (vi) the equity of the borrowers does not fall below 6.5 billion rubles for Southern Kuzbass Coal Company, 4.5 billion rubles for Yakutugol, 5.5 billion rubles for Chelyabinsk Metallurgical Plant and 2.0 billion rubles for Southern Urals Nickel Plant.

The loan facility agreements also contain certain customary representations and warranties, affirmative covenants, notice provisions and events of default, including change of control and cross-defaults relating to other debt with certain limitations.

The facility agreements are governed by English law.

Amended Credit Facility Agreements for Yakutugol and Southern Kuzbass Coal Company from VTB Bank

In September 2010, our subsidiaries Yakutugol and Southern Kuzbass Coal Company each entered into agreements further amending the one-year credit facility agreements executed with VTB Bank in November 2008 and further amended in November 2009, for the total amount of 15.0 billion rubles.

Set out below are the amended terms and covenants of the facility agreements.

Interest rate and interest period

In September 2010, the interest rate was decreased to 9.75% per annum. VTB Bank may unilaterally increase the interest rate in accordance with the terms of the agreements. Any new interest rate becomes effective the month following the month when VTB Bank has informed the borrowers of the new rate.

Repayment and prepayment

The maturity of the facilities is November 25, 2012 for Southern Kuzbass Coal Company and November 26, 2012 for Yakutugol. Each of the facilities is to be repaid in six equal monthly tranches starting on June 27, 2012.

The premium for prepayment equals 0.8% of the prepayment amount if more than 3/4 of the term of the credit facility has elapsed, 1.0% of the prepayment amount if more than 1/4 but less than 3/4 of the term of the credit facility has elapsed, and 1.45% of the prepayment amount if less than 1/4 of the term of the credit facility has elapsed.

Covenants and other matters

Certain of the financial covenants provided under the facility agreements were amended. Pursuant to the amendments each borrower must provide for an aggregate turnover of accounts with the creditor in an amount proportionate to the share of the borrowings from the lender in its total credit portfolio.

The borrowers must obtain preliminary written approval from the lender to: (1) acquire stocks in amounts exceeding 10% of the value of the borrower's balance sheet assets; (2) borrow from or provide guarantees to parties outside our group (if aggregate net borrowings of our group exceed \$5.5 billion, otherwise notification to the creditor will suffice); (3) lend money, except to affiliates; (4) dispose of assets in amounts equal to or exceeding 5% of the value of the borrower's balance sheet assets, (5) perform any other transactions if they amount to or exceed 40% of the value of the borrower's balance sheet assets (except for export revenue pledges under the new Oriel Resources and Yakutugol facilities); (6) perform a reorganization or merger outside our group; (7) pay dividends; (8) cause dilution of the pledged stocks; or (9) change its core business.

Under the amended agreements, borrowers must ensure that the ratio of our consolidated net borrowings to EBITDA does not exceed 5:1 in 2010 and 3:1 in 2011 and the ratio of our EBITDA to consolidated interest expenses does not fall below 2:1 in 2010 and 4:1 in 2011.

On equal offer terms, the lender is entitled to perform as lead manager or financial consultant for any public offer of common shares or securities convertible into common shares of the borrowers or any offer of debt instruments conducted by the borrowers, as well as at any disposal of assets or stocks of the borrowers' subsidiaries. In addition, the lender is entitled to service, at market terms, the import/export transactions of the borrowers.

The loan facility agreements also contain certain customary representations and warranties, affirmative covenants, notice provisions and events of default, including change of control and cross-defaults relating to other debt

Table of Contents

Security

Since September 2010, Yakutugol and Southern Kuzbass Coal Company are no longer obliged to provide security for their obligations under the loan agreements.

The facility agreements are governed by Russian law.

Credit Facility Agreements for Yakutugol and Southern Kuzbass Coal Company from Gazprombank

General

On February 6, 2009, our subsidiaries Yakutugol and Southern Kuzbass Coal Company each entered into separate credit facility agreements with Gazprombank for a total amount of \$1.0 billion. In accordance with their terms, the credit facilities can be used for finance and operating activities, including financing affiliates and credit repayments. We used the advances under the facilities mainly for partial repayment of the original Oriel Resources and Yakutugol facilities prior to their refinancing in July 2009. The two credit facility agreements are identical in all material aspects except for the respective loan amounts thereunder: the credit facility was made available to Yakutugol in the amount of \$550.0 million and to Southern Kuzbass Coal Company in the amount of \$450.0 million. The loans were fully drawn in the first quarter of 2009. On February 24, 2010, the terms of the facility agreements were extended until February 2015.

Interest rate and interest period

Interest is paid on a monthly basis and was reduced during the term of the facility from a fixed rate of 14% to 7.5% per annum. Gazprombank may unilaterally, having provided 30 days prior notice, increase the interest rate if, *inter alia*, the CBR's refinancing rate increases.

Repayment and prepayments

Each of the facilities is to be repaid not later than February 6, 2015. Repayment is to be made in equal amounts on a quarterly basis by way of direct debit from the borrowers' accounts with the lender starting from the first quarter of 2013.

The borrowers may prepay the loans issued within the credit facilities in full or in part after February 24, 2011. Prepayment is free from any premium or penalty, subject to the borrowers providing 30 days prior notice to the lender.

Covenants and other matters

Under the amended agreements, the borrowers must ensure that the ratio of our consolidated net borrowings to EBITDA does not exceed 5:1 in 2010 and 3:1 in 2011 and the ratio of our EBITDA to consolidated interest expenses does not fall below 2:1 in 2010 and 4:1 in 2011.

Initially the facility was secured by a pledge of 35% of the common shares of Yakutugol and Southern Kuzbass Coal Company, but in February 2010, terms of the facility were amended and the borrowers' obligations are currently secured by a pledge of 25%+1 of the common shares of Yakutugol and Southern Kuzbass Coal Company. The number of pledged shares can be increased to 35% if we fail to comply with financial covenants.

The lender is entitled to unilaterally demand prepayment under the facility agreements if, *inter alia*, the financial situation of the borrowers deteriorates, including a situation where a borrower faces third party monetary claims

exceeding \$30.0 million.

The loan facility agreements also contain certain customary representations and warranties, affirmative covenants, notice provisions and events of default, including change of control provisions and cross-defaults relating to other debt.

The facility agreements are governed by Russian law.

Table of Contents***Russian bonds***

On June 21, 2006, we placed series 02 non-convertible interest-bearing bonds in an aggregate principal amount of 5.0 billion rubles. The bonds are registered with the FSFM and admitted to trading and listed at MICEX. The bonds are secured by a guarantee from Mechel Trading House. The bonds are due on June 12, 2013. The bonds bear a coupon to be paid on a semiannual basis. The interest rate for the first eight coupons was set at 8.4% per annum. The interest rate for the ninth and tenth coupons was set at 8.5% per annum. We set the interest rate for the following four coupons at our discretion, in which case the bondholders will have the right to request that we repurchase the bonds before each such coupon period starts. Hence, the bondholders have an option to demand repurchase of the bonds at par value which is due on June 10, 2011. We will be obliged to repurchase such bonds on June 20, 2011. Bondholders are also entitled to demand early redemption of the bonds in certain cases specified in the decision of issuance of the bonds, including when we fail to pay any coupon on any of our Russian bonds for more than 7 days or fail to repay the principal on any of our Russian bonds for more than 30 days, or when we default on or are required to redeem any of our Russian bonds.

On July 30, 2009, we placed series 04 non-convertible interest-bearing bonds in an aggregate principal amount of 5.0 billion rubles. The bonds are registered by the FSFM and admitted to trading and listed at MICEX. The bonds are secured by a guarantee from Yakutugol. The bonds are due on July 21, 2016. The bonds bear a coupon to be paid quarterly. The interest rate for the first 12 coupons was set at 19% per annum. We will be entitled to set the interest rates for the following coupon periods at our discretion, in which case the bondholders will have the right to request that we repurchase the bonds before each such coupon period starts. Hence, the bondholders have an option to demand repurchase of the bonds at par value commencing on July 21, 2012. We will be obliged to repurchase such bonds on July 31, 2012. The bonds are included on the CBR Lombard list; if the CBR excludes the bonds from this list, the bondholders may also demand repurchase of the bonds. Bondholders are also entitled to demand early redemption of the bonds in certain cases specified in the decision of issuance of the bonds, including when we fail to pay coupon on any of our Russian bonds for more than 7 days or fail to repay the principal on any of our Russian bonds for more than 30 days, or when we default on or are required to redeem any of our Russian bonds. We are also entitled to redeem the bonds on July 26, 2012. The proceeds of the bond were used to fund the construction of the Elga mining complex.

On October 20, 2009, we placed series 05 non-convertible interest-bearing bonds in an aggregate principal amount of 5.0 billion rubles. The bonds are registered with the FSFM and admitted to trading and listed at MICEX. The bonds are secured by a guarantee from Yakutugol. The bonds are due on October 9, 2018. The bonds bear a coupon to be paid quarterly. The interest rate for the first 12 coupons was set at 12.5% per annum. We will be entitled to set the interest rates for the following coupon periods at our discretion, in which case the bondholders will have the right to request that we repurchase the bonds before each such coupon period starts. Hence, the bondholders have an option to demand repurchase of the bonds at par value commencing on October 11, 2012. We will be obliged to repurchase such bonds on October 19, 2012. The bonds are included on the CBR Lombard list; if the CBR excludes the bonds from this list, the bondholders may also demand repurchase of the bonds. Bondholders are also entitled to demand early redemption of the bonds in same cases as described above with respect to series 04 bonds. We are also entitled to redeem the bonds on October 16, 2012. The proceeds of the bond were used to fund the construction of the Elga mining complex.

On November 13, 2009, we placed non-convertible interest-bearing exchange bonds in an aggregate principal amount of 5.0 billion rubles. The bonds are admitted to trading at MICEX. The bonds are due on November 9, 2012. The bonds bear a coupon to be paid on a semi-annual basis. The interest rate for the first four coupons was set at 12.5%, and we will be entitled to determine the interest rate for the following coupon periods at our discretion, in which case the bondholders will have the right to request that we repurchase the bonds. The bondholders have an option to demand repurchase of the bonds at par value commencing on November 3, 2011. We will be obliged to repurchase such bonds on November 16, 2011. Bondholders are also entitled to demand early redemption of the bonds if: (1) our

shares are delisted from a respective stock exchange, (2) we declare default under these or any other Russian bonds, or (3) we are required to redeem any

Table of Contents

other bonds. We used the proceeds of the bond to optimize our credit portfolio by repaying in part the more expensive credit facilities we incurred earlier.

On March 16, 2010, we placed non-convertible interest-bearing exchange bonds in an aggregate principal amount of 5.0 billion rubles. The bonds are admitted to trading at MICEX. The bonds are due on March 12, 2013. The bonds bear a coupon to be paid on a semi-annual basis. The interest rate for all six coupons was set at 9.75%. Bondholders are entitled to demand early redemption of the bonds if: (1) our shares are delisted from a respective stock exchange, (2) we declare default under these or any other Russian bonds, or (3) we are required to redeem any other bonds. We used the proceeds of the bond to optimize our credit portfolio by repaying more expensive short-term secured bank loans.

On April 28, 2010, we placed 5,000,000 non-convertible interest-bearing exchange bonds in an aggregate principal amount of 5.0 billion rubles. The bonds are admitted to trading at MICEX. The bonds are due on April 24, 2013. The bonds bear a coupon to be paid on a semi-annual basis. The interest rate for all six coupons was set at 9.75%. Bondholders are entitled to demand early redemption of the bonds if: (1) our shares are delisted from a respective stock exchange, (2) we declare default under these or any other Russian bonds, or (3) we are required to redeem any other bonds. We used the proceeds of the bond to optimize our credit portfolio by repaying more expensive short-term secured bank loans.

On September 7, 2010, we placed series 13 and series 14 non-convertible interest-bearing bonds in an aggregate principal amount of 10.0 billion rubles. The bonds are registered with the FSFM and admitted to trading and listed at MICEX. The bonds are due on August 25, 2020. The bonds bear a coupon to be paid semi-annually. The interest rate for the first 10 coupons was set at 10.0% per annum. We will be entitled to set the interest rates for the following coupon periods at our discretion, in which case the bondholders will have the right to demand that we repurchase the bonds before each such coupon period starts. The bondholders have an option to demand repurchase of the bonds at par value commencing on August 27, 2015. We will be obliged to repurchase such bonds on September 4, 2015. Bondholders are entitled to demand early redemption of the bonds in the same cases as described above with respect to series 04 and series 05 bonds. We are also entitled to redeem the bonds on September 1, 2015. The proceeds of the bond were used to fund the construction of the Elga mining complex and other investment projects of the Group.

Table of Contents**Contractual Obligations and Commercial Commitments**

The following table sets forth the amount of our contractual obligations and commercial commitments as of December 31, 2010.

Contractual Obligations and Commercial Commitments	Total	Payments Due by Period			More Than 5 Years
		Less Than 1 Year	2-3 Years	4-5 Years	
(In thousands of U.S. dollars)					
Short-Term Borrowings and Current Portion of Long-Term Debt ⁽¹⁾	2,077,809	2,077,809			
Long-Term Debt Obligations, Net of Current Portion ⁽¹⁾	5,240,620		3,142,075	2,032,556	65,989
Operating Lease Obligations	310,611	14,121	20,317	20,069	256,104
Purchase Obligations ⁽²⁾	201,352	201,352			
Structured Taxes Payable					
Settlement of Retirement Obligations ⁽³⁾	56,220	7,004	10,231	5,271	33,714
Pension and Post Retirement Benefits ⁽⁴⁾⁽⁵⁾	188,068	34,596	27,057	31,648	94,767
Short-term Finance Lease Obligations	49,665	49,665			
Long-term Finance Lease Obligations	130,367		75,645	43,002	11,720
Contingent payment for Bluestone acquisition	21,999		21,999		
Contractual commitments to acquire plant, property and equipment, raw materials and for delivery of goods and services ⁽⁶⁾	5,539,389	4,605,976	774,223	84,507	74,683
Estimated interest expense ⁽⁷⁾	2,097,749	585,009	1,023,358	489,382	
Estimated average interest rate ⁽⁷⁾		7.3%	6.7%	5.8%	
Total Contractual Obligations and Commercial Commitments	15,913,849	7,575,532	5,094,905	2,706,435	536,973

(1) Does not include interest. Interest payable as of December 31, 2010 amounted to \$5.5 million and \$43 million for Short-Term Borrowings and Current Portion of Long-Term Debt and Long-Term Debt Obligations, Net of Current Portion, respectively. Interest payable is included in amount of \$48.5 million in current period figure. In the year ended December 31, 2010, our interest expense was \$558.4 million and we paid out \$565.2 million in interest, net of amounts capitalized.

(2) Accounts payable for capital expenditures.

(3) See note 15 to our consolidated financial statements.

(4) See note 16 to our consolidated financial statements.

(5) Includes \$153.5 million pension and post-retirement benefits due in more than one year.

(6) See note 24 to our consolidated financial statements.

- (7) Interest expense is estimated for a five-year period based on (1) estimated cash flows and change of the debt level, (2) forecasted LIBOR rate where applicable, (3) actual long-term contract interest rates and fixed rates, forecasted with reasonable assurance on the basis of historic relations with major banking institutions.

We have also guaranteed the fulfillment of obligations to third parties under various debt and lease agreements. The maximum potential amount of future payments under these guarantees as of December 31, 2010 amounted to \$7,226 million, of which \$7,223 million related to guarantees given by us for our subsidiaries.

Commitments for capital expenditures were \$2,877 million as of December 31, 2010. This amount includes our contractual commitment related to the construction of a rail branch line to the Elga coal deposit, which we have undertaken pursuant to the terms of our subsoil license for the Elga coal deposit. The total amount of commitments for capital expenditures under this contract is estimated to be \$447 million, including

Table of Contents

VAT, and is subject to adjustment. Capital commitments under this contract are expected to be fulfilled by December 2011, including the completion of the rail branch construction in 2011. This estimate of \$447 million was derived from the amount of contractual obligations incurred pursuant to Yakutugol's agreement for construction of the rail branch to the Elga coal deposit; this estimate is subject to change and does not include other capital expenditures that will be necessary to commence production in the Elga license area. For more information regarding capital expenditures related to development of the Elga license area, see Item 4. Information on the Company Mining Segment Mineral reserves (coal, iron ore and limestone) Coal.

Inflation

Inflation in the Russian Federation was 8.8% in 2010, 8.8% in 2009 and 13.3% in 2008. Inflation has generally not had a material impact on our results of operations during the period under review in this section, as we were able to increase selling prices in line with increases in ruble-denominated costs. However, we cannot guarantee that inflation will not materially adversely impact our results of operations in the future in case inflation accelerates. See Item 3. Key Information Risk Factors Risks Relating to Our Financial Condition and Financial Reporting Inflation could increase our costs and decrease operating margins.

Critical Accounting Policies and Estimates

The preparation of our consolidated financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at year-end and the reported amount of revenues and expenses during the year. Management regularly evaluates these estimates. Management estimates are based on historical experience and various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Accordingly, actual results may differ materially from current expectations under different assumptions or conditions.

We believe that the following are the more significant policies, judgments and estimates used in the preparation of the financial statements.

Accounting for business combinations

During the past years, we have completed several significant business combination transactions. In the future, we may continue to grow our business through business combinations. We accounted for all combinations using the purchase method of accounting.

The accounting for business combinations under the purchase method is complicated and involves the use of significant judgment. Under the purchase method of accounting, a business combination is accounted for at a purchase price based upon the fair value of the consideration given, whether it is in the form of cash, assets, stock, the assumption of liabilities, or the contingent consideration. The assets acquired, liabilities assumed and any non-controlling interest in the acquiree at the acquisition date are measured at their fair values. Determining the fair values of the assets and liabilities acquired involves the use of judgment, since the majority of the assets and liabilities acquired do not have fair values that are readily determinable. Different techniques may be used to determine fair values, including market prices, where available, appraisals, comparisons to transactions for similar assets and liabilities and present value of estimated future cash flows, among others. Since these estimates involve the use of significant judgment, they can change as new information becomes available.

The most difficult estimations of individual fair values are those involving property, plant and equipment, mineral licenses and identifiable intangible assets. We use all available information to make these fair value determinations

and, for major business acquisitions, typically engage an outside appraisal firm to assist in the fair value determination of the acquired long-lived assets. We have, if necessary, up to one year after the acquisition closing date to finish these fair value determinations and finalize the purchase price allocation.

Table of Contents***Goodwill***

Goodwill represents the excess of the consideration transferred plus the fair value of any non-controlling interests in the acquiree at the acquisition date over the fair values of the identifiable net assets acquired. For the acquisitions with the effective date before January 1, 2009, the excess of the fair value of net assets acquired over cost, called negative goodwill, was allocated to the acquired non-current assets (except for deferred taxes, if any) until they were reduced to zero. Since January 1, 2009, the excess of the fair value of net assets acquired over the fair value of consideration transferred, plus the fair value of any non-controlling interest should be recognized as a gain in consolidated statements of income and comprehensive income on the acquisition date. ASC 350 prohibits the amortization of goodwill. Instead, goodwill is tested for impairment at least annually and on an interim basis when an event occurs or circumstances change between annual tests that would more likely than not result in impairment.

For the investees accounted for under the equity method, the excess of cost of the stock of those companies over our share of fair value of their net assets as of the acquisition date is treated as goodwill embedded in the investment account. Goodwill arising from equity method investments is not amortized, but tested for impairment at least annually and on an interim basis when an event occurs or circumstances change between annual tests that would more likely than not result in impairment.

As of December 31, 2010 and 2009, we reported goodwill of \$988.8 million and \$894.4 million, respectively. Based on the results of the impairment analysis of goodwill performed by us as of December 31, 2010, no impairment loss was recognized.

Non-controlling interest

Non-controlling interests in the net assets and net results of consolidated subsidiaries are shown under the Non-controlling interests and Net income attributable to non-controlling interests lines in the accompanying consolidated balance sheets and statements of income and comprehensive (loss) income, respectively. Losses attributable to our group and the non-controlling interests in a subsidiary may exceed their interests in the subsidiary's equity. The excess, and any further losses attributable to our group and the non-controlling interests, are to be attributed to those interests. That is, the non-controlling interests continue to be attributed to their share of losses even if that attribution results in a deficit non-controlling interest balance.

Prior to our adoption of FASB ASC 810, Consolidation (ASC 810) on January 1, 2009, we recognized 100% of losses for majority-owned subsidiaries that incurred losses, after first reducing the related non-controlling interests balances to zero, unless minority shareholders were committed to fund the losses. Further, when a majority-owned subsidiary becomes profitable, we recognize 100% of profits until such time as the excess losses previously recorded have been recovered. Thereafter, we recognize profits in accordance with the underlying ownership percentage.

Principles of variable interest entity consolidation

Effective January 1, 2010, the group adopted required changes to consolidation guidance for variable interest entities that require an enterprise to perform an analysis to determine whether the enterprise's variable interest or interests give it a controlling financial interest in a variable interest entity. These changes to the consolidation guidance defined the primary beneficiary of a variable interest entity as the enterprise that has (1) the power to direct the activities of a variable interest entity that most significantly impact the entity's economic performance and (2) the obligation to absorb losses of the entity that could potentially be significant to the variable interest entity, or the right to receive benefits from the entity that could potentially be significant to the variable interest entity. In addition, the required changes provide guidance on shared power and joint venture relationships, remove the scope exemption for qualified special purpose entities, revise the definition of a variable interest entity, and require additional disclosures.

The adoption of the above mentioned changes to consolidation guidance did not have impact on the consolidated financial statements of the group. The group does not have significant consolidated variable interest entities.

Table of Contents

Reporting and functional currencies

We have determined our reporting currency to be the U.S. dollar. The functional currencies for our Russian, Romanian, Kazakh, German, Lithuanian, Bulgarian, Ukrainian, Czech, Serbian, Turkish and Hungarian subsidiaries are the Russian ruble, the Romanian lei, the Kazakh tenge, Euro, the Lithuanian lit, the Bulgarian lev, the Ukrainian hryvnia, the Czech koruna, the Serbian dinar, the Turkish lira and the Hungarian forint, respectively. The U.S. dollar is the functional currency of our other international operations.

The translation adjustments resulting from the process of translating financial statements from the functional currency into the reporting currency are included in determining other comprehensive income. Our foreign subsidiaries translate their functional currencies into U.S. dollars using the current rate method as prescribed by FASB ASC 830, Foreign Currency Matters, (ASC 830) for all periods presented.

Management estimates

The preparation of the consolidated financial statements requires management to make estimates and assumptions that affect the reported carrying amounts of assets and liabilities, and disclosure of contingent assets and liabilities as of the date of the financial statements, and the amounts of revenues and expenses recognized during the reporting period. Actual results could differ from those estimates.

Property, plant and equipment

Property, plant and equipment is recorded at cost less accumulated depletion and depreciation. Property, plant and equipment acquired in business combinations are initially recorded at their respective fair values as determined by independent appraisers in accordance with the requirements of ASC 805. In the reporting periods ending before January 1, 2009, for the purpose of determining the carrying amounts of the property, plant and equipment pertaining to interests of non-controlling shareholders in business combinations when less than a 100% interest is acquired, we used appraised fair values as of the acquisition dates in the absence of reliable and accurate historical cost bases for property, plant and equipment, which represented a departure from the U.S. GAAP effective before January 1, 2009. The portion of non-controlling interest not related to property, plant and equipment was determined based on the historical cost of those assets and liabilities.

Mineral licenses

The mineral licenses are recorded at their fair values at the date of acquisition, based on the appraised fair value. Fair value of the mineral licenses acquired prior to August 22, 2004 (the date of change in the Russian Subsoil Law that makes license extensions through the end of the estimated proven and probable reserve period reasonably assured), is based in part on independent mining engineer appraisals for proven and probable reserves during the license term. Such mineral licenses are amortized using the units-of-production method over the shorter of the license term or the estimated proven and probable reserve depletion period.

Fair value of the mineral licenses acquired after August 22, 2004 is based in part on independent mining engineer appraisals of the estimated proven and probable reserve through the estimated end of the depletion period. Such mineral licenses are amortized using the units-of-production method through the end of the estimated proven and probable reserve depletion period.

In order to calculate proven and probable reserves, estimates and assumptions are used about a range of geological, technical and economic factors, including but not limited to quantities, grades, production techniques, recovery rates, production costs, transport costs, commodity demand, commodity prices and exchange rates. There are numerous

uncertainties inherent in estimating proven and probable reserves, and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the forecast prices of commodities, exchange rates, production costs or recovery rates may change the economic status of reserves and may, ultimately, result in the reserves being restated.

In 2008, the group established a policy, according to which the group would engage independent mining engineers to review its proven and probable reserves at least every three years unless circumstances or additional factors warrant an additional analysis. This policy does not change the group's approach to the

Table of Contents

measurement of proven and probable reserves as of their acquisition dates as part of business combinations that continue to involve independent mining engineers. The group engaged independent mining engineers to estimate the group's proven and probable reserves as of December 31, 2010, but not as of December 31, 2009, except for those related to newly acquired subsidiaries. The group's proven and probable reserve estimates as of that date were made by internal mining engineers and the majority of the assumptions underlying these estimates had been previously reviewed and verified by independent mining engineers.

Our management evaluates our estimates and assumptions on an ongoing basis; however, actual amounts could differ from those based on such estimates and assumptions. As of December 31, 2010 and 2009, the carrying amount of our mineral licenses amounted to \$4,971.7 million and \$5,133.1 million, respectively.

Intangible assets

Intangible assets with determinable useful lives are amortized using the straight-line method over their estimated period of benefit, ranging from two to sixteen years. Indefinite-lived intangibles are evaluated annually for impairment or when indicators exist indicating such assets may be impaired. Such evaluation assumes determination of fair value of intangible assets based on a valuation model that incorporates expected future cash flows and profitability projections.

Retirement benefit obligations

Our Russian subsidiaries are legally obligated to make defined contributions to the Russian Pension Fund, managed by the Russian Federation Social Security (a defined contribution plan financed on a pay-as-you-go basis). Our contributions to the Russian Pension Fund relating to defined contribution plans are charged to income in the year to which they relate.

In 2009 contributions to the Russian Pension Fund, together with other social contributions, were included within a unified social tax (UST), which was calculated by the application of a regressive rate from 26% (applied to the portion of the annual gross salary below 280,000 rubles) to 104,800 rubles plus 2% (applied to the portion of annual gross salary exceeding 600,000 rubles) to the annual gross remuneration of each employee. UST was allocated to three social funds (including the Russian Pension Fund), where the rate of contributions to the Russian Pension Fund varies from 14% (applied to the portion of the annual gross salary below 280,000 rubles) to 56,800 rubles (applied to the portion of annual gross salary exceeding 600,000 rubles). Contributions to the Russian Pension Fund for the years ended December 31, 2010, 2009 and 2008 were \$134.6 million, \$75.2 million and \$102.8 million, respectively.

In 2010, some changes were introduced to the Russian tax legislation. The UST was replaced by direct insurance contributions to the national extra-budgetary funds. In 2010 the total rates of social contributions were 26%: contributions to the Russian Pension Fund amount to 20% of the annual gross salary of each employee, contributions to the Fund of obligatory medical insurance amount to 3.1% and contributions to the Social Insurance Fund amount to 2.9%. These rates apply to the part of the annual gross salary below 415,000 rubles for each employee. Annual gross salaries exceeding that amount are non-taxable.

In 2011, the contribution to the Russian Pension Fund and Fund of obligatory medical insurance will be further increased to 26% and 5.1%, respectively. These tariffs will apply to the part of annual gross salary below 463,000 rubles. Annual gross salaries exceeding that amount are non-taxable.

In addition, we have a number of defined benefit pension plans that cover the majority of production employees. Benefits under these plans are primarily based upon years of service and average earnings. We account for the cost of defined benefit plans using the projected unit credit method. Under this method, the cost of providing pensions is

charged to the statement of income and comprehensive income, so as to attribute the total pension cost over the service lives of employees in accordance with the benefit formula of the plan. Our obligation in respect of defined retirement benefit plans is calculated separately for each defined benefit plan by discounting the amounts of future benefits that employees have already earned through their service in the current and prior periods. The discount rate applied represents the yield at year end on highly rated long-term bonds.

Table of Contents

Our U.S. subsidiaries adopted FASB ASC 715, Compensation-Retirement Benefits (**ASC 715**), and use the Projected Unit Credit method of accounting for post-retirement health care benefits, which is intended to match revenues with expenses and attributes an equal amount of an employee's projected benefit to each year from the date of plan entry to the date that the employee is first eligible to retire with full benefits. The actuarially estimated accumulated post-retirement benefit obligation (**APBO**) was recognized at the acquisition of the U.S. subsidiaries on May 7, 2009. The APBO represents the present value of the estimated future benefits payable to current retirees and a pro rata portion of estimated benefits payable to active employees upon retirement disclosed in note 16 of our consolidated financial statements.

Pension and Post-Retirement Benefit obligations and the results of sensitivity analysis of Pension and Post-Retirement Benefit obligations as of December 31, 2010 are disclosed in the note 16 to our consolidated financial statements.

Revenue recognition

Revenue is recognized on an accrual basis when earned and realizable, which generally occurs when products are delivered to customers. In some instances, while title of ownership has been transferred, the revenue recognition criteria are not met as the selling price is subject to adjustment based upon the market prices. Accordingly, in those instances, revenue and the related cost of goods sold are recorded as deferred revenues and deferred cost of inventory in transit in the consolidated balance sheets and are not recognized in the consolidated income statement until the price becomes fixed and determinable, which typically occurs when the price is settled with the end-customer. In certain foreign jurisdictions (e.g. Switzerland), the group generally retains title to goods sold to end-customers solely to ensure the collectability of its accounts receivable. In such instances, all other sales recognition criteria are met, which allows the group to recognize sales revenue in conformity with underlying sales contracts.

Revenue is recognized net of applicable provisions for discounts and allowances and associated sales taxes (VAT) and export duties.

Revenues are inflows from sales of goods that constitute ongoing major operations of the group and are reported as such in the consolidated statement of comprehensive income. Inflows from incidental and peripheral operations are considered gains and are included, net of related costs, in other income in the consolidated statement of comprehensive income.

The group is involved in re-selling goods and services produced or rendered by other entities. Revenues are reported based on the gross amount billed to the customer when the group has earned revenue as a principal from the sale of goods or services, or the net amount retained (that is, the amount billed to the customer reduced by the amount billed by the supplier) when the group has earned a commission or fee as an agent. The group evaluates the relevant facts and circumstances and takes into consideration the following factors in determining whether to recognize revenue on a gross basis: (1) the group is the primary obligor in the arrangement; (2) the group has general inventory risk including customer returns; (3) the group has latitude in establishing price; (4) the group changes the product or performs part of the service; (5) the group has discretion in supplier selection; (6) the group is involved in the determination of product or service specifications; (7) the group has physical loss inventory risk; (8) the group has credit risk. Otherwise, revenues are reported net when the group performs as an agent or a broker without assuming the risks and rewards of ownership of goods. The evaluations of these factors, which at times can be contradictory, are subject to significant judgment and subjectivity. This accounting policy of reporting revenue gross as a principal versus net as an agent has no effect on gross profit, income from continuing operations, before taxes, or net income.

In the situation when the group act as a supplier and as a buyer with the same counterparty, the group analyzes the respective purchase and sales agreements to identify whether these transactions were concluded in contemplation with each other and, therefore, should be combined for accounting purposes deferring the revenue recognition to the point

when the earnings process has culminated.

Table of Contents

In the power segment (see note 23), revenue is recognized based on unit of power measure (kilowatts) delivered to customers, since at that point revenue recognition criteria are met. The billings are usually done on a monthly basis, several days after each month end.

We categorize revenues as follows:

domestic;

Russia: sales of Russian production within Russia;

other domestic: sales of non-Russian production within the country of production; and

export: sales of production outside of country of production.

Property, plant and equipment

Capitalized production costs for internally developed assets include material, direct labor costs, and allocable material and manufacturing overhead costs. When construction activities are performed over an extended period, interest costs incurred during construction are capitalized. Construction-in-progress and equipment held for installation are not depreciated until the constructed or installed asset is substantially ready for its intended use.

The costs of planned major maintenance activities are recorded as the costs are actually incurred and are not accrued in advance of the planned maintenance. Costs for activities that lead to the prolongation of useful life or to expanded future use capabilities of an asset are capitalized. Maintenance and repair costs are expensed as incurred.

Other than for mineral licenses and other long-lived mining assets and processing plant and equipment, we record depreciation primarily using the straight-line method on a pro rata basis.

The following useful lives are used as a basis for recording depreciation:

Category of Asset	Useful Economic Lives Estimates, Years
Buildings	20-45
Land improvements	20-50
Operating machinery and equipment	7-30
Transportation equipment and vehicles	4-15
Tools, furniture, fixtures and other	4-8

The remaining useful economic lives of our property, plant and equipment are revised on an annual basis.

Mining assets and processing plant and equipment

Mineral exploration costs incurred prior to establishing proven and probable reserves for a given property are expensed as incurred. Proven and probable reserves are established based on independent feasibility studies and appraisals performed by mining engineers. No exploration costs were capitalized prior to the point when proven and probable reserves are established. Reserves are defined as that part of a mineral deposit, which could be economically

and legally extracted or produced at the time of the reserve determination. Proven reserves are defined as reserves, for which (a) quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes (grade and/or quality are computed from the results of detailed sampling) and (b) the sites for inspection, sampling and measurement are spaced so closely and the geologic character is so well defined that size, shape, depth and mineral content of reserves are well-established. Probable reserves are defined as reserves, for which quantity and grade and/or quality are computed from information similar to that used for proven reserves, but the sites for inspection, sampling, and measurement are farther apart or are otherwise less adequately spaced. Accordingly, the degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation.

Table of Contents

Development costs are capitalized beginning after proven and probable reserves are established. Costs of developing new underground mines are capitalized. Underground development costs, which are costs incurred to make the mineral physically accessible, include costs to prepare property for shafts, driving main entries for ventilation, haulage, personnel, construction of airshafts, roof protection and other facilities. At our surface mines, these costs include costs to further delineate the mineral deposits and initially expose the mineral deposits and construction costs for entry roads, and drilling. Additionally, interest expense allocable to the cost of developing mining properties and to constructing new facilities is capitalized until assets are ready for their intended use.

Expenditures for improvements are capitalized, while costs related to maintenance (turnarounds) are expensed as incurred. In addition, costs incurred to maintain current production capacity at a mine and exploration expenditures are charged to expenses as incurred. Stripping costs incurred during the production phase of a mine are expensed as incurred.

Mining assets and processing plant and equipment are those assets, including construction-in-progress, which are intended to be used only for the needs of a certain mine or field, and upon full extraction after exhausting of the reserves of such mine or the field, these assets cannot be further used for any other purpose without a capital reconstruction. When mining assets and processing plant and equipment are placed in production, the applicable capitalized costs, including mine development costs, are depleted using the unit-of-production method at the ratio of tonnes of mineral mined or processed to the estimated proven and probable mineral reserves that are expected to be mined during the license term for mining assets related to the mineral licenses acquired prior to August 22, 2004 (refer to note 2(k) of our consolidated financial statements), or the estimated lives of the mines for mining assets related to the mineral licenses acquired after that date.

A decision to abandon, reduce or expand activity on a specific mine is based upon many factors, including general and specific assessments of mineral reserves, anticipated future mineral prices, anticipated costs of developing and operating a producing mine, the expiration date of mineral licenses, and the likelihood that we will continue exploration of the mine. Based on the results at the conclusion of each phase of an exploration program, properties that are not economically feasible for production are re-evaluated to determine if future exploration is warranted and that carrying values are appropriate. The ultimate recovery of these costs depends on the discovery and development of economic ore reserves or the sale of the companies owning such mineral rights.

Long-lived assets impairment, including definite-lived intangibles and goodwill

We follow the requirements of ASC 360 Property, Plant and Equipment, which addresses financial accounting and reporting for the impairment and disposal of long-lived assets, and ASC 350, Intangibles-Goodwill and Other, with respect to impairment of goodwill and intangibles. We review the carrying value of our long-lived assets, including property, plant and equipment, investments, goodwill, licenses to use mineral reserves (inclusive of capitalized costs related to asset retirement obligations), and intangible assets for impairment whenever events or changes in circumstances indicate that the carrying amount of such assets may not be fully recoverable as prescribed by ASC 360 and ASC 350. Recoverability of long-lived assets, excluding goodwill, is assessed by a comparison of the carrying amount of the asset (or the group of assets, including the asset in question, that represents the lowest level of separately-identifiable cash flows) to the total estimated undiscounted cash flows expected to be generated by the asset or group of assets. If the estimated future net undiscounted cash flows are less than the carrying amount of the asset or group of assets, the asset or group of assets is considered impaired and expense is recognized equal to the amount required to reduce the carrying amount of the asset or group of assets to their fair value. Fair value is determined by discounting the cash flows expected to be generated by the asset when the quoted market prices are not available for the long-lived assets. For assets and groups of assets relating to and including the licenses to use mineral reserves, future cash flows include estimates of recoverable minerals, mineral prices (considering current and historical prices, price trends and other related factors), production levels, capital and reclamation costs, all based on

the life of mine models prepared by our internal engineers. Recoverable minerals refer to the estimated amount that will be obtained from proven and probable reserves. Estimated future cash flows are

Table of Contents

based on our assumptions and are subject to risk and uncertainty that are considered in the discount rate applied in the impairment testing.

ASC 350 prohibits the amortization of goodwill. Instead, goodwill is tested for impairment at least annually and on an interim basis when an event occurs that could potentially lead to the impairment, i.e., a significant decline in selling prices, production volumes or operating margins. Under ASC 350, goodwill is assessed for impairment by using the fair value based method. We determine fair value by utilizing discounted cash flows. The impairment test required by ASC 350 for goodwill includes a two-step approach. Under the first step, companies must compare the fair value of a reporting unit to its carrying value. A reporting unit is the level, at which goodwill impairment is measured and is defined as an operating segment or one level below it if certain conditions are met. If the fair value of the reporting unit is less than its carrying value, goodwill is impaired.

Under step two, the amount of goodwill impairment is measured by the amount that the reporting unit's goodwill carrying value exceeds the implied fair value of goodwill. The implied fair value of goodwill can only be determined by deducting the fair value of all tangible and intangible net assets (including unrecognized intangible assets) of the reporting unit from the fair value of the reporting unit (as determined in the first step). In this step, the fair value of the reporting unit is allocated to all of the reporting unit's assets and liabilities (a hypothetical purchase price allocation).

If goodwill and another asset (or asset group) of a reporting unit are tested for impairment at the same time, the other asset (or asset group) shall be tested for impairment before goodwill. If the asset group was impaired, the impairment loss would be recognized prior to goodwill being tested for impairment.

When performing impairment tests, we use assumptions that include estimates regarding the discount rates, growth rates and expected changes in selling prices, sales volumes and operating costs, as well as capital expenditures and working capital requirements during the forecasted period. We estimate discount rates using after-tax rates that reflect current market rates for investments of similar risk. The growth rates are based on our growth forecasts, which are largely in line with industry trends. Changes in selling prices and direct costs are based on historical experience and expectations of future changes in the market. While impairment of long-lived assets does not affect reported cash flows, it does result in a non-cash charge in the consolidated statements of income and comprehensive income, which could have a material adverse effect on our results of operations or financial position.

We performed an impairment analysis of long-lived assets, including definite-lived intangibles and goodwill at all our major subsidiaries as of December 31, 2010. Cash flow forecasts used in the test were based on the assumptions as of December 31, 2010. The forecasted period for our non-mining subsidiaries was assumed to be seven years to reach stabilized cash flows, and the value beyond the forecasted period was based on a terminal growth rate of 2.5%. For our mining subsidiaries the forecasted period was based on the remaining life of the mines. Cash flow projections were prepared using assumptions that comparable market participants would use.

Forecasted inflation rates for the period 2010-2017, which were used in cash flow projections, were as follows:

Region	2011	2012	2013	2014	2015	2016	2017
Russia	9%	8%	7%	6%	6%	6%	6%
United States	3%	3%	3%	2%	2%	2%	2%
Europe	2%	2%	2%	2%	2%	2%	2%
Romania	4%	4%	4%	4%	4%	4%	4%
Bulgaria	4%	4%	4%	4%	4%	4%	4%
Kazakhstan	9%	8%	7%	6%	6%	6%	6%

Discount rates were estimated in nominal terms on the weighted average cost of capital basis. To discount cash flow projections we used similar discount rates for Russia, Eastern Europe and Kazakhstan, assuming that

Table of Contents

this approach reflected market rates for investments of a similar risk as of December 31, 2010 in these regions. These rates, estimated for each year for the forecasted period, are as follows:

	2011	2012	2013	2014	2015	2016	2017
Discount rate	12.68%	12.27%	11.79%	11.38%	10.97%	10.55%	10.14%

Based on the results of the impairment analysis of long-lived assets, including our impairment analysis of definite-lived intangibles and goodwill performed for all major subsidiaries as of December 31, 2010, no impairment loss was recognized.

Based on the sensitivity analysis carried out as of December 31, 2010, the following minimum changes in key assumptions used in the goodwill impairment test would trigger the impairment of goodwill at some reporting units (the actual impairment loss that we would need to recognize under these hypotheses would depend on the appraisal of the fair values of the reporting unit's assets, which has not been conducted):

- a 1.6% point decrease in future planned revenues;
- a 0.6% point increase in discount rates for each year within the forecasted period;
- a 1% point decrease in cash flows growth rate after the forecasted period.

We believe that the values assigned to key assumptions and estimates represent the most realistic assessment of future trends.

Finance lease

The cost of equipment acquired under the capital (finance) lease contracts is measured at the lower of its fair value or the present value of the minimum lease payments, and reflected in the balance sheet at the measured amount less accumulated depreciation. The cost of the equipment is subject to an annual impairment review as described in note 2(n) to our consolidated financial statements. Capital lease liabilities are divided into long-term and current portions based on the agreed payment schedule and discounted using the lessor's implicit interest rate. Depreciation of assets acquired under the capital (finance) lease is included into depreciation charge for the period.

Accounts receivable

Accounts receivable are stated at net realizable value. If receivables are deemed doubtful, bad debt expense and a corresponding allowance for doubtful accounts is recorded. If receivables are deemed uncollectible, the related receivable balance is charged off. Recoveries of receivables previously charged off are recorded when received. Receivables that do not bear interest or bear below market interest rates and have an expected term of more than one year are discounted with the discount subsequently amortized to interest income over the term of the receivable. We review the valuation of accounts receivable on a regular basis. The amount of allowance for doubtful accounts is calculated based on the ageing of balances in accordance with contract terms. In addition to the allowance for specific doubtful accounts, we apply specific rates to overdue balances of its subsidiaries depending on the history of cash collections and future expectations of conditions that might impact the collectability of accounts of each individual subsidiary. Accounts receivable, which are considered non-recoverable (those aged over three years or due from bankrupt entities) are written off against provision or charged off to operating expenses (if no provision was created in previous periods). Our standard credit terms are 30 days in Russia and Western Europe, and vary from 30 to 60 days

in the U.S. We establish extended credit terms for related parties customers which may vary from 30 to 180 days. The group monitors collectability of accounts receivable including those from its related parties on an ongoing basis primarily through review of the accounts receivable aging to determine whether accounts receivable are a concern.

Cash and cash equivalents

Cash and cash equivalents comprise cash on hand and in transit, checks and deposits with banks, as well as other bank deposits with an original maturity of three months or less.

Table of Contents

Inventories

Inventories are stated at the lower of acquisition/manufacturing cost or market value. Cost is determined on a weighted average basis and includes all costs in bringing the inventory to its present location and condition. The elements of costs include direct material, labor and allocable material and manufacturing overhead.

Costs of production in processed and finished goods include the purchase costs of raw materials and conversion costs such as direct labor and allocation of fixed and variable production overheads. Raw materials are valued at a purchase cost inclusive of freight and other shipping costs.

Coal, nickel and iron ore inventory costs include direct labor, supplies, depreciation of equipment, depletion of mining assets and amortization of licenses to use mineral reserves, mine operating overheads and other related costs. Operating overheads are charged to expenses in the periods when the production is temporarily paused or abnormally low.

Market value is the estimated price, at which inventories can be sold in the normal course of business after allowing for the cost of completion and sale. We determine market value of inventories for a group of items of inventories with similar characteristics. The term market means current replacement cost not to exceed net realizable value (selling price less reasonable estimable costs of completion and disposal) or be less than net realizable value adjusted for a normal profit margin. Market value for each group is compared with an acquisition/manufacturing cost, and the lower of these values is used to determine the amount of the write-down of inventories, which is recorded within the cost of sales in the consolidated statements of income and comprehensive income. When inventories are written down below cost at the close of a fiscal year, such reduced amount is considered the cost basis for subsequent purposes.

As of December 31, 2010 and 2009, the write-down of inventories to their net realizable value was \$52.8 million and \$70.7 million, respectively. The most significant decrease in the write-down of inventories is attributable to the steel segment in the amount of \$16.0 million. It is caused by the fact that during the year ended December 31, 2010 we mostly sold inventories that had been previously written down to the net realizable value.

Income taxes

Provision is made in the financial statements for taxation of profits in accordance with applicable legislation currently in force in individual jurisdictions. We account for income taxes under the liability method in accordance with ASC 740, *Income Taxes* (formerly SFAS No. 109, *Accounting for Income Taxes*) and related interpretations. Under the liability method, deferred income taxes reflect the future tax consequences of temporary differences between the tax and financial statement bases of assets and liabilities and are measured using enacted tax rates to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in the tax rates is recognized as income in the period that includes the enactment date. A valuation allowance is provided when it is more likely than not that some or all of the deferred tax assets will not be realized in the future. These evaluations are based on the expectations of future taxable income and reversals of the various taxable temporary differences.

ASC 740 prescribes the minimum recognition threshold a tax position must meet before being recognized in the financial statements and provides guidance on derecognition, measurement, classification, interest and penalties, accounting in interim periods, disclosure and transition. Unrecognized income tax benefits of \$4.3 million, including interest and penalties of \$0.7 million, as of December 31, 2010, and \$17.2 million, including interest and penalties of \$7.9 million, as of December 31, 2009, were recognized by us in the accompanying consolidated balance sheets.

Taxes represent our provision for profit tax. During 2008, income tax was calculated at 24% of taxable profit in Russia, at 10.5% in Switzerland, at 16% in Romania, at 15% in Lithuania, at 30% in Kazakhstan, and at 40.5% in the United States. Our subsidiaries incorporated in Liechtenstein and the British Virgin Islands are exempt from profit tax. In November 2008, the tax legislation of Russia was amended to decrease Russian statutory income tax rate from 24% to 20% starting from January 1, 2009. Therefore, during 2009-2010,

Table of Contents

income tax was calculated at 20% of taxable profit in Russia. In addition, in December 2008 and November 2009, the tax legislation of Kazakhstan was amended to decrease the statutory income tax rate from 30% in 2008 to 20% in 2009-2012, 17.5% in 2013, 15% in 2014 and thereafter. However, in 2010, new amendments in the tax legislation of Kazakhstan resulted in an increase in the statutory tax rate back to 20% for 2013 and thereafter. The changes in income tax rates are effective from January 1 in each of the respective years.

Litigation, claims and assessments

We are subject to various lawsuits, claims and proceedings related to matters incidental to our business. Accruals of probable cash outflows have been made based on an assessment of a combination of litigation and settlement strategies. It is possible that results of operations in any future period could be materially affected by changes in assumptions or by the effectiveness of these strategies.

We record liabilities for potential tax deficiencies. These liabilities are based on management's judgment of the risk of loss. In the event that we were to determine that tax-related items would not be considered deficiencies or that items previously not considered to be potential deficiencies could be considered as potential tax deficiencies (as a result of an audit, tax ruling or other positions or authority), an adjustment to the liability would be recorded through income in the period such determination was made. See Item 8. Financial Information - Litigation for a description of various contingencies.

Asset retirement obligations

We have numerous asset retirement obligations associated with our core business activities. We are required to perform these obligations under law or contract once an asset is permanently taken out of service. Most of these obligations are not expected to be paid until many years into the future and will be funded from general resources at the time of removal. Our asset retirement obligations primarily relate to mining and steel production facilities with related landfills and dump areas and mines. Our estimates of these obligations are based on current regulatory or license requirements, as well as forecasted dismantling and other related costs. Asset retirement obligations are calculated in accordance with the provisions of the ASC 410, Asset Retirement and Environmental Obligations (ASC 410).

In order to calculate the amount of asset retirement obligations, the expected cash flows are discounted using an estimate of the credit-adjusted risk-free rate as required by ASC 410. The credit-adjusted risk-free rate is calculated as a weighted average of risk-free interest rates for Russian Federation bonds with maturity dates that coincide with the expected timing of when the asset retirement activities will be performed, adjusted for the effect of our credit standing. For our U.S. subsidiaries, the credit-adjusted risk-free rate is calculated as a weighted average of risk-free interest rates for U.S. treasury bonds with maturity dates that coincide with the expected timing of when the asset retirement activities will be performed, adjusted for the effect of our credit standing.

Shipping and handling costs

We classify all amounts billed to customers in a sale transaction and related to shipping and handling as part of sales revenue and all related shipping and handling costs as selling and distribution expenses. These costs totaled \$918.2 million, \$689.8 million and \$842.5 million for the years ended December 31, 2010, 2009 and 2008, respectively.

Comprehensive income

FASB ASC 220, Comprehensive Income (**ASC 220**), requires the reporting of comprehensive income in addition to net income. Accumulated other comprehensive income includes foreign currency translation adjustments, unrealized holding gains and losses on available-for-sale securities and on derivative financial instruments, as well as pension liabilities not recognized as net periodic pension cost. For the years ended December 31, 2010, 2009 and 2008, in addition to net income, total comprehensive income included the effect of translation of the financial statements denominated in currencies other than the reporting currency (in accordance with ASC 830), changes in the carrying values of available-for-sale securities, and change in

Table of Contents

pension benefit obligation subsequent to the adoption of the ASC 715. In accordance with ASC 715, we recognize actuarial gains and losses, prior service costs and credits and transition assets or obligations (the full surplus or deficit in their plans) in the balance sheet. As of December 31, 2010, and 2009, the amount of comprehensive income included the effect of curtailment and actuarial gains and losses. Accumulated other comprehensive (loss) income is comprised of the following components:

	December 31, 2010	December 31, 2009
	(In millions of U.S. dollars)	
Cumulative currency translation adjustment	(239.8)	(215.8)
Unrealized losses on available-for-sale securities	(0.9)	(5.8)
Pension adjustments	39.7	49.2
Total accumulated other comprehensive (loss) income	(201.0)	(172.4)

Stock-based compensation

We apply the fair-value method of accounting for employee stock-compensation costs as outlined in FASB ASC 718, Compensation Stock Compensation (**ASC 718**). During the years ended December 31, 2010, 2009 and 2008, we did not enter in any employee stock-compensation arrangements.

Segment reporting

According to FASB ASC 280, Segment Reporting (**ASC 280**), segment reporting follows our internal organizational and reporting structure. Our operations are presented in four business segments as follows:

Mining segment, comprising production and sales of coal (metallurgical and steam), iron ore and coke, which supplies raw materials to the steel, ferroalloys and power segments and also sells substantial amounts of raw materials to third parties;

Steel segment, comprising production and sales of semi-finished steel products, carbon and specialty long products, carbon and stainless flat products, value-added downstream metal products, including forgings, stampings and wire products;

Ferroalloy segment, comprising production and sales of ferronickel, ferrochrome and ferrosilicon, which supplies raw materials to the steel segment and also sells substantial amounts of raw materials to third parties; and

Power segment, comprising generation and sales of electricity and heat power, which supplies electricity, gas and heat power to the mining, steel and ferroalloys segments.

Financial instruments

The carrying amount of our financial instruments, which include cash equivalents, marketable securities, non-marketable debt securities, cost method investments, accounts receivable and accounts payable, and short-term borrowings approximates their fair value as of December 31, 2010 and 2009. For long-term borrowings, the difference

between fair value and carrying value is shown in note 14 to our consolidated financial accounts. We have determined, using available market information and appropriate valuation methodologies, such as discounted cash flows, the estimated fair values of financial instruments. Since different entities are located and operate in different regions of Russia and elsewhere with different business and financial market characteristics, there are generally very limited or no comparable market values available to assess the fair value of our debt and other financial instruments. The cost method investments are shares of Russian companies that are not publicly traded and their market value is not available. It is not practicable for us to estimate the fair value of these investments, for which a quoted market price is not available because it has not yet obtained or developed the valuation model necessary to make the estimate, and the cost of obtaining an independent valuation would be excessive considering the materiality of our instruments. Therefore, such investments are recorded at cost.

Table of Contents***Guarantees***

In accordance with FASB ASC 460, *Guarantees* (**ASC 460**), the fair value of a guarantee is determined and recorded as a liability at the time when the guarantee is issued. The initial guarantee amount is subsequently re-measured to reflect the changes in the underlying liability. The expense or re-measurement adjustments are included in the related line items of the consolidated statements of income and comprehensive (loss) income, based on the nature of the guarantee. When the likelihood of performing on a guarantee becomes probable, a liability is accrued, provided it is reasonably determinable on the basis of the facts and circumstances at that time.

Accounting for contingencies

Certain conditions may exist as of the date of these consolidated financial statements, which may further result in a loss to us, but which will only be resolved when one or more future events occur or fail to occur. Our management makes an assessment of such contingent liabilities, which is based on assumptions and is a matter of opinion. In assessing loss contingencies relating to legal or tax proceedings that involve our or unasserted claims that may result in such proceedings, we, after consultation with legal or tax advisors, evaluate the perceived merits of any legal or tax proceedings or unasserted claims as well as the perceived merits of the amount of relief sought or expected to be sought therein.

If the assessment of a contingency indicates that it is probable that a loss will be incurred and the amount of the liability can be estimated, then the estimated liability is accrued in our consolidated financial statements. If the assessment indicates that a potentially material loss contingency is not probable, but is reasonably possible, or is probable but cannot be estimated, then the nature of the contingent liability, together with an estimate of the range of possible loss if determinable and material, would be disclosed.

Loss contingencies considered remote are generally not disclosed unless they involve guarantees, in which case the nature of the guarantee would be disclosed. However, in some instances in which disclosure is not otherwise required, we may disclose contingent liabilities or other uncertainties of an unusual nature which, in the judgment of management after consultation with its legal or tax counsel, may be of interest to shareholders or others.

Derivative instruments and hedging activities

We recognize our derivative instruments as either assets or liabilities at fair value in accordance with FASB ASC 815, *Derivatives and Hedging* (**ASC 815**). The accounting for changes in the fair value of a derivative instrument depends on whether it has been designated and qualifies as an accounting hedge and further, on the type of hedging relationship. For the years ended December 31, 2010, 2009 and 2008, we did not have any derivatives designated as hedging instruments. Therefore, any gain or loss on a derivative instrument we hold is recognized currently in income. There were no significant gains or losses related to the change in the fair value of derivative instruments included in the net foreign exchange gain (loss) in the accompanying consolidated statements of income and comprehensive (loss) income for each of the three years in the period ended December 31, 2010. There were no foreign currency forward and options contracts outstanding as of December 31, 2010 and 2009.

Investments

We recognize all our debt and equity investments in accordance with FASB ASC 320, *Investments - Debt and Equity Securities* (**ASC 320**). At acquisition, we classify debt and equity securities into one of three categories: held-to-maturity, available-for-sale or trading. At each reporting date we reassess appropriateness of the classification.

Held-to-maturity securities

Investments in debt securities that we have both the ability and the intent to hold to maturity are classified as held-to-maturity and measured at amortized cost in the consolidated financial statements.

Table of Contents

Trading securities

Investments (debt or equity), which we intend to sell in the near term, and which are usually acquired as part of our established strategy to buy and sell, generating profits based on short-term price movements, are classified by us as trading securities. Changes in fair value of trading securities are recognized in earnings.

Available-for-sale securities

Investments (debt or equity), which are not classified as held-to-maturity or trading, are classified as available-for-sale. Change in their fair value is reflected in other comprehensive income.

Recoverability of equity method and other investments

Our management periodically assesses the recoverability of the group's equity method and other investments. For investments in publicly traded entities, readily available quoted market prices are an indication of the fair value of the investments. For investments in non-publicly traded entities, if an identified event or change in circumstances requires an evaluation, management assesses their fair value based on valuation techniques including discounted cash flow estimates or sales proceeds, external appraisals and market prices of similar investments as appropriate.

Our management considers the assumptions that a hypothetical market place participant would use in his analysis of discounted cash flows models and estimates of sales proceeds. If an investment is considered to be impaired and the decline in value is other than temporary, we record an impairment loss.

Recently Issued Accounting Pronouncements

Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles

Following the Codification, FASB no longer issues new standards in the form of Statements, FASB Staff Positions or Emerging Issues Task Force Abstracts. Instead, it issues Accounting Standards Updates, or ASUs, which will serve to update the Codification, provide background information about the guidance and provide the basis for conclusions on the changes to the Codification.

Improving Disclosures about Fair Value Measurements

In January 2010, the Financial Accounting Standards Board (FASB) issued the Accounting Standards Update (ASU) 2010-06, Fair Value Measurements and Disclosures (Topic 820): Improving Disclosures about Fair Value Measurements (ASU 2010-06) that amends the FASB's Accounting Standards Codification (ASC) 820, Fair Value Measurements and Disclosures (ASC 820). ASU 2010-06 requires separate disclosure of significant transfers between Level 1 and Level 2 fair value measurement inputs and a description of the reasons for the transfers. Additionally, the entity is required to present separately information on purchases, sales, issuances, and settlements on a gross basis in the reconciliation for fair value measurements using Level 3 inputs. ASU 2010-06 also clarifies that the fair value measurement disclosures should be presented for each class of assets and liabilities. A class is typically a subset of a line item in the statement of financial position. The entity also is required to provide information about the valuation techniques and inputs used to measure fair value for both recurring and nonrecurring instruments classified as either Level 2 or Level 3. ASU 2010-06 is effective for interim and annual reporting periods beginning after December 15, 2009, except for the disclosures about activity in Level 3 fair value measurements that are effective for interim and annual periods beginning after December 15, 2010. We adopted ASU 2010-06 as of January 1, 2010, except for the disclosures about activity in Level 3 fair value measurements that will be adopted as of January 1, 2011. The adoption of ASU 2010-06 did not have a material effect on our financial position, results of operations or cash flows.

Subsequent Events

In February 2010, the FASB issued ASU 2010-09, Subsequent Events (Topic 855): Amendments to Certain Recognition and Disclosure Requirements (ASU 2010-09). ASU 2010-09 amends ASC 855,

Table of Contents

Subsequent Events (ASC 855), removing the requirement for an SEC filer to disclose the date through which subsequent events have been evaluated both in issued and revised financial statements. ASU 2010-09 is effective upon issuance. The adoption of ASU 2010-09 did not have a material impact on our financial position, results of operations or cash flows.

Credit Quality of Financing Receivables and the Allowance for Credit Losses

In July 2010, FASB issued ASU 2010-20, Receivables (Topic 310): Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses (ASU 2010-20). The disclosures will provide financial statement users with additional information about the nature of credit risks inherent in entities' financing receivables, how credit risk is analyzed and assessed when determining the allowance for credit losses and the reasons for the change in the allowance for credit losses. ASU 2010-20 also introduces a new terminology; in particular, the term financial receivables . In January, 2011, FASB issued ASU 2011-01, Deferral of the Effective Date of Disclosures about Troubled Debt Restructurings in Update No. 2010-20 , where the effective date of the amendments related to the disclosures as of the end of a reporting period about troubled debt restructurings for public entities, issued in ASU 2010-20, was deferred and anticipates to be effective for interim and annual periods ending after June 15, 2011. The disclosures about activity that occurs during a reporting period are effective for interim and annual reporting periods beginning on or after December 15, 2010. The amendments in ASU 2010-20 encourage, but do not require, comparative disclosures for earlier reporting periods that ended before initial adoption. However, an entity should provide comparative disclosures for those reporting periods ending after initial adoption. We will adopt ASU 2010-20 in 2011 and do not expect that it will have a material impact on our financial position and results of operations.

Intangibles Goodwill and Other

In December 2010, the FASB issued ASU 2010-28, When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units with Zero or Negative Carrying Amounts . The amendments in this ASU modify Step 1 of the goodwill impairment test for reporting units with zero or negative carrying amounts. For those reporting units, an entity is required to perform Step 2 of the goodwill impairment if it is more likely than not that a goodwill impairment exists. In determining whether it is more likely than not that goodwill impairment exists, an entity should consider whether there are any adverse qualitative factors indicating that impairment may exist. We will initially adopt ASU 2010-28 in 2011 and does not expect ASU 2010-20 to have a material impact on the Group's financial position and results of operations.

Pro Forma Information for Business Combinations

In December 2010, the FASB issued ASU 2010-29, Disclosure of Supplementary Pro Forma Information for Business Combinations . ASU 2010-29 specifies that if a public entity presents comparative financial statements, the entity should disclose revenue and earnings of the combining business as though the business combination(s) that occurred during the current year had occurred as of the beginning of the prior annual reporting period only. The amendments in ASU 2010-29 also expand the supplemental pro forma disclosures under Topic 805 to include a description of the nature and amount of material, nonrecurring pro forma adjustments directly attributable to the business combination included in the reported pro forma revenue and earnings. We will initially adopt ASU 2010-29 for the 2011 annual reporting and do not expect it to have a material impact on our financial position and results of operations.

There were various other updates recently issued, most of which represented technical corrections to the accounting literature or application to specific industries and are not expected to have a material impact on our financial position, results of operations or cash flows.

Trend Information

Since the beginning of global financial crisis in the third quarter of 2008, world steel producers and miners effectively adjusted their production to the new level of demand. This prevented the market from experiencing a huge oversupply, and reduced the depth and the length of the fall in market prices and buying

Table of Contents

activity. Another positive factor for the industry is a steady growth of Chinese demand, which partially mitigated the fall in demand in other regions. China continues to increase its steel production and consumption at a high rate, absorbing excessive steelmaking raw materials from global markets.

We observed the signs of demand recovery in the second half of 2009 and continuing in 2010, since many miners and steelmakers worldwide have restarted their idled capacities. In 2010 we experienced improvement in steel demand on mature markets, like the United States and Europe, which were severely affected by the crisis and showed no signs of improvement during 2009. Steel demand and production recovery in 2010 was rather sharp with global figures exceeding pre-crises levels.

Demand

Mining. The demand for coking coal is dependent on the steel industry, which is directly tied to global economic cycles. The demand for internationally traded coking coal fell in 2009 due to the global recession. In 2010 demand returned to pre-crisis levels due to stable import growth from China and recovery of developed economies after the crises. Global metallurgical coal import increased by 20.6% in 2010, according to AME.

The steam coal market is driven by non-steel related factors, such as growth in electricity consumption, balance between supply and demand and seasonality. Global internationally traded steam coal demand varied insignificantly in 2009 compared to 2008, decreasing by 0.4%, according to AME. In 2010 global steam coal import increased by 4.6%, according to AME.

Demand for internationally traded iron ore rose in 2009 against 2008 due to the surge in imports from China by 5.6%, according to AME. Global import demand for iron ore in 2010 has risen 10.6% due to demand increase from developed countries, according to AME.

Steel. Russia is our single largest market for steel products. In 2008 Russian rolled steel consumption totaled to 38.4 million tonnes, according to Metal Expert. In 2009, rolled steel consumption in Russia fell by 28.9% to 17.3 million tonnes, according to Metal Expert. In 2010 Russian rolled steel consumption almost returned to pre-crisis level. It grew by 37.7% and reached 37.6 million tonnes, according to Metal Expert.

We expect that Russia's domestic steel consumption will continue to grow in 2011.

The volume of steel products exports from Russia experienced a 9.2% decline in 2010 and amounted to 27.3 million tonnes, according to Metal Expert. We believe that our Russian steel products will retain competitiveness in the markets outside Russia in 2011, due to a better position on the cost curve.

Imports of steel increased 54.6% year on year in 2010 to 5.1 million tonnes, due to increased consumption, according to Metal Expert. Imported steel comprised only 13.7% of the Russian steel market, according to Metal Expert. We expect imports will slightly increase in 2011, due to growing Russia's steel consumption. But the share of imported steel in the Russian steel market will stay relatively stable.

Ferroalloys. Demand for nickel and ferrochrome grew substantially in 2010 not only in China and other Asian countries, but also in developed regions, driven by the increase in stainless steel production. Global stainless steel production grew by 24.2% in 2010, according to CRU. Nickel supply was tight most of 2010, especially in the first half of the year. This led to the decrease in London Metal Exchange (LME) nickel stocks by 13.6% by the end of 2010, according to CRU. Ferrochrome supplies to the market in 2010 were also limited; production was insufficient in the first half of the year. In the second half of 2010 ferrochrome producers increased supplies to the market at a faster pace than consumption growth, which resulted in increased ferrochrome market stocks by the end of 2010. We expect

that stainless steel production in all regions will continue to improve in 2011, which will lead to an increase in demand for nickel and ferrochrome.

Global ferrosilicon demand grew by 7.8% in 2010, on the back of the general increase in steel production. Global steel production increased by 16.7% in 2010, according to the World Steel Association. Production grew in most regions; the largest increase in crude steel production volumes took place in Asia, the European Union and North America, according to the World Steel Association. We expect that the ferrosilicon

Table of Contents

market will see further increase in demand in 2011, since we expect continued growth in steel production in the most regions of the world.

Power. In 2010, the increase in electricity output of our Russian generating enterprises was 15%. Heat energy generated for sale increased by 13%.

In January 2010, the production of electricity by our generating enterprises increased by 4%, and heat energy by 8%, compared to January 2009.

The reduction in market demand for electricity and heat energy has resulted in the need to adjust undertakings and completion schedules with respect to power industry companies' investment programs. Currently the Russian government is analyzing the progress made on these programs, with a view to clarifying the timeline for installation of the necessary production capacity, with due regard for the economic downturn. The decisions made on this basis will form a new long-term balance of power and capacity, which in turn will determine the profitability of the power and capacity markets.

Sales

Mining. Overall, we expect sales volumes of our mining segment to grow in 2011, due to an increase in demand in the Asian markets. We expect domestic sales of our mining products to increase due to increased demand. Export sales are also expected to increase, since we are strategically diversifying our sales geography. We believe that our policy of concluding long-term contracts for coal and iron ore concentrate sales strengthens our relationship with our customers and gives us long-term presence in both the domestic and export markets.

Steel. Our steel segment sales volumes are expected to increase in 2011 due to an increase in demand for steel. During 2010, Mechel-Service, a steel sales subsidiary of Mechel Service Global in Russia, continued its program of expanding its sales network, enhancing its product portfolio and extending the range of its services and enlarging its client base. Mechel-Service has offices in 46 cities in Russia. In 2010, a line of welded reinforcing mesh production started operating at designed capacity in the Moscow region. We are planning to acquire additional units in order to increase production volumes. In total sales volumes shares of such products as cold rolled reinforcing wire, pipe rolled products, structural shapes, stainless rolled products, high-quality rolled steel products and wire products are steadily increasing. In 2010, Mechel-Service continued expansion of its own truck fleet to improve the quality of service for end users. We believe that our strategy of expanding our own distribution network of steel sales, expanding our product portfolio and developing customer services will improve our market position and will provide us with greater stability in steel sales.

Ferrous alloys. We expect sales volumes of our ferrous alloys segment, specifically ferrochrome and ferronickel, to increase in 2011. Domestic sales are expected to increase due to growth of consumption. In addition, we expect an increase in exports of our ferrous alloy products, widening our geographic market coverage and increasing sales volumes to traditional export markets.

Power. In 2011, we expect an increase in the sales of our power segment due to increased end-user demand from industrial enterprises. At the same time, consumption by small and mid-sized businesses and households, who are also customers of power and heat-supply companies, will not change significantly. We plan to expand our distribution channels, building a new customer base among small and mid-sized businesses, as well as public utilities. We also plan to optimize our production capacity through further integration of our intra-group assets. We hope that further integration of our power assets, as well as diversification of our customer portfolio, will allow us to avoid a sharp fall in power segment sales.

Inventory

Overall, our inventory increased by \$830.8 million, or 80%, to \$1,866.6 million as of December 31, 2010, from \$1,035.8 million as of December 31, 2009. The increase was mainly due to growing production volumes in 2010 compared to 2009, the year of the global downturn, and the corresponding decrease in demand and efficient usage of available inventories of stock during 2009 along with a reduction of purchase prices and the depreciation of the ruble.

Table of Contents

Costs

Mining. Within our mining segment, we expect our iron ore cash costs per tonne to increase in 2011 as a result of increasing prices of power, explosives, automotive tires and tubes for open pit equipment and land use fees, while coal cash costs per tonne should remain relatively stable in 2011 as a result of increasing operational efficiency and decreasing semi-fixed costs.

Steel. Excluding the effects of exchange rate fluctuations, our steel cash costs per tonne should remain relatively stable in 2011 as a result of maintaining production volumes and achieving cost savings, as well as efficiency and output gains arising as a result of our targeted capital investment program. Specifically, as we continue to introduce operational and technical changes at our plants allowing us to better integrate their products, we expect to be better able to control our cost increases. The increasing use of continuous casters should provide both efficiency and production increases.

Ferrous alloys. We expect electricity and natural gas expenses to increase in 2011, which will lead to an increase in the power cost component of our ferrous alloys production cost structure. At the same time, we are planning to conduct a number of activities related to the reconstruction of smelting furnaces. We believe that implementation of these activities aimed at improving technical and economic performance and reducing expenses will enable to achieve a stabilization of our ferrous alloys production costs.

Power. We expect that in 2011 the cost of the production of electricity and heat energy will increase due to an increase in the prices of key raw materials, particularly natural gas and coal, as well as some ancillary materials. However, we intend to maintain strict control over costs, which should enable us to cut expenditure by reducing the fixed-expense component of our production costs, optimizing administrative expenses and increasing productivity to satisfy increased market demand in some regions. We have given special attention to high-priority financial and operating activities, including technical refurbishment, development of existing capacities and installation of new power generation capacity at our production facilities.

The increase in sales volumes despite the potential increase in weighted average cash expenses per product unit across our segments may positively affect our financial results in 2011 in comparison with those in 2010.

Seasonality

Seasonal effects have a relatively limited impact on our results. Nonetheless, slowing of demand and, thus, a reduction in sales volumes (and a related increase in inventories) is typically evident in the first and fourth quarters of the financial year as a result of the general reduction in economic activity associated with the New Year holiday period in Russia and elsewhere. We also maintain larger stockpiles of scrap during the winter months in order to avoid potential supply disruptions due to inclement weather. We are also dependent on the Russian construction market, which also experiences slowdowns in the winter months. Both our ferrous alloys and mining (in respect of coking coal and iron ore) segments' revenues generally have the same seasonality as the steel segment since ferrous alloys, coking coal and iron ore are primarily used in the manufacture of steel and are closely linked to steel consumption. By contrast, our power segment sales volumes experience a different seasonality generally higher in the first and the fourth quarters of the year, due to increased electricity and steam consumption in the winter period. Our sales of steam coal typically increase during the second and third quarters as a result of increased steam coal purchases by utilities, including Southern Kuzbass Power Plant, in preparation for increased consumption during the winter heating season.

Consumption of combustible, lubricative and energy supplies during the winter months is generally higher than during the rest of the year. In addition, railroad carriers demand that iron ore concentrate be fully dried and coal concentrate be partially dried for transportation during the winter months, resulting in higher costs during that time.

Table of Contents**Item 6. Directors, Senior Management and Employees****Directors and Executive Officers*****Board of Directors***

Name	Year of Birth	Position
Igor V. Zyuzin ⁽⁴⁾	1960	Chairman and Director
Alexander E. Yevtushenko ⁽¹⁾⁽³⁾	1947	Director
Vladimir A. Polin	1962	Director
Valentin V. Proskurnya ⁽⁴⁾	1945	Director
Roger I. Gale ⁽¹⁾⁽²⁾⁽³⁾	1952	Director
A. David Johnson ⁽¹⁾⁽²⁾⁽⁴⁾	1937	Director
Serafim V. Kolpakov ⁽¹⁾⁽³⁾⁽⁴⁾	1933	Director
Igor S. Kozhukhovskiy ⁽¹⁾⁽⁴⁾	1956	Director
Vladimir V. Gusev ⁽¹⁾⁽²⁾⁽³⁾	1945	Director

(1) Independent Director under applicable New York Stock Exchange regulations and Russian regulations.

(2) Member of the Audit Committee of the Board of Directors.

(3) Member of the Committee on Appointments and Remuneration.

(4) Member of the Committee on Investments and Strategic Planning.

Igor V. Zyuzin has been Chairman of our Board of Directors since July 2010. He was our Chief Executive Officer from December 2006 and until July 2010 and Chairman of our Management Board from September 2007 and until July 2010. He served as the Chairman of our Board of Directors from March 2003, when Mechel was founded, until December 2006 and has been a member of our Board of Directors since that time. Mr. Zyuzin also serves as the Chairman of the Board of Directors of Southern Kuzbass Coal Company, a position he has held since May 1999, and has served as a member of the Board of Directors of Chelyabinsk Metallurgical Plant since 2001 and as a member of the Board of Directors of Yakutugol since October 2007. Mr. Zyuzin has also served as the Chairman of the Board of Directors of Mechel Mining a position he has held since May 2008. Mr. Zyuzin has over 24 years of experience in the coal mining industry and holds a degree in coal mining from Tula Polytechnic Institute. Mr. Zyuzin also has a degree in coal mining engineering economics and a doctorate in coal mining technical sciences. Mr. Zyuzin beneficially owns 66.76% of our common shares and 1.31% of the common shares of Mechel Mining.

Alexander E. Yevtushenko has been a member of our Board of Directors since June 2004. He served as the Chairman of our Board of Directors from July 2009 until July 2010. From 2001 to 2004, Mr. Yevtushenko served as First Vice President of Sokolovskaya OAO, a holding company for a group of Russian coal mining and engineering enterprises. From 1999 to 2000, he was President of the General Committee of the Inter-State Eurasian Association of Coal and Metals. From 1991 to 1999, Mr. Yevtushenko was First Deputy Fuels and Energy Minister of the Russian Federation. From 1973 to 1991, he worked in various positions, including as General Director of the Rapsadskaya Mine in the Kuzbass region, the Soviet Union's largest coal mine. Mr. Yevtushenko graduated from the Siberian Metallurgical Institute with a degree in mining engineering. He has a doctorate in engineering and is a member of the Academy of Mining Sciences of Russia. Mr. Yevtushenko is the author of more than 50 scientific publications, including Mineral

Resources of the Coal Industry of Russia, a study for which he was awarded the Science and Technology Prize by the Russian government in 2002. He has received a number of governmental awards, including the title of Honorable Miner of the Russian Federation in 1997.

Vladimir A. Polin has been a member of our Board of Directors since June 2007. He is the Director of Aluminium Division East of Rusal Global Management B.V. ZAO, a position he has held since July 2010. From December 2008 to June 2010 he served as Senior Vice President of Mechel OAO. From June 2006 to December 2008 Mr. Polin served as Chief Executive Officer of Mechel-Steel Management. From July 2003 to June 2006, he was our Senior Vice President for Production and Technical Policy. From February 2002 until

Table of Contents

June 2003, Mr. Polin served as the First Deputy General Director of our Beloretsk Metallurgical Plant. From September 2001 until July 2002, Mr. Polin served as Head of Sales of our Chelyabinsk Metallurgical Plant. Mr. Polin has almost 27 years of operational and management experience in the manufacturing and marketing of steel products, and holds a degree in metallurgy from Chelyabinsk Polytechnic University. Mr. Polin beneficially owns 0.002% of our common shares.

Valentin V. Proskurnya has been a member of our Board of Directors since March 2003. From July 2007 to July 2009 he served as the Chairman of our Board of Directors. From May to December 2003, Mr. Proskurnya was the Director of Economics at Mechel Trading House. From 2001 to 2005, Mr. Proskurnya was a member of the Board of Directors of Chelyabinsk Metallurgical Plant. From 1999 to 2005, he was a member of Board of Directors at Southern Kuzbass Coal Company. Mr. Proskurnya has over 38 years of engineering, financial and management experience in the coal mining industry and holds a degree in labor economics from the Higher School of Trade Unions. Mr. Proskurnya has been decorated with all three grades of the Miner's Glory order by the Russian government. In addition, the Russian President awarded him the title of Honorable Economist of the Russian Federation.

Roger I. Gale has been a member of our Board of Directors since October 2004. Mr. Gale is currently Chief Executive Officer and Chairman of the Board of Directors of Sedia Biosciences Corporation, based in the U.S. He was Chairman of the Board of Directors and Chief Executive Officer of Calypte Biomedical Corporation, a U.S. company headquartered in Portland, Oregon from mid-2006 to June 2008. From 2001 until mid-2006, Mr. Gale was the Chairman of the Board of Directors and Chief Executive Officer of Wavecrest Group Enterprises Limited, a telecommunications service provider. From 1999 to 2001, he was Chairman of the Board of Directors and co-founder of End2End Wireless Limited, a wireless communications services provider. From 1996 to 1998, Mr. Gale was Chief Executive Officer of AIG-Brunswick Capital Management, a \$300 million Russian investment fund sponsored by OPIC. From 1988 to 1996, Mr. Gale worked for the International Finance Corporation of the World Bank (the IFC), including as the Chief of the IFC's Resident Mission in Russia from 1992 to 1995. Mr. Gale also worked for nine years for the Asian Development Bank, and has lectured in economics at the University of New England (Australia) and Lincoln College (New Zealand). Mr. Gale holds a diploma from the Royal Agricultural College and holds a masters degree in economics from the University of New England.

A. David Johnson has been a member of our Board of Directors since October 2004. Mr. Johnson is currently an adviser to the board of directors of Neuerth Coal Holdings, a position he has held since April 2007, and also serves as a consultant to the board of directors of Joy Mining Machinery UK Ltd. From 1990 to 2002, Mr. Johnson was Managing Director of Joy Mining Machinery UK Ltd. From 1984 to 1990, Mr. Johnson was the Managing Director of Dosco Overseas Engineering, a UK-based mining equipment manufacturer. He also worked at the UK National Coal Board from 1953 to 1960. From 1990 to 1992, he served as President of the Association of British Mining Equipment Companies. In 1998, he was awarded the Order of Friendship by the Russian government for services to the Russian coal industry. Mr. Johnson is a qualified mining engineer having obtained the UK Mining Qualifications Board Certificate in 1959.

Serafim V. Kolpakov has been a member of our Board of Directors since June 2004. Since 1992, Mr. Kolpakov has served as President of the International Metallurgists Union, a steel industry-focused research organization. From 1991 to 1992, he was Vice President of the Advanced Materials Association in Moscow, a public consulting and research organization. From 1985 to 1991, Mr. Kolpakov was Minister of Metallurgy of the USSR and, from 1978 to 1985, First Deputy Minister and Deputy Minister of Metallurgy of the USSR. From 1970 to 1978, he was the General Director of Novolipetsk Iron and Steel Works. Mr. Kolpakov graduated from the Moscow Institute of Steel and Alloys with an engineering degree and is a Doctor of Technical Sciences. He is a member of the International Engineering Academy, the Engineering Academy of Russia (holding the position of Vice President) and the Presidium of the Academy of Information Technologies and Processes. Mr. Kolpakov has invented more than 400 steel-making technology improvements, and authored over 500 scientific publications. He has received a number of government

awards, including the State Prize of the USSR in 1981 and 1985, the Prize of the Council of Ministers of the USSR (twice) and the title of Honorable Metallurgist of the Russian Federation and Czechoslovakia.

Table of Contents

Igor S. Kozhukhovskiy has been a member of our Board of Directors since June 2008. Mr. Kozhukhovskiy is currently a member of the Board of Directors of, and the General Director of, APBE ZAO and Management ZAO APBE ZAO, companies engaged in the energy sector. From 2000 to 2008, Mr. Kozhukhovskiy was head of a department of UES. From 1997 to 1999, he was Deputy Minister of Fuel and Energy of the Russian Federation. Mr. Kozhukhovskiy has degrees in Metallurgical Industrial Engineering and Mining Electrical Engineering from the Siberian Metallurgical Institute. He also has a doctorate in economics.

Vladimir V. Gusev has been a member of our Board of Directors since July 2009. In 2008 Mr. Gusev held the position of Vice President for Finance of the State Corporation *Olympstroy*. From 2005 to 2008, he was Deputy Head of the Federal Tax Service of the Russian Federation. From 1999-2005, he was First Deputy Minister of Taxes and Levies of the Russian Federation. Mr. Gusev has a law degree from St. Petersburg State University and holds a doctorate in economics. He was awarded with several national awards and, under the Decree of the President of the Russian Federation in 2000, with the title of Honored Economist of the Russian Federation. Mr. Gusev has authored more than 30 scientific papers and publications.

All of our current directors were elected on June 30, 2010, and their terms expire on the date of our next annual shareholders meeting, which will take place not later than June 30, 2011. The business and mailing address for all our directors and executive officers is Krasnoarmeyskaya Street 1, Moscow 125993, Russian Federation.

Compensation

Our directors and executive officers were paid an aggregate of \$13.3 million for services in all capacities provided to us during 2010. The total amount set aside for pension, retirement and other similar benefits for our directors and executive officers as of December 31, 2010 was not material. Our directors and executive officers are also provided with voluntary medical insurance and the use of wireless services.

Board of Directors

Members of our Board of Directors are elected by a majority vote of shareholders at our annual shareholders meeting using a cumulative voting system. Directors are elected to serve until the next annual

Table of Contents

shareholders meeting and may be re-elected an unlimited number of times. Our Board of Directors currently consists of nine members, six of whom are independent pursuant to the director independence criteria set forth both in the applicable FFMS regulations and the New York Stock Exchange (**NYSE**) regulations, as well as in the Bylaw on the Board of Directors of Mechel OAO. The Board of Directors is responsible for our overall management, except matters reserved for our shareholders. See Item 10. Additional Information General Meetings of Shareholders for more information regarding the competence of our shareholders meetings. Some of the members of our Board of Directors, as well as the members of the boards of directors of our subsidiaries, serve pursuant to contracts. These contracts do not provide for any benefits upon termination of their directorship.

Committees of the Board of Directors

Audit Committee

The Audit Committee of our Board of Directors consists of Roger Gale, Vladimir Gusev and David Johnson, each of whom is an Independent Director. Our Audit Committee operates pursuant to a bylaw, which is available at www.mechel.com. The purpose of this Committee is to assist the Board of Directors with its oversight responsibilities regarding:

- the quality and integrity of our financial statements;
- our compliance with legal and regulatory requirements;
- the independent auditor's qualifications and independence; and
- the performance of our internal audit function and independent auditor.

Committee on Investments and Strategic Planning

The members of the Committee on Investments and Strategic Planning are Serafim Kolpakov, David Johnson, Igor Kozhukhovskiy, Igor Zyuzin and Valentin Proskurnya. The Committee on Investments and Strategic Planning defines our strategic goals and defines our priorities. The Committee makes recommendations to the Board of Directors on our dividend policy and on the adjustments to our strategy as required in order to enhance our efficiency. Our Committee on Investments and Strategic Planning operates pursuant to a bylaw, which is available at www.mechel.com.

The following sub-committees were set up under the Committee on Investments and Strategic Planning:

- Sub-committee on metallurgical production strategy, with members Serafim Kolpakov and Vladimir Polin;
- Sub-committee on mining production strategy, with members Alexander Yevtushenko and David Johnson; and
- Sub-committee on power production strategy, with members Igor Kozhukhovskiy and Valentin Proskurnya.

Committee on Appointments and Remuneration

The members of the Committee on Appointments and Remuneration are Roger Gale, Serafim Kolpakov, Vladimir Gusev and Alexander Yevtushenko. The Committee on Appointments and Remuneration has been established to maintain continuity and high professional standards, as well as to work out a competitive remuneration system, within our group. The Committee prepares recommendations to the Board of Directors on candidates for appointment to the

Management Board or as our chief executive officer or other executive officers or senior officers of our subsidiaries. It also prepares appraisals of their performance and makes recommendations regarding their remuneration. The Committee also defines the requirements applicable to nominees to the Board of Directors and informs the shareholders of such nominees. The Committee operates pursuant to a bylaw, which is available at www.mechel.com.

Table of Contents

Management Board

In August 2007, we created a Management Board to provide for greater oversight of our operations. For more information, see Item 10. Additional Information Management Board. The members of the Management Board are set out above under Directors and Executive Officers.

Management Companies

We have five management companies within the group which provide management services to the companies within the mining, steel, ferroalloys and power segments and to our companies within our transport division.

Mechel-Steel Management

In October 2005, Mechel Management OOO was established as a wholly-owned subsidiary of Mechel OAO with the purpose of providing management services to our subsidiaries by performing the functions of their respective management bodies. Currently, Mechel Management OOO provides management services to most of the subsidiaries within our steel segment and since September 14, 2009, Mechel Management OOO has been renamed Mechel-Steel Management. The name has been changed in line with the reorganization of our group management structure. In each case, Mechel-Steel Management acts as a management body under a service agreement executed with the following subsidiaries: Chelyabinsk Metallurgical Plant, Beloretsk Metallurgical Plant, Urals Stampings Plant, Vyartsilya Metal Products Plant, Izhtal and Kaslinsky Architectural Art Casting Plant.

Mechel Mining Management

Mechel Mining Management was established in July 2008 as a wholly-owned subsidiary of Mechel Mining with the purpose of providing management services to the production subsidiaries of Mechel Mining by performing the functions of the respective executive management bodies of the companies within our mining segment: Southern Kuzbass Coal Company, Korshunov Mining Plant, Yakutugol, Moscow Coke and Gas Plant and Mechel-Coke.

Mechel Ferroalloys Management

Mechel Ferroalloys Management was established in May 2008 as a wholly-owned subsidiary of Mechel OAO with the purpose of providing management services to the production subsidiaries of Oriel Resources by performing the functions of the respective executive management bodies of the companies within our ferroalloys segment: Southern Urals Nickel Plant, Bratsk Ferroalloy Plant and Tikhvin Ferroalloy Plant.

Mechel-Energo

Mechel-Energo was established in May 2001 under the name of Regional Energy Company ENERGOSBYT OOO. In April 2004, we acquired the company with a view to make the strategic and operational management of our power assets more efficient. The name of the company was changed to its current name in April 2004. Mechel-Energo also performs the functions of the respective executive management bodies of its subsidiaries: Southern Kuzbass Power Plant and Kuzbass Power Sales Company.

Mecheltrans Management

Mecheltrans Management was established in March 2010 as a wholly-owned subsidiary of Mechel OAO and since April 1, 2010 provides management services to the companies within our transport division by performing the functions of the respective executive management bodies of Mecheltrans, Port Posiet, Port Kambarka and Port

Temryuk.

Table of Contents

Review Commission

The Review Commission verifies the accuracy of our financial reporting under Russian law and generally supervises our financial activity. The members of our Review Commission are nominated and elected by our shareholders to serve until the next annual shareholders meeting. Our Chief Executive Officer, a member of our Board of Directors and a member of our Management Board may not simultaneously be a member of the Review Commission. Our Review Commission currently has three members: Lyudmila E. Radishevskaya, who serves as Chairman, and Natalia G. Mikhaylova and Alexey V. Zagrebin. The powers and duties of our Review Commission are governed by regulations approved by our shareholders meeting. Ms. Radishevskaya is the Chief Accountant of Mechel Trade House, Ms. Mikhaylova is a senior litigation lawyer of Mechel-Steel Management and Mr. Zagrebin is a head of internal audit department of Mechel-Service.

Internal Control and Audit Department

The Internal Control and Audit Department's main function is to systematically, consistently and independently from our management assess and improve the efficiency of our group's risk management, internal control, corporate governance and information systems. The activities of the Internal Control and Audit Department are governed by the Bylaw on the Internal Control and Audit Department. Elena V. Pavlovskaya-Mokhnatkinà is the head of the Internal Control and Audit Department. The Department is functionally subordinated to the Audit Committee of the Board of Directors, and administrated by our Chief Executive Officer.

Corporate Governance Principles

Our corporate governance principles are based on the Russian Corporate Governance Code recommended by the FFMS and supplemented by the obligations of the Board of Directors prescribed by Russian law, our charter and internal rules of procedure. The principles are intended to ensure that we are managed and monitored in a responsible and value-driven manner. They include the protection of shareholders' rights, comprehensive disclosure and transparency requirements and rules governing conflicts of interest. We are committed to continuing to adapt our corporate governance principles to developments in best-practices. Our corporate governance principles are reflected in our corporate documents, such as:

the Charter;

the Bylaw on the Board of Directors;

the Bylaw on the General Meeting of Shareholders;

the Bylaw on the General Director;

the Bylaw on the Collegial Executive Body (Management Board);

the Bylaw on the Review Commission;

the Bylaw on the Internal Control and Audit Department;

the Code of Business Conduct and Ethics;

the Bylaw on the Prohibition and Prevention of Insider Trading;

the Bylaw on the Disclosure of Information That May Significantly Impact the Market Value of our Shares;

the Bylaw on Information Policy;

the Bylaw on the Appointment and Compensation Committee of the Board of Directors;

the Bylaw on the Investments and Strategic Planning Committee of the Board of Directors;

the Bylaw on the Audit Committee of the Board of Directors; and

the Code of Corporate Governance.

Table of Contents

These documents are available at www.mechel.com and www.mechel.ru.

We also comply with the corporate governance requirements applicable to Russian public companies listed on Russian stock exchanges. Such requirements include: (1) the obligation to have at least three independent directors; (2) the establishment of an audit committee and a committee on human resources and compensation; (3) the establishment of a collegial executive management body; (4) the adoption of a bylaw on insider trading; (5) the adoption of a bylaw setting out the rules and policies on disclosure of information about the issuer; and (6) implementation of internal control procedures.

We also comply with applicable corporate governance requirements of the NYSE. The NYSE permits listed companies that are foreign private issuers, such as Mechel, to follow their home jurisdiction governance practice where it differs from the NYSE requirements. In addition, we have voluntarily complied with certain other requirements applicable to U.S. companies under NYSE listing standard 303A. A summary description of NYSE listing standard 303A showing our compliance therewith and/or the alternative corporate governance practices followed by us is available at www.mechel.com. See also Item 16G. Corporate Governance.

Employees

At December 31, 2010, we employed approximately 88,146 people as follows:

Company	Primary Location	Primary Function	Total

Set out below is information about membership of our employees in trade unions:

Employees of Chelyabinsk Metallurgical Plant, Beloretsk Metallurgical Plant, Southern Urals Nickel Plant, Korshunov Mining Plant, Moscow Coke and Gas Plant, Mechel-Coke, Izhstal, Bratsk Ferroalloy Plant, Spetsremzavod, Management Metallurgical Equipment Repair, Mechel-Materials and Pugachev open pit are members of the Ore Mining and Smelting Trade Union of Russia.

Employees of Urals Stampings Plant are members of Trade Union of Machinists of the Russian Federation, employees of Chelyabinsk and Izhevsk branches of Urals Stampings Plant are members of the Ore Mining and Smelting Trade Union of Russia.

Employees of Southern Kuzbass Coal Company are members of the Russian Independent Trade Union of Coal Industry Workers and of the Independent Trade Union of Miners.

Employees of Yakutugol and Mechel-Remservice are members of the Russian Independent Trade Union of Coal Industry Workers.

Employees of Voskhod-Chrome and Voskhod-Oriel are members of Public Association Trade Union Organization Voskhod.

Employees of Port Posiet are members of the Russian Independent Stevedores Trade Union.

Edgar Filing: Mechel OAO - Form 20-F

Employees of Southern Kuzbass Power Plant and Kuzbass Power Sales Company are members of the All-Russian Power Industry Trade Union.

Employees of Mechel Targoviste are members of Free Independent Trade Union of Specialty Steels Plant Mechel Targoviste and of the Metallurgists Trade Union of Mechel Targoviste.

Table of Contents

Employees of Mechel Campia Turzii are members of Trade Union Industria Sarmei Campia Turzii.

Employees of Ductil Steel are members of Trade Union Ductil Buzau.

Employees of Laminorul Plant are members of Trade Union Metal 94 and of Free Independent Trade Union of Laminorul Braila.

Employees of Toplofikatsia Rousse are members of the National Federation of Energy Workers of Bulgaria, the Confederation of Labor Podkrepa and the Union of Energy Workers of Bulgaria.

Employees of Mechel Nemunas are members of the Trade Union Nemunas.

Employees of Bluestone companies are members of the United Mine Workers of America.

As of October 30, 2010, 37 employees of Port Kambarka were members of the Trade Union Organization of Port Kambarka. Since November 1, 2010 Trade Union Organization of Port Kambarka ceased to exist based on the court's decision.

We consider our relationship with our employees to be good.

Item 7. Major Shareholders and Related Party Transactions

The following table sets forth information regarding our major shareholders, which means shareholders that are the beneficial owners of 5% or more of our common shares, as of March 31, 2011, based on the information available to us:

Name of Beneficial Owner	Number of Common Shares	% of Common Shares
Igor V. Zyuzin ⁽¹⁾	277,903,025	66.76%
Other ⁽²⁾⁽³⁾	138,367,720	33.24%
Total	416,270,745	100%

(1) Mr. Zyuzin is the Chairman of our Board of Directors. See Item 6. Directors, Senior Management and Employees Directors and Executive Officers. His business address is Krasnoarmeyskaya Street 1, Moscow 125993, Russian Federation. Further information regarding Mr. Zyuzin's shareholdings is available in the Schedule 13D filed by Mr. Zyuzin with the SEC.

(2) According to Deutsche Bank Trust Company Americas, as of March 31, 2011, 115,425,447 common ADSs and 29,761,608 GDSs were outstanding, representing 35.0% of our total issued common shares.

(3) We believe our directors and executive officers as a group, other than Mr. Zyuzin, own fewer than 1% of our shares.

As of March 31, 2011, there were 115,425,447 common ADSs outstanding, all of which were held by one registered holder with an address in the United States. In November 2010 we commissioned a report on our shareholding structure from IPREO, according to which approximately 10.11% of our total issued common shares in the form of ADSs were held by U.S. investors.

None of our common shareholders have voting rights which differ from any other holders of our common shares. Based on our share register, we believe we are not directly or indirectly owned or controlled by another corporation or government, and that there are no arrangements the operation of which may result in a change of control.

Mechel has 138,756,915 preferred shares of which 41.83% are held by the Justice persons, 18.17% are in public float and the remaining preferred shares are held by Skyblock Limited, a wholly-owned subsidiary of Mechel. The Justice persons acquired 60% of our preferred shares in connection with our acquisition of Bluestone. The Justice persons are residents of the United States. During 2010, the Justice persons sold 18.17% of the preferred shares they owned creating the current public float.

Table of Contents**Related Party Transactions**

In addition to the below, see note 9 to the consolidated financial statements.

Transactions with related metallurgical plants

In the second half of 2009 due to the global financial crisis, a number of small and mid-sized Russian metallurgical plants did not have sufficient working capital to continue their operations and were subjected to bankruptcy procedures and other demands from their creditors. Utilizing the opportunity to win the share these plants occupied in our core markets, we agreed to work on a commercial basis with these plants, supplying raw materials to these plants and purchasing their products pursuant to short-term supply and purchase contracts. In certain cases, we also obtained representation on their board of directors and management. In 2009, these plants included:

In 2009	Segment	Products	Location
Volga Fest	Steel	Semi-finished steel products	Russia
Rostov Electrometallurgical Plant	Steel	Semi-finished cast steel products	Russia
Vostochnaya Mine	Mining	Coal	Russia
Experimental TES	Power	Electric power	Russia
Zlatoust Metallurgical Plant	Steel	Semi-finished steel products	Russia
Guryevsk Metallurgical Plant	Steel	Semi-finished and long steel products, grinding steel balls	Russia
Volgograd Small Diameter Pipe Plant	Steel	Pipes	Russia
Engels Pipe Plant	Steel	Pipes	Russia

In 2010 we entered into similar arrangements with the following Russian and foreign plants and a Swiss trading company (which trades in the products of the Russian metallurgical plants described above):

In 2010	Segment	Products	Location
Donetsk Electrometallurgical Plant	Steel	Semi-finished steel products	Ukraine
Invicta Merchant Bar	Steel	Semi-finished steel products	United Kingdom
Metrus Trading GmbH	Steel	Semi-finished and long steel products, pipes	Switzerland
MIR Steel	Steel	Semi-finished rolled steel products	United Kingdom
Nytva	Steel	Bimetallic alloys, cutlery	Russia
Estar Egypt for Industries	Steel	Semi-finished rolled steel products	Egypt

All the metallurgical plants and trading companies set out above are considered related parties in our consolidated financial statements and are herein referred to as the **related metallurgical plants** .

In particular, we conduct the following transactions with the related metallurgical plants:

Purchase of raw materials and semi-finished products from third parties and their resale to the related metallurgical plants;

Sales of raw materials and semi-finished products produced by our group and certain services to the related metallurgical plants;

Purchase of semi-finished products from the related metallurgical plants for further processing by our group; and

Purchase of semi-finished and finished products from the related metallurgical plants for sale to third parties by our trading companies.

These transactions are carried out in joint interest of both parties and on market terms, except that we provide extended credit terms, varying from 30 to 180 days, which assists the related metallurgical plants with their working capital management. Our management carefully monitors receivables from and prepayments to the related metallurgical plants and we have not incurred any losses for unpaid amounts. Accounts receivable from and prepayments to the related metallurgical plants amounted to \$512.0 million as of December 31, 2010. No allowance was credited against this amount as of December 31, 2010.

Table of Contents

The products of these plants are supplementary to and help to expand our product line in the steel market and particularly benefit our Mechel Service business in Russia. In some cases, the products of the related metallurgical plants are high-quality and specialized products for which there is a stable demand in the domestic and export markets. The related metallurgical plants obtain the benefit of our strong supply and sales network. In general, our group is either the largest supplier or customer of the related metallurgical plants, which also allows us to more closely work with these plants to improve the efficiency of their operations. While trading activities do not typically generate as high margins as sales of products produced by us, our transactions with the related metallurgical plants nevertheless allow us to earn additional margin which contributes to our net income.

During the years ended December 31, 2010 and 2009, the group's transactions with the related metallurgical plants for the four categories of transactions set out above amounted to:

Category of transaction	Nature of Item	December 31, 2010	December 31, 2009
		(In thousands of U.S. dollars)	
Purchase of raw materials and semi-finished products from third parties and their resale to the related metallurgical plants	Costs	211,193	8,817
	Sales ⁽¹⁾	227,512	9,002
Sales of goods produced by our group and certain services to the related metallurgical plants	Sales	218,603	57,206
Purchase of semi-finished products from the related metallurgical plants for further processing by our group	Costs	174,821	4,683
Purchase of semi-finished and finished products from the related metallurgical plants for sale to third parties by our trading companies	Costs	974,206	113,145
	Sales	1,051,184	123,653

(1) Recognized as revenues in the amount of \$201.2 million and \$nil in the years ended December 31, 2010 and 2009. See note 9 to the consolidated financial statements.

As of December 31, 2010 and 2009, the group had the following balances with the related metallurgical plants:

Assets	December 31, 2010	December 31, 2009
	(In thousands of U.S. dollars)	
Trade accounts receivable	183,106	41,079
Prepayments and other current assets	328,912	51,099
	512,018	92,178
Liabilities		
Trade accounts payable	91,122	11,396
Advanced received and other payables	721	353

91,843**11,749**

Inventories in stock purchased from these entities amounted to \$166.3 million and \$66.1 million as of December 31, 2010 and 2009, respectively.

As the market situation improved in 2010, most of the related metallurgical plants exited formal bankruptcy procedures and agreed with their creditors to restructure and extend the repayment of their debts. With their improved finances and due to the continued strength in the steel sector, we expect that our commercial dealings with the related metallurgical plants will continue to benefit our group and we intend to continue such dealings. From December 31, 2010 to the date of this document, our commercial dealings with the related metallurgical plants have continued substantially in the same manner as described above.

For substantially all of the sales in the first and fourth categories of transactions (i.e., resales of products supplied to and resales of products purchased from the related metallurgical plants), the group recorded the costs and sales separately on a gross basis in the statement of income and comprehensive income (loss). See note 9 to the consolidated financial statements.

Table of Contents***Transactions with Metallurg-Trust***

In 2010, the group started transactions with Metallurg-Trust OOO (**Metallurg-Trust**), a trading company which can be significantly influenced by the group through business relationships. Metallurg-Trust is mostly involved in reselling the goods produced by Russian related metallurgical plants described above on the Russian market and supplying raw materials and semi-finished goods to the Russian related metallurgical plants. In 2010, the group sold to Metallurg-Trust \$220.2 million of pig iron and semi-finished goods produced by Chelyabinsk Metallurgical Plant for further supply to the Russian related metallurgical plants. The transactions used market pricing, although extended credit terms of 90-180 days were provided. Accounts receivable from Metallurg-Trust amounted to \$127.8 million as of December 31, 2010. No allowance was created against this amount as of December 31, 2010.

See also Item 3. Key Information Risk Factors Risks Relating to our Financial Condition and Financial Reporting Any material change in our commercial dealings with or loss of accounts receivable from or prepayments to certain related parties could have a material adverse effect on our business, results of operations and financial condition.

Transactions with the Controlling Shareholder

As of the date of this document, the Controlling Shareholder owns 100% of the shares of Calridge Ltd. (**Calridge**), and in addition, holds his shareholdings in Mechel through Calridge and its subsidiaries.

For the period since January 1, 2008 to the date of this document (the **covered period**), Calridge and the group extended financing to each other through loans and purchase of promissory notes of Calridge at market rates of interest. As of the date of this document, the group did not have any loans outstanding to Calridge. As of December 31, 2010, 2009 and 2008, the total amount of loans outstanding were \$nil, \$nil and \$2.4 million, respectively. The largest total amount of loans outstanding during the covered period was \$135.7 million in June 2010. As of the date of this document, the group did not hold any promissory notes of Calridge. As of December 31, 2010, 2009 and 2008, the total amount of promissory notes of Calridge outstanding held by the group (including those under the asset management agreement with Coalmetbank, which was a related party of the group until September 2009) were \$nil, \$59.0 million and \$52.8 million, respectively. The largest total amount of promissory notes of Calridge held by the group (including those under the asset management agreement with Coalmetbank) during the covered period was \$59.0 million. As of December 31, 2010, 2009 and 2008, there were no outstanding loans payable to Calridge. The largest total amount of loans outstanding during the covered period was \$47.5 million in July 2010. See also note 9 to the consolidated financial statements.

On June 30, 2008, the Justice persons entered into an option agreement with Calridge to sell 100% of capital stock and membership interests in the Bluestone companies. Under the option agreement, Calridge paid \$100.0 million in cash as a prepayment on July 3, 2008. On August 19, 2008, Calridge assigned all the rights under the option agreement to a subsidiary of Mechel for the consideration of \$100.0 million plus accrued interest of \$1.5 million. Mechel completed the acquisition of the Bluestone companies in May 2009.

On June 30, 2008, Mechel acquired 613,624 ordinary shares, or 1.72%, of Southern Kuzbass Coal Company from the Controlling Shareholder in exchange for 190,985,726 ordinary shares, or 1.56%, of Mechel-Mining. The fair value of the exchanged share packages was estimated based on the available market quotes of the shares involved and considered to be equal. The exchange was accounted for as a transaction between entities under common control and recorded at historical cost. See note 3(h) to the consolidated financial statements.

In September 2010, the Controlling Shareholder acquired Usina Siderurgica do Para Ltda (**Usipar**), a steel company located in Brazil. During the period from September through December 31, 2010, the group's purchases of pig iron ore

amounted \$7.5 million, and the group's sales of coke and other raw materials to Usipar amounted \$13.4 million. As of December 31, 2010, trade accounts receivable from and prepayments to Usipar amounted to \$42.2 million. No allowance was credited against this amount as of December 31, 2010.

Item 8. *Financial Information*

See Item 18. Financial Statements.

Litigation

Other than the legal proceedings described below, we are not involved in any legal proceedings that we believe to be material.

New Uregolsk license area

In 1994, Sibirginsk Open Pit Mine (currently a branch of Southern Kuzbass Coal Company) received a subsoil license to develop all reserves of the Uregolsky 1-2 area. However, due to what we believe was a technical error made when the license was originally issued, there is an uncertainty as to whether the Uregolsk license area includes a part of the mine site with 37 million tonnes of coal deposits (the New Uregolsk license area). See Item 4. Information on the Company Mining Segment Coal Production.

On May 19, 2008, a criminal case was initiated under Article 255 of the Criminal Code of the Russian Federation against an unspecified group of persons for violating subsoil safety and use regulations on the New Uregolsk license area of the Uregolsk coal deposit. On September 15, 2008, the district court ruled the order to open a criminal case to be illegal. The prosecutor appealed this decision, but the decision was upheld by the court of cassation. On February 10, 2009, the investigative officer issued a decision not to prosecute based on the results of the investigation. The statute of limitation on such criminal charges is two years.

On March 18, 2009, another criminal case under Article 171 of the Criminal Code of the Russian Federation was initiated against the management of Sibirginsk Open Pit Mine alleging deliberate illegal business practices involving violation of license regulations and rules governing subsoil use, and conducting mining operations outside the area of the Uregolsk license without a proper permit. On July 16, 2010, the criminal case was closed on grounds that no elements of crime were found.

Under Russian law, the state is the owner of subsoil resources. Generally, Russian law allows the state authorities to recover damages for illegally mined minerals. The Russian state authorities have not made any claims for damages for the 1.1 million tonnes of coal that Southern Kuzbass Coal Company mined on the New Uregolsk license area for the period from January 1, 2006 to March 13, 2008, which we believe was extracted in full compliance with the prevailing legislation and with the prior consent and knowledge of the relevant authorities. In March 2011, Southern Kuzbass Coal Company participated in a tender held for the right to use the New Uregolsk license area and on March 21, 2011 it was granted the right to use the New Uregolsk license area. Currently, no mining activity is conducted on the New Uregolsk license area.

Tax

On April 15, 2010, our subsidiary Chelyabinsk Metallurgical Plant received assessment from the tax authority for VAT, income tax, interest and incurred penalties for the total amount of 1.3 billion rubles relating to the year 2007. We have contested this assessment with higher-level tax authorities. The higher-level tax authority invalidated the tax authority's assessment in the amount of 1.14 billion rubles. Chelyabinsk Metallurgical Plant filed a claim with the Moscow Arbitrazh Court for the remaining amount of 172.8 million rubles. On March 28, 2011, the Moscow Arbitrazh Court rendered a decision in our favor. The tax authority may appeal the decision within one month.

On February 17, 2010, Korshunov Mining Plant filed a claim against the Russian tax authorities seeking the invalidation of a tax assessment issued by the tax authorities for the 2005-2007 period in a total amount exceeding 127.4 million rubles, including 73.3 million rubles assessed in connection with transfer pricing. On June 25, 2010, the Moscow Arbitrazh Court ruled in our favor to reduce the assessment by 8.0 million rubles. Korshunov Mining Plant appealed. The decision of the Moscow Arbitrazh Court was upheld by the court of appeal and the court of cassation and entered into force. On February 11, 2011, we also appealed the decision to the Supreme Arbitrazh Court to seek invalidation of the profit tax assessment in the amount of 73.3 million rubles connected with transfer pricing. On February 25, 2011, we appealed this decision to the Supreme

Table of Contents

Arbitrazh Court to seek invalidation of the profit tax assessment in the amount of 34.2 million rubles. On March 4, 2011, the Supreme Arbitrazh Court rejected the claim. The tax assessment was paid under a collection order in January 2011.

In October 2008, Chelyabinsk Metallurgical Plant filed a claim against the Russian tax authorities seeking the invalidation of a tax assessment issued by the tax authorities for the 2005-2006 period in a total amount exceeding 3.6 billion rubles. On March 27, 2009, the Moscow Arbitrazh Court invalidated the tax authorities' assessment in part, but recognized a tax assessment in the remaining amount of 505.8 million rubles, including fines. On August 3, 2009, the Ninth Arbitrazh Court of Appeal upheld the decision. On November 19, 2009, the Federal Arbitrazh Court of Moscow District reversed the decisions of the Moscow Arbitrazh Court and the Ninth Arbitrazh Court of Appeal and the case was remanded for a new trial. On April 2, 2010, the Moscow Arbitrazh Court rendered a decision to deny claims of Chelyabinsk Metallurgical Plant. On June 25, 2010, the Ninth Arbitrazh Court of Appeal reversed the decision of the Moscow Arbitrazh Court and invalidated the tax authorities' assessment in the amount of 505.8 million rubles. The tax authorities did not appeal and the decision of the court of appeal entered into force.

On February 11, 2009, Korshunov Mining Plant filed a claim against the Russian tax authorities seeking the refund of overpaid mineral extraction tax for the year 2005 in the amount exceeding 223.3 million rubles, including fines. On January 15, 2010, the Moscow Arbitrazh Court dismissed our claim. The decision of the Moscow Arbitrazh Court was upheld by the Ninth Arbitrazh Court of Appeal on April 07, 2010, by the Federal Arbitrazh Court of Moscow district on August 10, 2010, and by the Supreme Arbitrazh Court on October 21, 2010. On January 18, 19 and 21, 2011, we filed twelve petitions with the Arbitrazh Court of the Irkutsk region and with the Federal Arbitrazh Court of East Siberian District to reopen the case based on new facts discovered. Petitions were filed with mentioned above courts with respect to different periods in respect of which we claim overpaid tax. The Arbitrazh Court of the Irkutsk Region rejected nine of our claims, one claim will be considered on April 21, 2011, and two of our claims will be considered by the Federal Arbitrazh Court of East Siberian District on April 12, 2011.

On November 17, 2009, Chelyabinsk Metallurgical Plant filed a claim against the Russian tax authorities seeking the invalidation of VAT and profit tax overpayments offset executed by tax authorities in the amount of 414.0 million rubles. On September 23, 2010, the Moscow Arbitrazh Court rendered a decision in our favor. The amount of wrongly offset taxes was paid back to us. The tax authorities appealed the decision of the Moscow Arbitrazh Court and the court rejected the claim.

On December 24, 2010, Southern Kuzbass Coal Company filed a claim against the tax authorities seeking the invalidation of a tax assessment in the amount of 138.9 million rubles relating to 2007-2008 period. The court hearing is scheduled for April 21, 2011.

In addition, we have identified possible tax liabilities arising out of differing interpretations of tax laws and regulations, largely related to mineral extraction tax, which are not accrued in our consolidated financial statements as the amount of such liabilities was not significant as of December 31, 2010. See 26(d) to our consolidated financial statements.

Antimonopoly

In the summer of 2008, in the course of a regulatory inquiry into business practices on the Russian market of coking grades of coal concentrates, the FAS initiated an antimonopoly investigation into the business of our subsidiaries Mechel Trading House, Southern Kuzbass Coal Company, Yakutugol and Mechel Trading on allegations of abuse of their dominant position on the Russian market of coking coal concentrate. As a result of the investigation, in August 2008 the FAS issued findings according to which these subsidiaries were held to have violated Russian antimonopoly law by abusing their dominant position on the Russian market for certain grades of coking coal concentrate. The FAS

issued a directive requiring these subsidiaries to cease the violations and to change the terms of supply of coking coal concentrate to customers in Russia by: (1) refraining from establishing monopolistically high or low prices; (2) providing, to the extent possible, equal supply terms to all customers without discrimination; (3) submitting to the FAS during the next 5 years economic justifications of each coking coal concentrate price increase of more than 5% as compared to the

Table of Contents

prices of previous quarter; (4) reducing sale prices by 15% for the period from September 2008 until December 2008; and (5) executing long-term supply contracts of at least three years duration with effect from 2009. We fulfilled all terms set forth in the FAS directive and intend to continue to comply with them in the future.

Furthermore, as a result of the antimonopoly investigation, the FAS initiated administrative proceedings against Mechel Trading House, Southern Kuzbass Coal Company and Yakutugol which resulted in fines being imposed on these companies in the total amount of 797.7 million rubles, which is equal to approximately 5% of these subsidiaries total sales of coking coal concentrate for 2007. The companies were granted a deferral of the payment of the fines in accordance with the law. All fines have been paid in full.

In December 2008, the FAS initiated an investigation against Yakutugol for alleged violations of the antimonopoly legislation committed by way of abusing its dominant position in the market of steam coal. During the course of the investigation no violations were found on the part of Yakutugol and the case was closed.

Environmental and safety

During the period from March 2 to April 13, 2009, following the results of comprehensive inspections of industrial safety conditions at subsidiaries of Southern Kuzbass Coal Company, Rostekhnadzor has identified a number of violations, including the lack of expert examination of industrial safety of certain facilities, failure to implement measures to address safety violations identified in previous inspections, carrying on operations deviating from the approved projects and plans, and untimely updating of equipment. Rostekhnadzor imposed temporary bans on operations of four of our facilities and submitted the materials on all of the alleged administrative infractions to the court. Following the results of consideration of the cases, the court suspended the operations of one facility for 17 days. Currently, the operations of the facility in question have resumed. We implemented all immediate requirements prescribed in Rostekhnadzor's directive. The requirements with respect to revision of existing projects or development of new projects have been addressed in our mining development plan for 2011 and their implementation is being monitored by Rostekhnadzor.

In April 2009, Rostekhnadzor also conducted inspections at Southern Kuzbass Power Plant. In the course of the inspections, a number of violations were identified, mainly of a technical nature and connected with excessive wear of obsolete equipment and the company's failure to comply with certain industrial safety requirements, which resulted in destruction of boiler cladding and excessive levels of gas and dust in the boiler department. Rostekhnadzor stated in its order of April 6, 2009 that the identified violations must be rectified by implementing a number of measures. Most of the identified violations (197 out of 208) were rectified and certain prescribed measures were implemented within the time limits established by Rostekhnadzor. One of the measures was revoked by Rostekhnadzor. The remaining ten violations are being rectified by implementing the prescribed measures in accordance with a schedule agreed with Rostekhnadzor. In addition, the cladding and thermal insulation of the most problematic boilers have been repaired.

On July 2, 2010, following an inspection of compliance with industrial safety regulations, Rostekhnadzor issued an order to Southern Kuzbass Power Plant requiring it to undertake certain measures to rectify identified inconsistencies with the industrial safety regulations. The court of first instance rendered a decision in support to the Rostekhnadzor's order. Part of the measures prescribed by Rostekhnadzor, namely 165 out of 219 measures have already been implemented, nine measures have been revoked from execution. We are currently in process of implementing the remaining 45 measures. We have filed a request to the court to extend the deadline for the implementation of these measures. On March 2, 2011, the court allowed us to stay execution until April 15, 2011. On April 5, 2011, we filed a request to the court for a new extension of the deadline.

Pursuant to a claim of the Novokuznetsk Environmental Prosecutor's Office against Southern Kuzbass Power Plant concerning the discharge of pollutants into the atmosphere above the maximum allowable level, the court ruled in

September 2008 that we must limit the discharge of pollutants into the atmosphere to comply with the maximum allowable level. We have complied with the ruling effective as of November 2009. The court also mandated us to reconstruct the de-dusting system. We applied for stay of execution and the

Table of Contents

court allowed us to stay execution of this mandate, originally until July 1, 2010 and more recently until August 1, 2011.

On August 16, 2010, a spontaneous ignition of coal started in a mined-out section of a longwall working area at New-Olzhersk Underground Mine, a branch of Southern Kuzbass Coal Company. Rostekhnadzor imposed a temporary ban on operations at the branch. On August 23, 2010, the fire was sealed off. On August 26, 2010, the court rendered a decision to suspend operations at the New-Olzhersk Underground Mine for 90 days. On October 1, 2010, the court ruled to cancel the suspension of operations. Overburden and restoration works are now being implemented at the longwall working area and mining operations are expected to resume at the end of the second quarter of 2011.

In 2008, Pinnacle Mining Company (**Pinnacle**) filed a suit against the Bluestone companies and a third party engineering firm in the U.S. District Court for the Southern District of Beckley, West Virginia. Pinnacle asserts claims against the defendants for negligence, strict liability, violation of the Federal Surface Mining Control and Reclamation Act, and injunctive relief. The case arises from mining activity conducted by Bluestone companies in the safety zone of a coal slurry impoundment maintained by Pinnacle. The parties filed a joint motion to stay, and the court granted the stay, which has allowed additional time for the regulatory agencies involved to determine what steps are necessary for remediation. A plan has been submitted by the defendants and was approved by the West Virginia Department of Environmental Protection (**WVDEP**). We are vigorously defending the matter and have asserted issues of comparative fault by the plaintiff and our engineering company at the time of the incident in November 2007. Currently, an evaluation of the likelihood of success on this case is not possible. The regulatory agency will ultimately determine the resolution of this matter. Although some initial indications from WVDEP suggested that grouting of the mine may be the required remediation, recent developments indicate that the remediation could be less extensive. If grouting would be determined to be necessary, the estimated cost could be \$50.0 million. At this time more cost effective methods of repair and remediation have been tentatively agreed to by the parties and the regulatory agencies. Once the necessary remediation mandated by the relevant agencies is finalized, it should be possible to give a more accurate estimate of the potential range of loss. We have full indemnity on this claim from the previous owner of Bluestone in accordance with the terms of the acquisition agreement, however, there is no assurance that the previous owner of Bluestone will not contest our requests for indemnification.

Commercial litigation

In May 2009, Suncoke served Bluestone with a claim for failure to perform its obligations under contracts to supply coal to Suncoke in 2008. Our position is that Suncoke was able to cover the subject coal at no additional cost and that Suncoke was also in violation of its contractual obligations in 2008 for not accepting delivery of the tonnage as agreed under the supply contract. Suncoke demands approximately \$67.0 million plus attorney fees. In March 2010 Suncoke filed a lawsuit with the Superior Court of the State of Delaware in and for the New Castle County against Bluestone claiming damages for failure to supply coal in 2008 and 2009. We have full indemnity on this claim from the previous owner of Bluestone in accordance with the terms of the acquisition agreement, however, there is no assurance that the previous owner of Bluestone will not contest our requests for indemnification.

On March 19, 2009, MMK filed a claim in court against Mechel Trading House seeking invalidation of its five-year coking coal concentrate supply contract on the grounds that the contract was not approved by MMK's management board. On June 11, 2009, the court of first instance rendered a decision to deny the claim. MMK appealed this decision both in the court of appeal and in the court of cassation, however, MMK's appeal was dismissed. The court decision entered into full force.

On May 20, 2009, Metalltrade filed a court claim against Mechel Trading House seeking to terminate its five-year coking coal concentrate supply contract. On January 13, 2010, the court denied the claim. Metalltrade did not appeal. The court decision entered into full force.

Table of Contents

U.S. securities litigation

On April 8, 2009 a person who had been a holder of our common ADSs during the period October 2007-July 2008 filed an action against us in the United States District Court for the Southern District of New York, alleging claims against us and also naming as defendants the persons who were then our chief executive officer, our senior vice president and our vice president for finance. The case, *Frederick v. Mechel OAO*, No. 09 CV 3617 alleges claims under Sections 10(b) and 20(a) of the U.S. Securities Exchange Act of 1934. These claims arise from the FAS directive described above in Antimonopoly, in which the FAS claimed that our pricing of coal concentrate of coking grades within the Russian Federation violated Russian antimonopoly laws and that, in addition, we used pricing mechanisms which could give rise to tax claims and the imposition of considerable sanctions on the part of the Russian government. The plaintiff in the class action alleges that we and our officers should have foreseen or did foresee these actions by the Russian authorities, and that the failure to disclose these risks constituted securities fraud under U.S. law. Lead plaintiffs have been appointed in the case, and the lead plaintiffs' Second Amended Complaint, filed on February 19, 2010, seeks certification of a class comprising all those who purchased Mechel's securities on the New York Stock Exchange between October 3, 2007 and July 25, 2008, and seeks imposition of unspecified damages. We have engaged counsel and we are contesting this lawsuit vigorously. On April 2, 2010, we moved the court to dismiss all the claims against us. That motion has been fully briefed since June 21, 2010, and is awaiting decision. We express no opinion as to the likely outcome of the motion or of the case in general.

Dividend Distribution Policy

We will determine the amount of dividends payable on our common shares based on cash needs of our business, which will be influenced by the market situation, the level and availability of debt and the requirements of our capital investment program. In addition, our New Oriel Resources Facility Agreements and New Yakutugol Facility Agreements impose certain restrictions on the payment of dividends on common shares. See Operating and Financial Review and Prospects Description of Certain Indebtedness.

We calculate the amount of dividends payable on our preferred shares based on a formula which is fixed in our charter. See Item 10. Additional Information Description of Capital Stock Dividends.

The decision to pay dividends and the amount thereof must be recommended by our Board of Directors taking into account the Charter's provisions and approved by our shareholders. The amount of dividends, if any, approved by the shareholders may not be higher than the amount proposed by the Board of Directors. In particular, dividends may be declared and paid only out of net profits calculated under Russian accounting standards and as long as the following conditions have been met:

our charter capital has been paid in full;

the value of our net assets, calculated under Russian accounting standards, is not less (and would not become less as a result of the proposed dividend payment) than the sum of our charter capital, our reserve fund and the difference between the liquidation value and the par value of our issued and outstanding preferred shares;

we have repurchased all shares from shareholders having the right to demand repurchase; and

we are not, and would not become as the result of the proposed dividend payment, insolvent.

For a further description, please refer to Item 10. Additional Information Description of Capital Stock Dividends. See also Item 3. Key Information Risk Factors Risks Relating to Our Shares and the Trading Market Our ability to pay dividends depends primarily upon receipt of sufficient funds from our subsidiaries.

On June 30, 2010, Mechel declared a dividend of 453.7 million rubles for common shares and 456.5 million rubles for preferred shares (of which 182.6 million rubles for the preferred shares held by Skyblock Limited), which was paid in July and December 2010. On June 30, 2009, Mechel declared a dividend of 2.3 billion rubles for common shares and 7.0 billion rubles for preferred shares (of which

Table of Contents

2.8 billion rubles for the preferred shares held by Skyblock Limited), which was paid in October, November and December 2009. On June 29, 2008, Mechel declared a dividend of 10.98 billion rubles for common shares, which was paid in July and December 2008. In each case we could not pay dividends to those shareholders who did not provide us with their bank account details.

On April 8, 2011 our board of directors convened the annual general shareholders meeting on June 6, 2011. The board determined April 20, 2011 to be the record date for shareholders entitled to participate in the annual general shareholders meeting.

We anticipate that any dividends we may pay in the future on shares represented by ADSs will be declared and paid to the depositary in rubles and will be converted into U.S. dollars by the depositary and distributed to holders of ADSs, net of the depositary's fees and expenses. Accordingly, the value of dividends received by holders of ADSs will be subject to fluctuations in the exchange rate between the ruble and the U.S. dollar.

Significant Changes

Other than as described in this document, no significant change in our business has occurred since December 31, 2010.

Item 9. *The Offer and Listing*

Our common ADSs have been listed on the New York Stock Exchange under the symbol MTL since October 2004. Our common shares have been listed on the Russian Trading System (the RTS) under the symbol MTLR since June 2004, and in October 2008 were promoted to quotation list A-2. In December 2008, our common shares were admitted to trading on the Moscow Interbank Currency Exchange (MICEX) and included in quotation list V, and were promoted to quotation list A-1 in March 2009. Since the liquidity of our shares on MICEX is typically much higher than on RTS, in the table below starting from January 2009 we use MICEX data (conversion from rubles into U.S. dollars is made using the Central Bank of Russia exchange rate).

The following table sets forth the high and low closing prices per common ADS and common share for: (1) the most recent six months; (2) the most recent nine quarters; and (3) all years following our initial public offering in 2004. As of May 19, 2008, we changed the ratio of our common shares to common ADSs from 3:1

Table of Contents

to 1:1 by issuing two new common ADSs for each common ADS of record as of May 16, 2008. The common ADS prices below have been recalculated to reflect the new common ADS-to-common share ratio.

	Common ADSs		Common Shares	
	High	Low	High	Low
	(In U.S. dollars)			
March 2011	31.30	28.40	31.58	28.86
February 2011	34.59	28.65	32.74	29.64
January 2011	34.10	30.38	31.67	30.57
December 2010	29.58	24.47	29.04	24.32

Item 10. *Additional Information*

Charter and Certain Requirements of Russian Legislation

We describe below our registered common shares, the material provisions of our charter in effect on the date of this document and certain requirements of Russian legislation. In addition to this description, we urge you to review our charter, which is included as an exhibit to this document, to review its complete terms.

Our Purpose

Article 4.1 of our charter provides that our primary purpose is to earn profit, as well as to provide the highest-quality products and services for our customers.

Description of Capital Stock

General

Pursuant to our charter, as amended, we have the right to issue registered common shares, preferred shares and other securities provided for by the legislation of the Russian Federation with respect to securities. Our capital stock currently consists of 555,027,660 shares, including 416,270,745 common shares, each with a nominal value of 10 rubles, and 138,756,915 preferred shares, each with a nominal value of 10 rubles, all of which are fully paid, issued and outstanding under Russian law. Under Russian legislation, charter capital refers to the aggregate nominal value of the issued and outstanding shares. We are authorized to issue an additional 81,698,341 common shares with a nominal value of 10 rubles each. None of our capital stock is under option or agreed conditionally or unconditionally to be put under option. Any of our shares that are owned by our subsidiaries are not considered treasury shares under Russian law (i.e., they are considered outstanding shares), and we are able to vote such shares and dispose of such shares without any further corporate actions by our shareholders or board of directors, provided that such disposals are not major or interested party transactions. Currently, our wholly-owned subsidiary Skyblock Limited holds 55,502,766 preferred shares. The shares are considered issued and outstanding shares under Russian law and have all the rights attaching to other preferred shares. The preferred shares owned by Skyblock Limited are not considered outstanding for purposes of our U.S. GAAP financial statements.

Currently, we have more than 1,000 holders of voting shares, which determines the applicability of certain provisions of the Joint-Stock Companies Law, as described below. Deutsche Bank Trust Company Americas is considered under Russian law to be the sole holder of all of the shares underlying our ADSs and GDSs.

A resolution of our board of directors dated May 14, 2008 approved an increase in our charter capital through the issuance of 55,000,000 preferred shares with a nominal value of 10 rubles. On September 19, 2008, our Board of Directors amended its resolution to increase the number of preferred shares being issued to 138,756,915 preferred shares which is the maximum number of preferred shares authorized by our charter. The decision to issue 138,756,915 preferred shares was registered with the FFMS on October 23, 2008. On April 2, 2009, we placed all 138,756,915 of the preferred shares authorized for issuance at the placement price of 10 rubles per share. All the preferred shares were taken up by our wholly-owned subsidiary Skyblock Limited, which was the sole offeree. A report on the placement of the preferred shares was registered with the FFMS on April 14, 2009. We transferred 83,254,149 preferred shares to the sellers of 100% of the shares and interest of Bluestone Industries, Inc., Dynamic Energy, Inc. and JCJ Coal Group, LLC and certain other companies as part of the consideration in our acquisition of the Bluestone. Our preferred shares are not convertible into common shares, bonds or other securities of Mechel.

Rights attaching to common shares

Holders of our common shares have the right to vote at all shareholder meetings. As required by the Joint-Stock Companies Law and our charter, all of our common shares have the same nominal value and grant

Table of Contents

to their holders identical rights. Each fully paid common share, except for treasury shares, gives its holder the right to:

freely transfer the shares without the consent of other shareholders or the company;

receive dividends in accordance with our charter and current legislation;

participate in shareholders' meetings and vote on all matters of shareholders' competence;

transfer voting rights to its representative on the basis of a power of attorney;

elect and be elected to the governing and controlling bodies of the company;

if holding, alone or with other holders, 2% or more of the voting stock, within 30 days after the end of our fiscal year, make proposals to the agenda of the annual shareholders' meeting and nominate candidates to our board of directors, review commission and counting commission;

if holding, alone or with other holders, 10% or more of the voting stock, demand that the board of directors call an extraordinary shareholders' meeting or an unscheduled audit by our review commission or an independent auditor;

demand, under the following circumstances, the repurchase by us of all or some of the shares owned by it, as long as such holder voted against or did not participate in the voting on the decision approving the following:

our reorganization;

conclusion of a major transaction, as defined under Russian law; and

amendment of our charter or approval of a new version of our charter that restricts the holder's rights;

upon liquidation, receive a proportionate amount of our property after our obligations to our creditors are fulfilled;

have access to certain company documents, receive copies for a reasonable fee and, if holding alone or with other holders, 25% or more of the voting stock, have free access to accounting documents; and

exercise other rights of a shareholder provided by our charter, Russian legislation and decisions of shareholders' meetings approved in accordance with its competence.

Rights attaching to preferred shares

Pursuant to our charter, as amended, all of our preferred shares have the same nominal value and grant to their holders identical rights. Each fully paid preferred share gives its holder the right to:

freely transfer preferred shares without the consent of other shareholders;

receive dividends in accordance with our charter and current legislation;

upon liquidation, receive a portion of our liquidation value, which is equal to a portion of our assets calculated pro rata to the portion represented by one preferred share in our charter capital;

have access to certain company documents and receive copies for a reasonable fee;

transfer all or part of the rights attached to the preferred shares to its representative on the basis of a power of attorney; and

participate in shareholders' meetings and vote on the following matters:

our reorganization and liquidation;

any amendment of our charter or approval of a new version of our charter that restricts the preferred shareholders' rights, including amendments to the formula for calculation of dividends and/or the amount of the liquidation value attached to the shares; and

Table of Contents

participate in shareholders' meetings and vote on all matters on which common shareholders are entitled to vote if for any reason the annual shareholders' meeting did not adopt a resolution to pay the full amount of dividends to which preferred shareholders are entitled under our charter. The holders of preferred shares enjoy this right effective from the first shareholders' meeting to be held after the relevant annual shareholders' meeting and until the date when dividends on preferred shares are paid in full.

Pre-emptive rights

The Joint-Stock Companies Law and our charter provide existing shareholders with a pre-emptive right to purchase shares or securities convertible into shares in an amount proportionate to their existing holding of shares of the same category as the newly issued shares. In addition, the Joint-Stock Companies Law provides shareholders with a pre-emptive right to purchase shares or securities convertible into shares during a closed subscription if the shareholders voted against or did not participate in the voting on the decision approving such subscription. The pre-emptive right does not apply to placement of shares or securities convertible into shares through a closed subscription among existing shareholders only, provided that such shareholders may each acquire a whole number of shares or securities convertible into shares being placed in an amount proportionate to their existing holdings. We must provide shareholders with written notice of the proposed placement of shares at least 45 days prior to the offering, during which time shareholders may exercise their pre-emptive rights.

Dividends

The Joint-Stock Companies Law and our charter set forth the procedure for determining the dividends that we distribute to our shareholders. Shareholders may decide on whether or not to pay the dividends upon results of a financial quarter, half a year, nine months and/or year. Dividends are recommended to a shareholders' meeting by the board of directors, and approved by the shareholders' meeting by a majority vote. A decision on quarterly dividends must be taken within three months of the end of the respective quarter; a decision on annual dividends must be taken at the annual shareholders' meeting. A decision on payment of dividends for common shares can be taken only after the decision on payment of dividends for preferred shares is taken. The dividend approved at the shareholders' meeting may not be more than the amount recommended by the board of directors. Dividends are distributed to holders of our shares as of the record date for the shareholders' meeting approving the dividends. See *General Meetings of Shareholders' Notice and participation*. Dividends are not paid on treasury shares. In accordance with the amendments to the Joint-Stock Companies Law, which entered into force on December 31, 2010, a company is required to pay dividends within the time period, which is indicated in the charter or the shareholders' resolution approving the dividends, which may not be more than 60 days from the date of such resolution. A shareholder who is entitled to the declared dividends but has not received them has a right to make a claim to the company for the unpaid dividends within three years upon expiry of the dividend payment period. Upon expiry of this three year period, claims for declared and unpaid dividends will lapse in favour of the company.

The Joint-Stock Companies Law allows dividends to be declared only out of net profits calculated under Russian accounting standards and as long as the following conditions have been met:

the charter capital of the company has been paid in full;

the value of the company's net assets is not less (and would not become less as a result of the proposed dividend payment) than the sum of the company's charter capital, the company's reserve fund and the difference between the liquidation value and the par value of the issued and outstanding preferred shares of the company;

the company has repurchased all shares from shareholders who demanded repurchase; and

the company is not, and would not become, insolvent as the result of the proposed dividend payment.

Pursuant to our charter, as amended, we shall calculate the dividends for preferred shares on the basis of our consolidated financial statements prepared under accepted international accounting standards which we

Table of Contents

apply for the relevant accounting period, including IFRS and U.S. GAAP. The annual fixed dividend for one preferred share amounts to 20% of our net profit under our annual consolidated financial statements prepared in accordance with the applicable international accounting standards and audited by an independent auditor, divided by 138,756,915.

For the purpose of calculating the amount of dividends for preferred shares, we convert our net profit under the applicable international accounting standards into rubles using the official exchange rate of the CBR as of the date the board of directors decides to recommend the amount of dividends for the preferred shares.

If the dividend to be paid for one common share exceeds the dividend to be paid for one preferred share for the same year, we must increase the dividend to be paid for one preferred share up to the amount of dividend to be paid for one common share. For this purpose, if the nominal value of our common shares has changed (e.g., through a share split), the dividend to be paid for one common share is calculated as if its nominal value has not changed. If dividends for common shares are to be paid in kind, the monetary value of such payment must be evaluated by an independent appraiser.

Distributions to shareholders on liquidation

Under Russian legislation, liquidation of a company results in its termination without the transfer of rights and obligations to other persons as legal successors. The Joint-Stock Companies Law and our charter allows us to be liquidated:

by a three-quarters majority vote of a shareholders meeting; or

by a court order.

Following a decision to liquidate the company, the right to manage our affairs would pass to the liquidation commission which, in the case of voluntary liquidation, is appointed by a shareholders meeting and, in an involuntary liquidation, is appointed by the court. Creditors may file claims within a period to be determined by the liquidation commission, but which may not be less than two months from the date of publication of notice of liquidation by the liquidation commission.

The Civil Code gives creditors the following order of priority during liquidation:

individuals owed compensation for injuries or deaths;

payments related to disbursement of accrued vacation pay and wages of persons currently or formerly employed under an employment agreement and remuneration to owners of intellectual property rights;

federal and local governmental entities claiming taxes and similar payments to the budgets and non-budgetary funds; and

other creditors in accordance with Russian legislation.

Claims of creditors in connection with obligations secured by a pledge of the company's property (**secured claims**) are satisfied out of the proceeds of sale of the pledged property prior to claims of any other creditors except for the creditors of the first and second priorities described above, provided that claims of such creditors arose before the pledge agreements in respect of the company's property were made. To the extent that the proceeds of sale of the pledged property are not sufficient to satisfy secured claims, the latter are satisfied simultaneously with claims of the fourth priority creditors as described above.

The Joint-Stock Companies Law and our charter provides for an order of priority for distribution of assets of a company remaining after settlement with creditors are completed among the company's shareholders:

payments to repurchase shares from shareholders having the right to demand repurchase;

payments of declared but unpaid dividends on preferred shares and the liquidation value of the preferred shares determined by the company's charter, as amended; and

payments to holders of common and preferred shares with account of the previously paid liquidation value of the preferred shares.

Table of Contents

Liability of shareholders

The Civil Code and the Joint-Stock Companies Law generally provide that shareholders in a Russian joint-stock company are not liable for the obligations of a joint-stock company and bear only the risk of loss of their investment. This may not be the case, however, when one entity is capable of determining decisions made by another entity. The entity capable of determining such decisions is called an effective parent. The entity whose decisions are capable of being so determined is called an effective subsidiary. The effective parent bears joint and several responsibility for transactions concluded by the effective subsidiary in carrying out these decisions if:

 this decision-making capability is provided for in the charter of the effective subsidiary or in a contract between such entities; and

 the effective parent gives binding instructions to the effective subsidiary based on the above-mentioned decision-making capability.

Thus, a shareholder of an effective parent is not itself liable for the debts of the effective parent's effective subsidiary, unless that shareholder is itself an effective parent of the effective parent. Accordingly, a shareholder will not be personally liable for our debts or those of our effective subsidiaries unless such shareholder controls our business and the conditions set forth above are met.

In addition, an effective parent is secondarily liable for an effective subsidiary's debts if an effective subsidiary becomes insolvent or bankrupt resulting from the fault of an effective parent only when the effective parent has used the right to give binding instructions, knowing that the consequence of carrying out this action would be insolvency of this effective subsidiary. Shareholders of the effective subsidiary may claim compensation for the effective subsidiary's losses from the effective parent that caused the effective subsidiary to take any action or fail to take any action knowing that such action or failure to take action would result in losses.

Russian law also provides for other cases in which shareholders may be held liable to us.

Charter capital increase

We may increase our charter capital by:

 issuing additional shares, or

 increasing the nominal value of already issued shares.

A decision on any issuance of shares or securities convertible into shares by closed subscription, or an issuance by open subscription of common shares or securities convertible into common shares constituting more than 25% of the number of issued common shares, requires a three-quarters majority vote of a shareholders' meeting. A decision to increase the charter capital by increasing the nominal value of issued shares requires a majority vote of a shareholders' meeting. In addition, the issuance of shares above the number of authorized and non-issued shares provided in our charter necessitates a charter amendment, which requires a three-quarters majority vote of a shareholders' meeting.

The Joint-Stock Companies Law requires that the value of newly issued shares be determined by the board of directors based on their market value but not less than their nominal value, except in limited circumstances where: (1) existing shareholders exercise a pre-emptive right to purchase shares at not less than 90% of the price paid by third parties, or (2) fees of up to 10% are paid to intermediaries, in which case the fees paid may be deducted from the

price. The price may not be set at less than the nominal value of the shares. The board of directors shall value any in-kind contributions for new shares, based on the appraisal report of an independent appraiser.

Russian securities regulations set out detailed procedures for the issuance and registration of shares of a joint-stock company. These procedures require:

taking a decision on share placement and approving the resolution on share issuance;

Table of Contents

registration of a share issuance with the FFMS;

following the placement of the shares, registration and public disclosure of the results of the placement of shares; and

public disclosure of information relating to the share issuance.

Capital decrease; share buy-backs

The Joint-Stock Companies Law does not allow a company to reduce its charter capital below the minimum charter capital required by law, which is 100,000 rubles for an open joint-stock company. The Joint-Stock Companies Law and our charter require that any decision to reduce our charter capital, whether through a repurchase and cancellation of shares or a reduction in the nominal value of the shares, be made at a shareholders' meeting. Additionally, within three business days after taking the decision to reduce our charter capital, we must notify this decision to the authority which carries out state registration of legal entities and publish this decision twice with a monthly interval. Within 30 days of the latest of such publications, our creditors, whose claim rights had occurred prior to the publication, would then have the right to accelerate our indebtedness and to demand reimbursement of applicable damages.

The Joint-Stock Companies Law allows our shareholders or our board of directors to authorize the repurchase of our shares for consideration valued at up to 10% of Mechel's net assets. The repurchased shares must be resold at a value not less than a market value within one year of their repurchase or, failing that, the shareholders must decide to cancel such shares and decrease the charter capital. Repurchased shares do not bear voting rights.

The Joint-Stock Companies Law allows us to repurchase our shares only if:

our charter capital is paid in full;

we are not and would not become, insolvent as a result of the repurchase;

the value of our net assets is not less (and would not become less, as a result of the proposed repurchase) than the sum of our charter capital, the reserve fund and the difference between the liquidation value and par value of our issued and outstanding preferred shares;

we have repurchased all shares from shareholders having the right to demand repurchase of their shares in accordance with Russian law, as described immediately below; and

the charter capital has been decreased by acquiring a part of the shares with the view to reduce their total number, provided that following such decrease the charter capital has not become lower than the minimum amount of the charter capital set forth by the Joint-Stock Companies Law (which is equal to 100,000 rubles).

The Joint-Stock Companies Law and our charter provide that our shareholders may demand repurchase of all or some of their shares so long as the shareholder demanding repurchase voted against or did not participate in the voting on the decision approving any of the following actions:

reorganization;

conclusion of a major transaction, as defined under Russian law; or

amendment of our charter or approval of a restated version of our charter in a manner which restricts shareholders' rights.

We may spend up to 10% of our net assets calculated under Russian accounting standards on the date of the adoption of the decision which gives rise for a share redemption demanded by the shareholders. If the value of shares in respect of which shareholders have exercised their right to demand repurchase exceeds 10% of our net assets, we will repurchase shares from each such shareholder on a pro-rata basis.

Table of Contents

Registration and transfer of shares

Russian legislation requires that a joint-stock company maintain a register of its shareholders. Ownership of our shares is evidenced solely by entries made in such register. Any of our shareholders registered in a register may obtain an extract from our register certifying the number of shares that such shareholder holds. Since September 2, 2008, Registrar NIKoil Company (JSC) has maintained our shareholder register, replacing Regional Independent Registrar Agency OAO.

The purchase, sale or other transfer of shares is accomplished through the registration of such transfer in the shareholder register, or the registration of such transfer with a depository if shares are held and recorded by a depository. The registrar or depository may not require any documents in addition to those required by Russian legislation in order to transfer shares in the register or with a depository. Refusal to register the shares in the name of the transferee or, upon request of the beneficial holder, in the name of a nominee holder, is not allowed except in certain instances provided for by Russian legislation, and may be challenged in court.

Reserve fund

Russian legislation requires that each joint-stock company establish a reserve fund to be used only to cover the company's losses, redeem the company's bonds and repurchase the company's shares in cases when other funds are not available. Our charter provides for a reserve fund of 5% of our charter capital, funded through mandatory annual transfers of at least 5% of our statutory net profits until the reserve fund has reached the 5% requirement.

Disclosure of Information

Russian securities regulations require us to make the following periodic public disclosures and filings:

filing quarterly reports with the FFMS, MICEX and RTS containing information about us, our shareholders, registrar and depository, the structure of our management bodies, the members of the Board of Directors, management board and review commission, our branches and representative offices, our subsidiaries and affiliates, our shares, bank accounts and auditors, important developments during the reporting quarter, quarterly accounting reports prepared in accordance with Russian accounting standards, and other information about our financial and business activity;

disclosure of the aforementioned quarterly reports on our website at www.mechel.ru;

filing with the FFMS, MICEX and RTS and publishing any information concerning material facts and changes in our financial and business activity, including our reorganization, certain changes in the amount of our assets, decisions on share issuances, certain changes in ownership and shareholding as well as shareholder and management bodies resolutions;

disclosure of the aforementioned information concerning material facts in the newswire of authorized information agencies and on our website at www.mechel.ru;

disclosing information on various stages of securities placement, issuance and registration through publication of certain data as required by the securities regulations by means of publishing it in the newswire of authorized information agencies and on our website at www.mechel.ru, as well as by filing it with the FFMS, RTS and MICEX;

Edgar Filing: Mechel OAO - Form 20-F

disclosing our charter and internal corporate governance documents on our website and filing them with MICEX and RTS;

disclosing our annual report and annual financial statements prepared in accordance with Russian accounting standards on our website and filing them with MICEX and RTS;

filing with MICEX and RTS on a quarterly basis a list of our affiliated companies and individuals and disclosing such list and its amendments on our website at *www.mechel.ru*; and

Table of Contents

other information as required by applicable Russian securities legislation and the rules of MICEX and RTS.

General Meetings of Shareholders

Procedure

The powers of a shareholders' meeting are set forth in the Joint-Stock Companies Law and in our charter. A shareholders' meeting may not decide issues that are not included in the list of its competence by the Joint-Stock Companies Law and our charter. Among the issues which the shareholders have the exclusive power to decide are:

charter amendments;

reorganizations or liquidations;

election and early removal of the members of the board of directors;

determination of the number, nominal value and type of authorized shares and rights granted by such shares;

changes in the company's charter capital;

appointment and early removal of the members of our review commission and counting commission;

approval of our external auditor;

approval of certain interested party transactions (the value of which is 2% or more of the balance sheet value of the company's assets) and major transactions (the value of which is more than 50% of the balance sheet value of the company's assets);

distribution of profits and losses, including approval of dividends;

decisions on our participation in commercial or industrial groups or other associations of commercial entities;

redemption by the company of issued shares in cases provided for by the Joint-Stock Companies Law;

approval of certain internal documents regulating the activity of our governing bodies; and

other issues, as provided by the Joint-Stock Companies Law and our charter.

Voting at a shareholders' meeting is generally carried out on the principle of one vote per voting share, with the exception of the election of the board of directors, which is done through cumulative voting. Decisions are generally passed by a majority vote of the voting stock present at a shareholders' meeting. However, Russian law requires a three-quarters majority vote of the voting stock present at a shareholders' meeting to approve the following:

charter amendments;

reorganizations or liquidations;

major transactions involving assets in excess of 50% of the balance sheet value of the company's assets;

determination of the number, nominal value and category (type) of authorized shares and the rights granted by such shares;

repurchase by the company of its issued shares;

any issuance of shares or securities convertible into common shares by closed subscription;

Table of Contents

issuance by open subscription of common shares or securities convertible into common shares, in each case, constituting 25% or more of the number of issued and outstanding common shares; and

a decrease of charter capital by means of a change in the nominal value of shares.

The quorum requirement for our shareholders meeting is met if shareholders (or their representatives) accounting for more than 50% of the issued voting shares are present. If the quorum requirement is not met, another shareholders meeting with the same agenda may (and, in the case of an annual meeting, must) be scheduled and the quorum requirement is satisfied if shareholders (or their representatives) accounting for at least 30% of the issued voting shares are present at that meeting.

The annual shareholders meeting must be convened by the board of directors and be held between March 1 and June 30 of each year, and the agenda must include the following items:

election of the members of the board of directors and review commission;

approval of the annual report and annual financial statements, including the balance sheet and profit and loss statement;

approval of distribution of profits, including approval of annual dividends and losses, if any; and

appointment of an independent auditor.

A shareholder or group of shareholders owning in the aggregate at least 2% of the outstanding voting shares may introduce proposals for the agenda of the annual shareholders meeting and may nominate candidates to the board of directors, general director, the review commission and counting commission. Any agenda proposals or nominations must be provided to the company no later than 30 days after the preceding financial year ends.

Extraordinary shareholders meetings may be called either by the board of directors on its own initiative, or at the request of the review commission, the independent auditor of the statutory accounts or a shareholder or group of shareholders owning in the aggregate at least 10% of the issued voting shares as of the date of the request.

A general meeting of shareholders may be held in a form of a meeting or by an absentee ballot. The form of a meeting contemplates the adoption of resolutions by the shareholders meeting through the attendance of the shareholders or their authorized representatives for the purpose of discussing and voting on issues of the agenda, provided that if a ballot is mailed to shareholders for participation at a meeting convened in such form, the shareholders may complete and mail the ballot back to the company without personally attending the meeting. A shareholders meeting by absentee ballot contemplates the determination of shareholders opinions on issues on the agenda by means of a written poll.

The following issues cannot be decided by a shareholders meeting by absentee ballot:

election of directors;

election of the review commission;

approval of a company's independent auditor for statutory accounts; and

approval of the annual report and annual financial statements, including balance sheet, profit and loss statement and any distribution of profits and losses, including approval of annual dividends, if any.

Notice and participation

All shareholders entitled to participate in a shareholders' meeting must be notified of the meeting, whether the meeting is to be held in direct form or by absentee ballot, not less than 30 days prior to the date of the meeting, and such notification shall specify the agenda for the meeting or, if the company's charter determines it, by publishing a notice of the meeting in a printed publication. However, if it is an extraordinary shareholders' meeting to elect the board of directors or it is a general shareholders' meeting to elect the board of directors of a reorganized company, shareholders must be notified (by printed publication) at least 70 days

Table of Contents

prior to the date of the meeting. Under our charter, we may either provide notice by mail to our shareholders or publish a notice in *Rossiyskaya Gazeta*, an official newspaper founded by the Russian government. Only those items that were set out in the agenda may be voted upon at a shareholders' meeting.

The list of shareholders entitled to participate in a shareholders' meeting is compiled on the basis of the data in our shareholder register on the date established by the board of directors, which date may neither be earlier than the date of adoption of the board resolution to hold a shareholders' meeting nor more than 50 days before the date of the meeting (or, in the case of an extraordinary shareholders' meeting to elect the board of directors, not more than 85 days before the date of the meeting).

The right to participate in a shareholders' meeting may be exercised by a shareholder as follows:

by personally participating in the discussion of agenda items and voting thereon;

by sending an authorized representative to participate in the discussion of agenda items and to vote thereon;

by absentee ballot; or

by delegating the right to fill out the absentee ballot to an authorized representative.

Board of Directors

The Joint-Stock Companies Law and our charter provide that our entire board of directors is up for election at each annual shareholders' meeting and that our board of directors is elected through cumulative voting. Under cumulative voting, each shareholder has a number of votes equal to the number of voting shares held by such shareholder multiplied by the number of persons to be elected to our board of directors, and the shareholder may give all such votes to one candidate or spread them between two or more candidates. Before the expiration of their term, the members of the board of directors may be removed as a group at any time without cause by a majority vote of the voting shares at a shareholders' meeting.

The Joint-Stock Companies Law requires at least a five-member board of directors for all joint-stock companies, at least a seven-member board of directors for a joint-stock company with more than 1,000 holders of voting shares, and at least a nine-member board of directors for a joint-stock company with more than 10,000 holders of voting shares. Only natural persons (as opposed to legal entities) are entitled to sit on the board. Members of the board of directors are not required to be shareholders of the company. Members of the management board are not permitted to constitute more than 25% of the members of the board of directors. The actual number of directors is determined by the company's charter or decision of the shareholders' meeting. Our charter provides that our board of directors shall consist of nine members, and the majority of our directors shall be independent.

The Joint-Stock Companies Law prohibits the board of directors from acting on issues that fall within the exclusive competence of the shareholders' meeting. Our board of directors has the power to direct the general management of the company, and to decide the following issues:

determination of our business priorities and approving our annual and quarterly budget;

convening annual and extraordinary shareholders' meetings, except in certain circumstances specified in the Joint-Stock Companies Law;

approval of the agenda of the shareholders meeting and determination of the record date for shareholders entitled to participate in a shareholders meeting;

placement of our bonds and other securities, except in certain circumstances specified in the Joint-Stock Companies Law and our charter;

determination of the price of our property and of our securities to be placed or repurchased, as provided for by the Joint-Stock Companies Law;

Table of Contents

repurchase of our shares, bonds and other securities in certain cases provided for by the Joint-Stock Companies Law;

appointment of the general director and members of the management board, and early termination of their powers and the establishment of their compensation;

recommendation to the general shareholders' meeting on the amount of a dividend and the payment procedure thereof;

recommendation on the amount of remuneration and compensation to be paid to the members of our review commission and on the fees payable for the services of an independent auditor;

the use of our reserve fund and other funds;

the creation and liquidation of branches and representative offices;

approval of internal documents, except for those documents whose approval falls within the competence of the company's shareholders or general director or the management board;

approval of major and interested party transactions in the cases provided for by the Joint-Stock Companies Law;

increasing our charter capital by issuing additional shares within the limits of the authorized charter capital, except in certain circumstance specified in our charter;

approval of decisions on securities issuances and of the prospectus relating to such securities issuances, as well as of reports on the results of such securities issuances;

approval of our share registrar; and

other issues, as provided for by the Joint-Stock Companies Law and our charter.

Our charter generally requires a majority vote of the directors present for an action to pass, with the exception of actions for which Russian legislation requires a unanimous vote or a majority vote of the disinterested and independent directors, as described herein. A board meeting is considered duly assembled and legally competent to act when at least five directors, including at least one independent director, are present. In addition, our charter requires the presence of at least three quarters of the total number of directors, including at least one third of the total number of independent directors, for board meetings convened to make decisions on certain matters specified in our charter.

Management Board

In August 2007, an extraordinary shareholders' meeting approved the Bylaw on the collegial executive body (Management Board). Pursuant to the Bylaw, the management board engages in discussions regarding important corporate issues and makes recommendations to our board of directors. The management board operates on the basis of our charter and applicable internal regulations. The management board's size is defined by the board of directors, and it is comprised of senior management of Mechel and our subsidiaries, with each member of the management board elected by the board of directors. A meeting of the management board is quorate if at least half of its members participate in the meeting.

The management board decides on the following issues, among others:

developing and submitting to the board of directors plans and drafts regarding the development strategy of our businesses;

reporting to the board of directors on the realization of investment projects in the amount of more than \$30 million;

developing and introducing to the board of directors investment projects in the amount of more than \$50 million;

submitting to the board of directors proposals on bonds placement and acquisitions;

Table of Contents

submitting to the board of directors proposals on participation (obtaining or increasing participation) or giving up (reducing) our participation in other entities;

approving annual and long-term investment programs;

approving transactions related to disposals by the company of capital assets with a value of between 10% to 25% of the balance sheet assets of the company;

making decisions regarding the exercise of our rights as a shareholder or a participant of other entities;

making recommendations on certain matters relating to the management of our subsidiaries;

developing and establishing methods of compensation and monetary motivation for our employees; and

other issues related to our day-to-day business referred to the management board by its chairman, the board of directors or by a shareholder holding not less than 20% of our voting shares.

General Director

The general director (also referred to in this document as our Chief Executive Officer) is our sole executive body and manages our current operations and organizes the implementation of resolutions of our shareholders' meeting and the board of directors. The general director acts on our behalf without a power of attorney and has the following rights and responsibilities:

performing the routine management of our operations;

exercising the right of first signature on financial documents;

managing our property to provide for our current operations within the limits established by our charter and prevailing Russian legislation;

representing our interests both in Russia and abroad;

approving staff, executing labor contracts with our employees and rewarding and disciplining employees;

entering into transactions on our behalf;

issuing powers of attorney on our behalf;

opening and closing our bank accounts;

organizing our accounting and reporting process;

issuing orders and instructions binding on all our employees;

organizing the implementation of resolutions of our shareholders' meeting and our board of directors; and

performing other functions necessary to achieve our aims and to provide for our normal operations, in compliance with prevailing legislation and our charter, except for the functions laid upon our other management bodies by the Joint-Stock Companies Law and our charter.

The general director is appointed by the board of directors for a period of one year. The term of office runs from the time of his appointment until such time as a general director is appointed by the board of directors one year later. The general director may be re-appointed an unlimited number of times. If, for any reason, a new general director is not elected (e.g., no candidate is nominated within the periods and in the manner provided by our charter, all candidates withdraw their candidacies, no candidate receives the required number of votes, elections are not held due to a lack of quorum of the board of directors or for other reasons), the authority of the current general director shall be extended until such time as a new individual executive body is elected or re-elected.

Table of Contents

The general director may on his own initiative renounce his powers at any time by written notice to the board of directors. The authority of the general director may be terminated before the expiration of his term of office by a resolution of the board of directors on the following grounds:

failure to comply with the requirements of our charter, resolutions of the shareholders meeting or the board of directors or our internal documents;

in the cases stipulated by the employment agreement with the general director; and

in other events provided by current legislation.

Upon resolution of the shareholders meeting, the authority of the sole executive body may be vested in a commercial organization (a **managing organization**) or an individual entrepreneur (a **manager**) on a contractual basis. Under the Civil Code, if the authority of a company's sole executive body has been vested in a managing organization or a manager, the company exercises its legal rights and assumes its legal obligations through such managing organization or manager. A resolution to transfer the authority of a company's sole executive body to a managing organization or a manager shall be passed by the general meeting of shareholders only upon recommendation of the board of directors of the company.

Our general director is required under Russian law to disclose information on his holdings of our securities and on sales and/or purchases of our securities.

Role of the Review Commission

The review commission exercises control over our financial and business operations.

The review commission is elected by the shareholders meeting for a period of one year and consists of three persons. Shares owned by members of our board of directors or persons holding positions in our management bodies cannot participate in the voting, when members of the review commission are elected. The term of office of the review commission runs from the moment it is elected by the shareholders to the moment it is elected or re-elected by the next annual shareholders meeting. The authority of individual members or the whole review commission may be terminated before the expiration of the term of office thereof by a resolution of the shareholders meeting on the grounds and in compliance with the procedure stipulated by our internal documents. If the number of members of the review commission falls to less than half of the required membership thereof, the board of directors must convene an extraordinary shareholders meeting to elect a new review commission. The remaining members of the review commission continue to perform their functions until a new review commission is elected.

Both a shareholder and any person proposed by a shareholder may become a member of the review commission. Members of the review commission cannot simultaneously be members of the board of directors, be members of the liquidation commission, be the general director or be members of the management board.

The review commission elects its chairman and secretary from within its members.

Upon a request from the review commission, the general director and members of the board of directors, the management board and the liquidation commission must undertake to make available documents pertaining to our financial and business operations.

The review commission is entitled to request that an extraordinary shareholders meeting be convened in accordance with the procedure provided by our charter.

On the basis of the results of its examination of our financial and business operations, the review commission prepares opinions, which contain the following:

confirmation of the reliability of the data contained in our reports and other financial documents; and

information on any identified cases of violations of accounting and reporting procedures stipulated by Russian legislation and violations of Russian legislation identified in financial and business operations.

Table of Contents

The board of directors determines remuneration and compensation of expenses to the members of the review commission.

Interested Party Transactions

Under the Joint-Stock Companies Law, certain transactions defined as interested party transactions require approval by disinterested directors or shareholders of the company. Interested party transactions include transactions involving a member of the board of directors or member of any executive body of the company, any person that owns, together with its affiliates, at least 20% of a company's issued voting stock or any person who is able to direct the actions of the company, if that person, and/or that person's spouse, parents, children, adoptive parents or children, brothers or sisters or affiliates, is/are:

a party to, or beneficiary of, a transaction with the company, whether directly or as a representative or intermediary;

the owner (the various or in the aggregate) of at least 20% of the issued voting shares of a legal entity that is a party to, or beneficiary of, a transaction with the company, whether directly or as a representative or intermediary; or

a member of the board of directors or a member of any management body of a company that is a party to, or beneficiary of, a transaction with the company, whether directly or as a representative or intermediary, or a member of any management body of a management organization of such a company.

The Joint-Stock Companies Law requires that an interested party transaction by a company with more than 1,000 shareholders be approved by a majority vote of the independent directors of the company who are not interested in the transaction. An independent director is a person who is not, and within the year preceding the decision was not, the general director, a member of any executive body or an affiliate of the company and whose sole nexus to the company is in the capacity of a member of the board of directors. Additionally, such person's spouse, parents, children, adoptive parents or children, brothers or sisters may not occupy positions in the executive bodies of the company or be its general director. For companies with 1,000 or fewer shareholders, an interested party transaction must be approved by a majority vote of the directors who are not interested in the transaction if the number of these directors is sufficient to constitute a quorum.

Approval by a majority of shareholders who are not interested in the transaction is required if:

the value of such transaction or a number of interrelated transactions is 2% or more of the balance sheet value of the company's assets determined under Russian accounting standards;

the transaction or a number of interrelated transactions involves the issuance, by subscription, of common shares or securities convertible into common shares, or secondary market sale of such securities, in an amount exceeding 2% of the company's issued common shares and common shares into which issued convertible securities may be converted;

the number of directors who are not interested in the transaction is not sufficient to constitute a quorum; or

all the members of the board of directors of the company are interested parties, or none of them is an independent director.

Approval by a majority of shareholders who are not interested in the transaction may not be required for an interested party transaction if such transaction is substantially similar to transactions concluded by the company and the interested party in the ordinary course of business before such party became an interested party with respect to the transaction.

The approval of interested party transactions is not required in the following instances:

the company has only one shareholder that simultaneously performs the functions of the executive body of the company;

all shareholders of the company are deemed interested in such transactions;

Table of Contents

the transactions arise from the shareholders executing their pre-emptive rights to purchase newly issued shares of the company;

the transactions arise from the repurchase, whether mandatory or not, by the company of the issued shares;

the company is merging with or into another company; or

the company is required by federal legislation to enter into the transaction, and settlements under such transaction are made pursuant to fixed rate schedules and prices established by appropriate state authorities.

For information on certain risks relating to interested party transactions see **Item 3. Key Information Risk Factors Risks Relating to Our Business and Industry**. In the event that the minority shareholders of our subsidiaries were to successfully challenge past interested party transactions or do not approve interested party transactions in the future, we could be limited in our operational flexibility.

Major Transactions

The Joint-Stock Companies Law defines a major transaction as a transaction, or a number of related transactions, involving the acquisition or disposal, or a possibility of disposal (whether directly or indirectly), of property having a value of 25% or more of the balance sheet value of the assets of a company as determined under Russian accounting standards as of the latest reporting date preceding the transaction, with the exception of transactions completed in the ordinary course of business or transactions involving the placement of common shares or securities convertible into common shares by means of subscription (disposal). Major transactions involving assets ranging from 25% to 50% of the balance sheet value of the assets of a company require unanimous approval by all members of the board of directors or, failing to receive such approval, a majority vote of the voting stock at a shareholders' meeting. Major transactions involving assets in excess of 50% of the balance sheet value of the assets of a company require a three-quarters majority vote of the voting stock held by shareholders present at the general shareholders' meeting.

For information on our controlling shareholder's potential ability to approve major transactions see **Item 3. Key Information Risk Factors Risks Relating to Our Business and Industry**. The concentration of our shares with our controlling shareholder will limit your ability to influence corporate matters.

Change in Control

Anti-takeover protection

Russian legislation requires the following:

A person intending to acquire more than 30% of an open joint-stock company's common shares and voting preferred shares (including, for such purposes, shares already owned by such person and its affiliates), will be entitled to make a public tender offer to other holders of such shares pursuant to the requirements of the Joint Stock Companies Law.

A person that has acquired more than 30% of an open joint-stock company's common shares and voting preferred shares (including shares already owned by such person and its affiliates, but excluding shares that were acquired pursuant to previous voluntary or mandatory offers in compliance with the requirements of the Joint Stock Companies Law) will be required to make, within 35 days of acquiring such shares, a public tender offer for other shares of the same class and for securities convertible into such shares, at a price which is not

less than the price determined based on a weighted market price of the shares during trading sessions on a stock exchange for the six months preceding the date when a public tender offer was sent, or at a price not less than the market price, which must be determined by an independent appraiser if the shares have an insufficient or non-existent trading history. From the moment of acquisition of more than 30% of the shares until the moment the of sending of an offer to the company, the person making the offer and its affiliates will be able to vote only 30% of the shares of the company (regardless of the size of their actual holdings). These rules are also applied (or

Table of Contents

reapplied) to acquisitions resulting in a person or a group of persons owning more than 50% and 75% of a company's outstanding common shares and voting preferred shares.

A person that, as a result of such a voluntary or mandatory offer, becomes (individually or counting the shares held by its affiliates) the owner of more than 95% of the company's common shares and voting preferred shares, must buy out the remaining shares of the company as well as other securities convertible into such shares upon request of the holders of such shares or other securities, and may require such holders to sell such shares and other securities, at a price not less than the prices of the preceding acquisition by the offeror. The offeror is entitled to require the holders of the remaining shares of the company, as well as other securities convertible into such shares, to sell such shares and other securities, provided that the offeror acquired not less than 10% of the total number of shares of the company as a result of acceptance by other shareholders of the voluntary or mandatory tender offer as described above.

An offer of the kind described in any of the preceding three paragraphs must be accompanied by a bank guarantee of payment. If securities are listed on a stock exchange, prior notice of the offer must be filed with the FFMS; otherwise, notice must be filed with the FFMS no later than the date of the offer. The FFMS may order amendments to the terms of the offer (including price) in order to bring them into compliance with the requirements of the current legislation.

Once such an offer has been made, competing offers for the same securities can be made by third parties and, in certain circumstances, acceptance of the initial offer may be withdrawn by the security holders who choose to accept such competing offer. From the making of such an offer until 20 days after its expiry (which period may in certain cases exceed 100 days) the company's shareholders' meeting will have the sole power to make decisions on charter capital increase by way of issuance of additional shares, issuance of securities convertible into shares, including options of an open joint-stock company, approval of certain transactions or a number of related transactions, involving the acquisition or disposal, or a possibility of disposal (whether directly or indirectly), of property having a value of 10% or more of the balance sheet value of the assets of a company as determined under Russian accounting standards as of the latest reporting date preceding the transaction, with the exception of transactions completed in the ordinary course of business, and on certain other significant matters.

The above rule may be supplemented through rulemaking by the FFMS, which may result in a wider, narrower or more specific interpretation of these rules by the government and judicial authorities, as well as by market participants.

Approval of the Russian Federal Antimonopoly Service

Pursuant to the Competition Law, acquisitions of voting shares of a joint-stock company, involving companies with a combined value of assets or annual revenues, exceeding a certain threshold under Russian accounting standards, or companies registered as having more than a 35% share of a certain commodity market, and which would result in a shareholder (or a group of shareholders defined under Russian law) holding more than 25%, 50% or 75% of the voting capital stock of such company, or in a transfer between such companies of assets or rights to assets, the value of which exceeds a certain amount, or obtaining rights to determine the conditions of business activity of an entity or to exercise the authorities of its executive body must be approved in advance by the FAS. Such transactions executed between members of a group of companies may require only a subsequent notification to the FAS if prior notification about the members of the group of companies has been filed with the FAS and the information contained in this notification is still accurate as of the date of the relevant transaction and had not been changed within 30 days from the date of group's disclosure and prior to the date of the transaction's settlement. See Item 4. Information on the Company Regulatory Matters - Russian Antimonopoly Regulation.

Notification of foreign ownership

Foreign individuals and foreign companies that acquire shares in a Russian joint- stock company, regardless of whether they are registered with the Russian tax authorities, may need to notify the Russian tax

Table of Contents

authorities within one month following such acquisition. However, the procedure for notifying the Russian tax authorities by foreign individuals or companies that are not registered with such tax authorities at the time of their share acquisitions remains unclear.

Under the Strategic Industries Law, any foreign investor or group of companies is required to notify Russian authorities on its acquisition of 5% or more of the charter capital of a Strategic Company.

The FAS is the federal executive authority for execution of control over making foreign investments in the Russian Federation. See Item 3. Key Information Risk Factors Risks Relating to the Russian Federation Legal risks and uncertainties Expansion of limitations on foreign investment in strategic sectors could affect our ability to attract and/or retain foreign investments and Item 4. Information on the Company Regulatory Matters The Strategic Industries Law.

Material Contracts

None.

Exchange Controls

The Federal Law On Currency Regulation and Currency Control, which came into effect as of June 18, 2004, sets forth certain restrictions on settlements between residents of Russia with respect to transactions involving foreign securities (including ADSs), including requirements for settlement in Russian rubles.

Repatriation of Export Proceeds

Russian companies must repatriate 100% of their receivables from the export of goods and services (with a limited number of exceptions concerning, in particular, certain types of secured financing) within the time frame provided under the respective agreement.

Restrictions on Remittance to Non-residents

The Federal Law On Foreign Investments in the Russian Federation, dated July 9, 1999, as amended, specifically guarantees foreign investors the right to repatriate their earnings from Russian investments. However, the evolving Russian exchange control regime may affect investors' ability to do so. Ruble dividends on shares may be paid to the depository or its nominee and converted into U.S. dollars by the depository for distribution to owners of ADSs without restriction. In addition, ADSs may be sold by non-residents of Russia for U.S. dollars outside Russia without regard to Russian currency control laws so long as the buyer is not a Russian resident for currency control purposes.

Taxation

The following discussion is not intended as tax advice to any particular investor. No opinion of counsel will be issued with respect to the following discussion and, therefore, such discussion is not based on an opinion of counsel. It is also not a complete analysis or listing of all potential U.S. federal or Russian income and withholding tax consequences of ownership of shares or ADSs. We urge such holders to consult their tax advisers regarding the specific U.S. federal, state and local and Russian tax consequences of the ownership and disposition of the shares or ADSs, including their eligibility for the benefits of a double tax treaty between the Russian Federation and their country of residence, in light of their particular facts and circumstances, as well as the applicability and effect of state, regional and local tax laws and foreign tax law.

Russian Income and Withholding Tax Considerations

The following is a summary of certain Russian tax considerations relevant to payments to Russian resident and non-resident holders of the shares and the ADSs and to the purchase, ownership and disposition of the shares and the ADSs by Russian resident and non-resident holders. This summary is based on the laws of Russia in effect as of the date of this document. The discussion with respect to Russian legislation is based

Table of Contents

on our understanding of current Russian law and tax rules, which are subject to frequent change and varying interpretations.

This summary does not seek to address the applicability of, and procedures in relation to, taxes levied by the regions, municipalities or other non-federal level authorities of the Russian Federation. Nor does the summary seek to address the availability of double tax treaty relief, and it should be noted that there might be practical difficulties involved in claiming relief under an applicable double tax treaty. You should consult your own professional advisors regarding the tax consequences of investing in the shares and ADSs. No representations with respect to the Russian tax consequences to any particular holder are made hereby.

The Russian tax rules applicable to ADSs are characterized by uncertainties and by an absence of special provisions with respect to transactions involving ADSs. Both the substantive provisions of Russian tax law and the interpretation and application of those provisions by the Russian authorities may be subject to more rapid and unpredictable change than in a jurisdiction with more developed capital markets and a more developed taxation system. In particular, the interpretation and application of such provisions will in practice rest substantially with local tax inspectors.

For the purposes of this summary, a *Russian resident holder* means: (1) an individual holder of the shares and ADSs, actually present in the Russian Federation for 183 days or more in 12 consecutive months; or (2) an organization, organized under Russian law; or (3) an organization, organized under a foreign law, that holds and disposes of the shares and ADSs through its permanent establishment in Russia. Individual presence in Russia is not considered interrupted if an individual departs for short periods (less than six months) for the purpose of medical treatment or education.

For the purposes of this summary, a *non-resident holder* is a holder of the shares or ADSs which is not qualified to be a Russian resident holder as defined in the previous paragraph.

Taxation of acquisition of the shares and ADSs

No Russian tax implications should arise for holders of the shares and ADSs upon purchase of the shares and ADSs. However, under the certain conditions a taxable material gain may arise for individuals if the shares and ADSs are purchased at a price below the deemed market value.

Taxation of dividends

A Russian company that pays dividends is generally obliged to act as a tax agent to withhold tax on the dividends and remit the amount of tax due to the Russian Federation state budget. However, the applicable withholding tax rate will depend on the status of the dividend's recipient.

Russian resident holders

Shares

Dividends paid to a Russian resident holder of the shares that is a Russian organization or an individual will be generally subject to Russian withholding tax at the rate of 9%. Dividends received by Russian organizations are subject to withholding tax at the rate of 0% provided that the recipient organization constantly owns for a period of 365 calendar days or more at least 50% of participation shares in the share capital of the paying organization or share depositary receipts qualifying for dividends equal to at least 50% of the total amount of dividends paid by the organization, as well as the acquisition cost of these shares exceeds 500 million rubles (the latter condition expired on January 1, 2011 and does not apply to dividends accrued for 2010 and subsequent periods). However it is difficult to

predict how the Russian tax authorities may interpret the conditions listed above. Therefore, there can be no assurance that the 0% withholding tax rate will apply.

The effective rate of this tax may be lower than 9% owing to the fact that generally this tax should be calculated by multiplying the basic tax rate (9%) by the difference between (i) the dividends to be distributed by us to our shareholders (other than to non-resident companies and non-resident individuals), and

Table of Contents

(ii) dividends collected by us in the current and preceding tax periods from other Russian persons (except for dividends which are taxable at the rate of 0% under the current Russian tax law).

According to clarifications issued by the Russian tax authorities, it may be possible to claim that the reduced withholding tax rate should apply to dividends paid to a Russian permanent establishment of a foreign organization, based on non-discrimination provisions of a double tax treaty between Russia and the country of tax residency of the respective foreign organization. However, as the Russian Tax Code does not specifically provide for the application of the reduced tax rate in such situations and the application of treaty-based non-discrimination cases is still rare in Russian tax practice, no assurance can be given that any claims for application of the reduced tax rate would not be challenged by the Russian tax authorities, hence it is likely that 15% withholding tax rate would be applied by us.

ADSs

There are uncertainties in relation to withholding tax on dividends payable to Russian resident holders of ADSs primarily because the taxation of dividends payable under ADSs is not specifically addressed under Russian tax law. In the absence of any official interpretative guidance and, as the depository (and not the holders of the ADSs) is the legal holder of shares under Russian law, we will be likely to withhold tax at a domestic rate of 15% applicable to dividends payable to non-resident holders (as described below). Upon receiving dividends, Russian holders which are organizations may be required to pay additional Russian profits tax at the rate of 9% (the rate applied to dividends received from non-residents) or 20% (if the income received will not be recognized as dividends) while Russian holders who are individuals may be required to pay Russian personal income tax at the rate of 9% or 13% (the higher rate applies if the income received will not be recognized as a dividend for Russian tax purposes). There is also no established procedure providing for the refund of tax withheld from dividends payable through the depository to Russian resident holders of ADSs. Accordingly, Russian residents are urged to consult their own tax advisors regarding the tax treatment of the purchase, ownership and disposition of the ADSs.

*Non-resident holders***Shares**

Dividends paid to a non-resident holder of shares will generally be subject to Russian withholding tax, which we will withhold. Under Russian domestic law dividends paid to a non-resident holder, which is an organization or individual will be subject to Russian withholding tax at a rate of 15%. Withholding tax on dividends may be generally reduced under the terms of a double tax treaty between the Russian Federation and the country of tax treaty residence of a non-resident holder of the shares.

ADSs

Comments provided in the previous section (see *Taxation of dividends Non-resident holders Shares*) are also applicable to ADSs. Notwithstanding the foregoing, treaty relief for dividends received may not be available to non-resident holders of ADSs. The Ministry of Finance of the Russian Federation repeatedly expressed an opinion in their private responses that depository receipt holders (rather than the depository) should be treated as the beneficial owners of dividends for the purposes of the double tax treaty provisions applicable to taxation of dividend income from the underlying shares, provided that the tax residencies of the depository receipt holders are duly confirmed. However, in the absence of any specific provisions in Russian tax legislation with respect to taxation of dividends attributable to ADS holders, it is unclear how the Russian tax authorities and courts would ultimately treat the ADS holders in this regard. Moreover, from a practical perspective, it may not be possible for the depository to collect residence confirmations from all ADS holders and to submit such information to us and, in addition, we may be unaware of the exact amount of income payable to each particular holder.

Although non-resident holders of ADSs may apply for a refund of a portion of the tax withheld under an applicable tax treaty, the procedure to do so may be time-consuming and no assurance can be given that the Russian tax authorities will grant a refund. See Tax treaty procedures below.

Table of Contents

The following should be noted with respect to individuals who are non-resident holders of ADSs. We will not be able to act as a tax agent for these individuals and will not be able to withhold personal income tax with respect to such dividend payments. We may also be obligated to withhold income tax at the rate of 15% from dividend payments made to the depository. In practice, it may be impossible to apply a beneficial withholding tax rate in advance with respect to payments made in favor of individuals, as documentation is to be first provided to the tax authorities to obtain their approval for the double tax treaty relief. Individuals who are non-resident holders of ADSs will then be obliged to submit a personal tax return to the Russian tax authorities. When submitting the tax return, individuals may claim an application of the reduced rates of withholding tax established by the respective international double tax treaties, provided that the procedures described in Tax treaty procedures are complied with. Obtaining the respective approvals from the tax authorities may be time-consuming and burdensome. In practice, the tax authorities may not take into account the 15% tax withheld from payment of dividends to the depository, as the tax authorities are unlikely to treat the 15% withholding tax as a tax liability of individual holders. Therefore, it is possible that non-resident holders may be subject to up to a 45% effective tax on dividends accrued on shares held on deposit, i.e. 15% income tax withheld by us plus 30% Russian personal income tax payable on the self-assessment basis.

The dividends taxation rate may be reduced to 5% or 10% under the United States-Russia income tax treaty for U.S. Non-Resident holders; a 10% rate applies to dividends paid to U.S. holders owning less than 10% of the entity's outstanding shares and 5% for U.S. holders, which are legal entities, owning 10% or more of the entity's outstanding shares. Under current regulations, authorization from the Russian tax authorities is not required to allow us to withhold at reduced rates under applicable double tax treaties provided that all other requirements are met. See Tax treaty procedures.

If a U.S. Non-Resident holder does not provide to us appropriate evidence of U.S. residency before the dividend payment date, we are required to withhold tax at the full rate. In this case, U.S. holders qualifying for a reduced rate under the United States-Russia income tax treaty may claim a refund from the Russian tax authorities within three years. There is significant uncertainty regarding the availability and timing of such refunds.

Taxation of capital gains

The following sections summarize the taxation of capital gains in respect of the disposition of the shares and ADSs.

Russian resident holders

As the Russian legislation related to taxation of capital gains derived by Russian resident holders (including organizations and individuals) in connection with ADSs is not entirely clear, we urge Russian residents to consult their own tax advisors regarding the tax treatment of the purchase, ownership and disposition of ADSs.

Organizations

Capital gains arising from the sale of the shares and ADSs by a Russian resident holder that is an organization will be taxable at the regular Russian corporate income tax rate of 20%. Russian tax legislation contains a requirement that a profit arising from activities connected with securities quoted on a stock exchange must be calculated and accounted for separately from a profit from activities connected with securities that are not quoted on a stock exchange and from other profits. Therefore, Russian resident holders may be able to apply losses arising in respect of the listed shares and the ADSs to offset capital gains, or as a carry-forward amount to offset future capital gains, from the sale, exchange or other disposition of securities quoted on a stock exchange and, in respect of the non-listed ADSs, from the sale, exchange or other disposition of securities not quoted on a stock exchange. Special tax rules apply to Russian organizations that hold a broker and/or dealer license.

The Russian Tax Code also establishes special rules for the calculation of the tax base for the purposes of transactions with securities.

Table of Contents

Individuals

Capital gains arising from the sale, exchange or other disposition of the shares and ADSs by individuals who are Russian resident holders must be declared on the holder's tax return and are subject to personal income tax at a rate of 13%.

The income in respect of sale of the shares or the ADSs by an individual is calculated as sale proceeds less documented expenses related to the purchase of these securities (including cost of securities and expenses associated with purchase, safe-keeping and sale of these securities).

Under Russian law, the acquisition value can be deducted at the source of the payment, if the sale was made by a holder through a professional trustee, dealer or broker that is a Russian organization or a foreign company with a permanent establishment in Russia. This professional trustee, dealer or broker should also act as a tax agent and withhold the applicable tax. Such a tax agent will be required to report to the Russian tax authorities the amount of income realized by the individual and tax withheld upon the sale of the shares and ADSs not later than April 1 of the year following the reporting year.

Non-resident holders

Organizations

Capital gains arising from the sale, exchange or other disposition of the shares and ADSs by organizations that are non-resident holders should not be subject to tax in Russia if immovable property located in Russia constitutes 50% or less of our assets. If more than 50% of our assets were to consist of immovable property located in Russia, organizations that are non-resident holders of the shares and ADSs should be subject (except as described below) to a 20% withholding tax on the gross proceeds from sale, exchange or other disposition of the shares and ADSs or 20% withholding tax on the difference between the sales, exchange or other disposition price and the acquisition costs of the shares and ADSs.

However, it should be noted that the determination of whether more than 50% of our assets consist of immovable property located in Russia is inherently factual and is made on an on-going basis, and the relevant Russian legislation and regulations in this respect are not entirely clear. Hence, there can be no assurance that immovable property owned by us and located in Russia will not constitute more than 50% of the company's assets as at the date of the sale of shares and ADSs by non-residents. Certain international double tax treaties may provide for protection from the Russian taxation in such instances.

Where the shares and ADSs are sold by organizations to persons other than a Russian company or a foreign company with a registered permanent establishment in Russia, even if the resulting capital gain is considered taxable in Russia, there is currently no mechanism under which the purchaser will be able to withhold the tax and remit it to the Russian budget.

Individuals

The taxation of the income of non-resident individuals depends on whether the income is received from Russian or non-Russian sources. Russian tax law considers the place of sale as an indicator of source. Accordingly, the sale of the shares and ADSs outside of Russia by individuals who are non-resident holders should not be considered Russian source income and, therefore, should not be taxable in Russia. However the Russian tax law gives no clear indication as to how the place of sale of the shares and ADSs should be defined in this respect. Therefore, the Russian tax authorities may have a certain amount of flexibility in concluding whether a transaction is within Russia or outside of

Russia.

The sale, exchange or other disposal of the shares and the ADSs by non-resident holders in Russia will be considered Russian source income and will be subject to tax at the rate of 30% on the difference between the sales price and the acquisition value of such shares and ADSs as well as other documented expenses, such as depositary expenses and broker fees, among others. Under Russian law, the acquisition value can only be deducted at the source of the payment if the sale was made by a non-resident holder through a professional trust manager, dealer or broker that is a Russian organization or a foreign company with a permanent

Table of Contents

establishment in Russia. Such professional trust manager, dealer or broker should also act as a tax agent and withhold the applicable tax. Such a tax agent will be required to report to the Russian tax authorities the amount of income realized by the non-resident individual and tax withheld upon the sale of the shares and ADSs not later than on April 1 of the year following the reporting year.

Otherwise, if the sale is made to other organizations and individuals, generally no withholding needs to be made and the non-resident holder will have an obligation to file a tax return, report his realized income and apply for a deduction of acquisition expenses (which includes filing of support documentation).

Although Russian tax law imposes this responsibility only on professional trust manager, brokers or dealers, in practice, the tax authorities may require Russian organizations or foreign companies with a permanent establishment in Russia that are not professional trust manager, dealers or brokers to act as tax agents and withhold the applicable tax when purchasing securities from non-resident individuals.

Regardless of the residence of the purchaser, a U.S. holder which is a legal entity should not be subject to any Russian income or withholding taxes in connection with the sale, exchange or other disposition of ADSs if immovable property constitutes 50% or less of our assets or if ADSs are sold via foreign exchanges where they are legally circulated.

In some circumstances, a non-resident holder may be exempt from Russian personal income tax on the sale, exchange or other disposition of the shares and ADSs under the terms of a double tax treaty between the Russian Federation and the country of residence of the non-resident holder. Under the United States-Russia income tax treaty, capital gains from the sale of the shares and/or ADSs by U.S. holders should be relieved from taxation in Russia, unless 50% or more of our assets (as the term *fixed assets* is used in the Russian version of the United States-Russia Tax Treaty) were to consist of immovable property located in Russia. If this 50% threshold is not met, individuals who are U.S. holders may seek to obtain the benefit of the United States-Russia Tax Treaty in relation to capital gains resulting from the sale, exchange or other disposition of the shares and/or ADSs. Regardless of the residence of the purchaser, a U.S. holder which is a legal entity should not be subject to any Russian income or withholding taxes in connection with the sale, exchange or other disposition of ADSs if immovable property constitutes 50% or less of our assets or if ADSs are sold via foreign exchanges where they are legally circulated.

In order to apply the provisions of relevant double tax treaties, the individual holders should receive clearance from the Russian tax authorities as described below. See *Tax treaty procedures* below.

Tax treaty procedures

The Russian Tax Code does not contain a requirement that a non-resident holder that is an organization must obtain tax treaty clearance from the Russian tax authorities prior to receiving any income in order to qualify for benefits under an applicable tax treaty. However, a non-resident organization seeking to obtain relief from Russian withholding tax under a tax treaty must provide to a tax agent (i.e. the entity paying income to a non-resident) a confirmation of its tax treaty residence that complies with the applicable requirements in advance of receiving the relevant income.

In accordance with the Russian Tax Code, a non-resident holder who is an individual must present to the tax authorities a document confirming his residency in his home country and also other supporting documentation including a statement confirming the income received and the tax paid offshore, confirmed by the foreign tax authorities. Technically, such a requirement means that an individual cannot rely on the tax treaty until he or she pays the tax in the jurisdiction of his or her residence. Therefore advance relief from withholding taxes for individuals will generally be impossible as it is very unlikely that the supporting documentation for the treaty relief can be provided to

the tax authorities and approval from the latter obtained before the year end. A non-resident holder who is an individual may apply for treaty-based benefits within one year following the end of the tax period in which the relevant income was received.

If a non-resident holder that is an organization does not obtain double tax treaty relief at the time that income or gains are realized and tax is withheld by a Russian tax agent, the non-resident holder may apply for a refund within three years from the end of the tax period (a calendar year) in which the tax was withheld. To

Table of Contents

process a claim for a refund, the Russian tax authorities require: (1) a confirmation of the tax treaty residence of the non-resident at the time the income was paid, (2) an application for the refund of the tax withheld in a format provided by the Russian tax authorities, and (3) copies of the relevant contracts under which the foreign entity received income as well as payment documents confirming the payment of the tax withheld to the Russian budget (Form 1012DT for dividends and interest and Form 1011DT for other income are designed by the Russian tax authorities to combine requirements (i) and (ii) specified above and recommended for application). The Russian tax authorities may require a Russian translation of the above documents if they are prepared in a foreign language. The refund of the tax withheld should be granted within one month of the filing of the above set of documents with the Russian tax authorities. However, procedures for processing such claims have not been clearly established and there is significant uncertainty regarding the availability and timing of such refunds.

The procedures referred to above may be more complicated with respect to ADSs, because Russian tax law does not specifically address taxation and tax treaty procedures for dividends payable under ADSs. Thus, no assurance can be given that we will be able to apply the respective double tax treaties when paying dividends to non-resident holders.

A resident of the United States who is fully eligible for benefits under the United States-Russia income tax treaty is referred to in this Russian Income and Withholding Tax Considerations section as a U.S. holder. Subject to certain provisions of the United States-Russia income tax treaty relating to limitations on benefits, a person generally will be a resident of the United States for treaty purposes and entitled to treaty benefits if such person is:

liable, under the laws of the United States, for U.S. federal income tax (other than taxes in respect only of income from sources in the United States or capital situated therein) by reason of the holder's domicile, residence, citizenship, place of incorporation, or any other similar criterion (and, for income derived by a partnership, trust or estate, residence is determined in accordance with the residence of the person liable to tax with respect to such income); and

not also a resident of the Russian Federation for purposes of the United States-Russia income tax treaty.

The benefits under the United States-Russia income tax treaty discussed in this document generally are not available to United States persons who hold shares or ADSs in connection with the conduct of a business in the Russian Federation through a permanent establishment as defined in the United States-Russia income tax treaty. Subject to certain exceptions, a United States person's permanent establishment under the United States-Russia income tax treaty is a fixed place of business through which such person carries on business activities in the Russian Federation (generally including, but not limited to, a place of management, a branch, an office and a factory). Under certain circumstances, a United States person may be deemed to have a permanent establishment in the Russian Federation as a result of activities carried on in the Russian Federation through agents of the United States person. This summary does not address the treatment of those holders.

United States-Russia income tax treaty procedures

Under current rules, to claim the benefit of a reduced rate of withholding under the United States-Russia income tax treaty, a non-resident generally must provide official certification from the U.S. tax authorities of eligibility for the treaty benefits in the manner required by Russian law.

A U.S. holder may obtain the appropriate certification by mailing completed forms, together with the holder's name, taxpayer identification number, the tax period for which certification is required, and other applicable information, to the U.S. Internal Revenue Service (the **IRS**). The procedures for obtaining certification are described in greater detail in the instructions to IRS Form 8802. As obtaining the required certification from the IRS may take at least six to eight weeks, U.S. holders should apply for such certification as soon as possible.

If tax is withheld by a Russian resident on dividends or other amounts at a rate different from that provided in the tax treaty, a U.S. holder may apply for a tax refund by filing a package of documents with the Russian local tax inspectorate to which the withholding tax was remitted within three years from the

Table of Contents

withholding date for U.S. holders which are legal entities, and within one year from the withholding date for individual U.S. holders. The package should include confirmations of residence of the foreign holder (IRS Form 6166), a copy of the agreement or other documents substantiating the payment of income, documents confirming the beneficial ownership of the dividends recipient and the transfer of tax to the budget. Under the provisions of the Tax Code the refund of the tax should be effected within one month after the submission of the documents. However, procedures for processing such claims have not been clearly established, and there is significant uncertainty regarding the availability and timing of such refunds.

Neither the depository nor we will have any obligation to assist a U.S. holder of shares or ADSs with the completion and filing of any tax forms.

U.S. Federal Income Tax Considerations

The following is a summary of material U.S. federal income tax consequences of the purchase, ownership and disposition of shares or ADSs by a U.S. Holder. Solely for purposes of the U.S. Federal Income Tax Considerations section, a U.S. Holder is a beneficial owner of shares or ADSs that is, for U.S. federal income tax purposes: (1) an individual who is a citizen or resident of the United States, (2) a corporation created or organized in or under the laws of the United States, any state thereof or the District of Columbia, (3) an estate the income of which is subject to U.S. federal income tax regardless of its source, or (4) a trust, if a U.S. court can exercise primary supervision over the administration of the trust and one or more United States persons can control all substantial trust decisions, or if the trust has a valid election in place to be treated as a United States person.

If a partnership (including any entity treated as a partnership for U.S. federal income tax purposes) is a beneficial owner of shares or ADSs, the U.S. federal income tax treatment of a partner in the partnership will generally depend on the status of the partner and the activities of the partnership. A partner of a partnership holding shares or ADSs should consult its tax adviser regarding the associated tax consequences.

This summary does not discuss all aspects of U.S. federal income taxation that may be relevant to investors in light of their particular circumstances, such as investors subject to special tax rules (including, without limitation: (i) financial institutions; (ii) insurance companies; (iii) dealers in stocks, securities, or currencies or notional principal contracts; (iv) regulated investment companies; (v) real estate investment trusts; (vi) tax-exempt organizations; (vii) partnerships, pass-through entities, or persons that hold shares or ADSs through pass-through entities; (viii) holders that are not U.S. Holders; (ix) holders that own (directly, indirectly or constructively) 10% or more of our voting stock; (x) investors that hold shares or ADSs as part of a straddle, hedge, conversion, constructive sale or other integrated transaction for U.S. federal income tax purposes; (xi) investors that have a functional currency other than the U.S. dollar and (xii) U.S. expatriates and former long-term residents of the United States), all of whom may be subject to tax rules that differ significantly from those summarized below. This summary does not address tax consequences applicable to holders of equity interests in a holder of the shares or ADSs, U.S. federal estate, gift or alternative minimum tax considerations, or non-U.S., state or local tax considerations. This summary only addresses investors that will acquire shares or ADSs in the offering, and it assumes that investors will hold their shares or ADSs as capital assets for U.S. federal income tax purposes (generally, property held for investment).

U.S. Holders of ADSs should be treated for U.S. federal income tax purposes as owners of the underlying shares represented by those ADSs. Accordingly, except as noted, the U.S. federal income tax consequences discussed below should apply equally to U.S. Holders of ADSs and shares.

This summary is based upon current U.S. federal income tax law, including the U.S. Internal Revenue Code of 1986 (the **Code**), its legislative history, existing, temporary and proposed regulations thereunder, published rulings and court decisions, all of which are subject to differing interpretation or change (possibly with retroactive effect), and the

United States-Russia income tax treaty.

The discussion below assumes that the representations contained in the deposit agreements are true and that the obligations in the deposit agreements and any related agreements have been and will be complied with in accordance with the terms.

Table of Contents

Investors should consult their tax advisers as to the consequences under U.S. federal, estate, gift, state, local and applicable non-U.S. tax laws of the purchase, ownership and disposition of shares or ADSs.

Taxation of dividends on shares or ADSs

For U.S. federal income tax purposes, the gross amount of a distribution, including any Russian withholding taxes, with respect to shares or ADSs will be treated as a taxable dividend to the extent of our current and accumulated earnings and profits, computed in accordance with U.S. federal income tax principles. For taxable years beginning before January 1, 2013, certain dividends received by non-corporate U.S. Holders should be taxed at the lower applicable capital gains rate. This lower capital gains rate is only applicable to dividends paid by qualified foreign corporations (which term excludes PFICs, as defined below) and only with respect to shares or ADSs held for a minimum holding period (generally, 61 days during the 121-day period beginning 60 days before the ex-dividend date). A company will be a qualified foreign corporation if it is eligible for the benefits of an applicable United States income tax treaty. Non-corporate U.S. Holders are strongly urged to consult their tax advisers as to the applicability of the lower capital gains rate to dividends received with respect to shares or ADSs. Distributions in excess of our current and accumulated earnings and profits will be applied against and will reduce a U.S. Holder's tax basis in shares or ADSs and, to the extent in excess of such tax basis, will be treated as gain from a sale or exchange of such shares or ADSs. We do not intend to calculate our earnings and profits for U.S. federal income tax purposes and, unless we make such calculations, U.S. Holders should expect that any distributions with respect to shares or ADSs generally will be reported to them as a dividend, even if that distribution would otherwise be treated as a return of capital or as a capital gain pursuant to the rules described above. Such dividends will not be eligible for the dividends received deduction allowed to corporations.

If a dividend distribution is paid in rubles, the amount includible in income will be the U.S. dollar value of the dividend, calculated using the exchange rate in effect on the date the dividend is includible in income by the U.S. Holder, regardless of whether the payment is actually converted into U.S. dollars. Any gain or loss resulting from currency exchange rate fluctuations during the period from the date the dividend is includible in the income of the U.S. Holder to the date the rubles are converted into U.S. dollars will be treated as ordinary income or loss. U.S. Holders should be required to recognize foreign currency gain or loss on the receipt of a refund of Russian withholding tax pursuant to the United States-Russia income tax treaty to the extent the U.S. dollar value of the refund differs from the U.S. dollar equivalent of that amount on the date of receipt of the underlying dividend.

Russian withholding tax under the United States-Russia income tax treaty should be treated as a foreign income tax that, subject to generally applicable limitations and conditions, is eligible for a U.S. foreign tax credit against the U.S. federal income tax liability of the U.S. Holder or, at the election of the U.S. Holder, may be deducted in computing taxable income. If, however, the holder of an ADS is not treated as the owner of the underlying shares represented by the ADS for U.S. federal income tax purposes, then Russian withholding tax would not be treated as a foreign income tax eligible for a U.S. foreign tax credit as described in the preceding sentence. If Russian tax is withheld at a rate in excess of the applicable rate under the United States-Russia income tax treaty, a U.S. foreign tax credit for the excess amount may not be allowed to be claimed, even though the procedures for claiming refunds and the practical likelihood that refunds will be made available in a timely fashion are uncertain.

For U.S. foreign tax credit purposes, a dividend distribution will be treated as foreign source income and will generally be classified as passive category income but could, in the case of certain U.S. Holders, constitute general category income. The rules relating to the determination of the U.S. foreign tax credit, or deduction in lieu of the U.S. foreign tax credit, are complex and U.S. Holders should consult their tax advisers with respect to those rules.

Taxation on sale or other disposition of shares or ADSs

The sale or other disposition of shares or ADSs will generally result in the recognition of gain or loss in an amount equal to the difference between the amount realized on the sale or other disposition and the

Table of Contents

adjusted basis in such shares or ADSs. Such gain or loss generally will be treated as long-term capital gain or loss if the shares or ADSs have been held for more than one year. Capital gains of individuals derived from capital assets held for more than one year are currently eligible for reduced rates of taxation. The deductibility of capital losses is subject to significant limitations.

Deposits and withdrawals of shares by U.S. Holders in exchange for ADSs should not result in the realization of gain or loss for U.S. federal income tax purposes.

Gain or loss realized on the sale or other disposition of shares or ADSs will generally be treated as U.S. source income and therefore the use of U.S. foreign tax credits relating to any Russian taxes imposed upon such sale may be limited. U.S. Holders are strongly urged to consult their tax advisers as to the availability of tax credits for any Russian taxes withheld on the sale or other disposition of shares or ADSs.

If a U.S. Holder receives any foreign currency on the sale or other disposition of shares or ADSs, such U.S. Holder generally will realize an amount equal to the U.S. dollar value of such foreign currency on the settlement date of such sale or other disposition if (1) such U.S. Holder is a cash basis or electing accrual basis taxpayer and the shares or ADSs are treated as being traded on an established securities market or (2) such settlement date is also the date of such sale or other disposition. If the foreign currency so received is converted to U.S. dollars on the settlement date, such U.S. Holder should not recognize foreign currency gain or loss on such conversion. If the foreign currency so received is not converted into U.S. dollars on the settlement date, such U.S. Holder will have a basis in such foreign currency equal to its U.S. dollar value on the settlement date. Any gain or loss on a subsequent conversion or other disposition of such foreign currency generally will be treated as ordinary income or loss to such U.S. Holder and generally will be income or loss from sources within the United States for U.S. foreign tax credit purposes. Each U.S. Holder should consult its tax adviser regarding the U.S. federal income tax consequences of receiving foreign currency from the sale or other disposition of shares or ADSs.

Passive foreign investment company status

A non-U.S. company is a passive foreign investment company (**PFIC**) in any taxable year in which, after taking into account the income and assets of certain subsidiaries, either (1) at least 75% of its gross income is passive income or (2) at least 50% of the average value of its assets (based on an average of the quarterly values of the assets) is attributable to assets that produce or are held to produce passive income. We believe, and the foregoing discussion assumes, that for U.S. federal income tax purposes, we were not a PFIC for the taxable year ending in 2010, we will not be a PFIC for the current taxable year and we will not become a PFIC in the future. However, the PFIC determination is made annually and may involve facts that are not within our control. If we were a PFIC, materially adverse U.S. federal income tax consequences could result for U.S. Holders. Investors should consult their tax advisers as to the consequences of an investment in a PFIC.

Information reporting and backup withholding

U.S. Holders may be subject to the information reporting requirements of the Code, as well as to backup withholding on the payment of dividends on, and the proceeds received from the disposition of, shares or ADSs. Backup withholding may apply if a U.S. Holder: (1) fails to furnish its taxpayer identification number (**TIN**), which, in the case of an individual, is his or her social security number; (2) fails to provide certification of exempt status; (3) is notified by the IRS that he has failed properly to report payments of interest and dividends; (4) under certain circumstances, fails to certify, under penalties of perjury, that he has furnished a correct TIN or we have been notified by the IRS that such U.S. Holder is subject to backup withholding for failure to furnish a correct TIN; or (5) otherwise fails to comply with the applicable requirements of the backup withholding rules. U.S. Holders should consult their tax advisers regarding their qualification for exemption from backup withholding and the procedure for obtaining such

an exemption, if applicable.

Backup withholding is not an additional tax. Amounts withheld as backup withholding may be credited against a U.S. Holder's federal income tax liability, and a U.S. Holder may obtain a refund of any excess

Table of Contents

amounts withheld under the backup withholding rules by timely filing the appropriate claim for refund with the IRS and furnishing all required information.

Recently enacted legislation may require individual U.S. Holders to report to the IRS certain information with respect to their beneficial ownership of certain foreign financial assets, such as the shares or ADSs, if the aggregate value of such assets exceeds \$50,000. U.S. Holders who fail to report required information could be subject to substantial penalties. Prospective investors should consult their tax advisors concerning the application of the information reporting and backup withholding rules to their particular circumstances.

Documents on Display

The documents that are exhibits to or incorporated by reference in this document can be read at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549. Information on the operation of the Public Reference Room can be obtained by calling the SEC at +1-800-SEC-0330. These filings are also available at the website maintained by the SEC at <http://www.sec.gov>.

Some of our reports and other information can also be inspected at the offices of the NYSE at 20 Broad Street, New York, New York 10005.

Glossary

Blast furnace: A towering cylinder lined with heat-resistant (refractory) bricks, used by integrated steel mills to smelt iron from ore. Its name comes from the blast of hot air and gases forced up through the iron ore, coke and limestone that load the furnace.

Carbon steel: A type of steel generally having no specified minimum quantity of any alloying element and containing only an incidental amount of any element other than carbon, silicon, manganese, copper, sulfur and phosphorus.

CIF: Cost, Insurance and Freight, a commercial term pursuant to which the seller must pay the costs, insurance and freight necessary to bring the goods to the named port of destination but the risk of loss or damage to the goods, as well as any additional costs due to events occurring after the time of delivery, are transferred from the seller to the buyer.

Coils: Steel sheet that has been wound. A slab, once rolled in a hot-strip mill, can be more than one mile long; coils are the most efficient way to store and transport sheet steel.

Continuous casting: A method of pouring steel directly from a ladle through a tundish, shaped to form billets or slabs. Continuous casting avoids the need for blooming mills for rolling billets into slabs. Continuous cast metal solidifies in a few minutes, versus several hours for an ingot. As a result of this, the chemical composition and mechanical properties are more uniform.

FCA: Free Carrier, a commercial term pursuant to which the seller must deliver the goods, cleared for export, to the carrier nominated by the buyer at the named place. Costs for transportation and risk of loss transfer to the buyer after delivery to the carrier.

Flat-rolled steel/Flat products: Category of steel that includes sheet, strip and tin plate, among others.

FOB: Free on Board, a commercial term pursuant to which the buyer bears all costs and risks of loss of or damage to the goods from the point the goods pass the ship's rail at the named point of shipment.

Galvanized steel: Steel coated with a layer of zinc to provide corrosion resistance in underbody auto parts, garbage cans, storage tanks, fencing wire, etc. Sheet steel normally must be cold-rolled prior to galvanizing. Galvanized steel is subdivided into hot-dipped galvanized and electrogalvanized steel.

Hot rolled: Product that is sold in its as-produced state off the hot mill with no additional treatment, aside from being pickled and oiled (if specified).

Magnetic separator: A device used in a process when magnetically susceptible mineral is separated from gangue minerals by applying a strong magnetic field.

Table of Contents

Non-reserve mineral deposits: A mineral deposit that is a coal-, iron-, nickel-, chrome- or limestone-bearing body that has been sufficiently sampled and analyzed in trenches, outcrops, drilling and underground workings to assume continuity between sample points. However, this coal, iron, nickel, chrome or limestone deposit does not qualify as a commercially viable coal, iron, nickel, chrome or limestone reserve as prescribed by SEC standards until a final comprehensive evaluation based upon unit cost per tonne, recoverability and other material factors concludes legal and economic feasibility. In particular, our non-reserve mineral deposits meet the SEC's economic feasibility standard but do not qualify as mineral reserves because the deposits are either contained within the license boundary but are scheduled to be extracted beyond the license period or are adjacent but not contained within the license boundary. In both such cases, we intend to obtain the legal right to extract such deposits in the future. See Risk Factors Risks Relating to Our Business and Industry Our business could be adversely affected if we fail to obtain or renew necessary subsoil licenses and mining and other permits or fail to comply with the terms of our subsoil licenses and mining and other permits and Risk Factors Risks Relating to the Russian Federation Legal risks and uncertainties Weaknesses relating to the Russian legal system and legislation create an uncertain investment climate.

Pipes: A tube used to transport fluids or gases. Pipe and tube are often used interchangeably, with a given label applied primarily as a matter of historical use.

Probable reserves: Reserves for which quantity and grade and/or quality are computed from information similar to that used for proven reserves, but the sites for inspection, sampling and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation.

Proven reserves: Reserves for which (1) quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the results of detailed sampling and (2) the sites for inspection, sampling and measurement are spaced so closely and the geologic character is so well defined that size, shape, depth and mineral content of reserves are well-established.

Raw Steel: Steel in primary form of hot molten metal.

Rebar or Reinforcement bar: A commodity-grade steel used to strengthen concrete in highway and building construction.

Reserve: That part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination.

Rolled steel (products): Steel produced to a desired thickness by being passed through a set of rollers.

Scrap (Ferrous): Ferrous (iron-containing) material that generally is remelted and recast into new steel in electric arc furnaces. Integrated steel mills also use scrap for up to 25% of their basic oxygen furnace charge. Scrap includes waste steel generated from within the steel mill, through edge trimming and rejects, as well as excess steel trimmed by auto and appliance stampers, which is auctioned to scrap buyers as factory bundles.

Sections: Blooms or billets that are hot-rolled in a rolling mill to form, among other shapes, L , U , T or I shapes. Sections can also be produced by welding together pieces of flat products. Sections can be used for a wide variety of purposes in the construction, machinery and transport industries.

Semi-finished steel: Steel shapes (for example, blooms, billets or slabs) that later are rolled into finished products such as beams, bars or sheet.

Sheet steel: Thin, flat-rolled steel created in a hot-strip mill by rolling a cast slab flat while maintaining the side dimensions. The malleable steel lengthens to several thousand feet as it is squeezed by the rolling mill. The most common differences among steel bars, strip, plate and sheet are merely their physical dimensions of width and gauge (thickness).

Sintering: A process that combines iron-bearing particles into small chunks. Previously, these materials were too fine to withstand the air currents of the smelting process and were thrown away. The iron is now conserved because the chunks can be charged into the blast furnace.

Table of Contents

Slab: The most common type of semi-finished steel. Traditional slabs measure 18-25 centimeters thick, 75-225 centimeters wide and are usually about 6-12 meters long, while the output of the recently developed thin slab casters is approximately five centimeters thick. After casting, slabs are sent to the hot-strip mill to be rolled into coiled sheet and plate products.

Specialty steel: Alloyed steel produced by the addition of various metals (e.g., manganese) in small quantities during the steel-making process to improve mechanical properties such as strength and resistance to stress. Specialty steels are intermediary products between standard steel grades and stainless steel alloys (with a high content of nickel and chrome). Specialty steel products are typically used as long products (e.g., specialty bar quality, bearing steel, tool steel and high-speed steel).

Tailings: Material rejected from a mine after the valuable minerals have been recovered.

Welded mesh: Cold rolled or drawn wire cuts of certain length welded together at specified distances in longitudinal and traverse directions into sheets of rectangular shapes.

Wire rod: Round, semi-finished steel that is rolled from a billet and coiled for further processing. Wire rod is commonly drawn into wire products or used to tie bundles. Wire rod rolling mills (rolling facilities) can run as fast as 6,000 meters per minute.

Item 11. *Quantitative and Qualitative Disclosures About Market Risk*

In the normal course of business, our financial position is routinely subject to a variety of risks. We are exposed to market risks associated with foreign currency exchange rates, interest rates and commodity prices. We are also subject to the risks associated with the business environment in which we operate, including the collectability of accounts receivable.

We do not enter into hedging transactions to manage the risks specified above.

We do not hold or issue derivative financial instruments for trading purposes.

Currency Risk

The functional currencies for our Russian and Romanian subsidiaries are the ruble and lei, respectively. The U.S. dollar is the functional currency of our other international operations. Our reporting currency is the U.S. dollar.

In the past we entered into forward transactions to buy U.S. dollars for euros to hedge our exposure to movements in foreign currency exchange rates arising in relation to euro-denominated accounts receivable of our trading subsidiaries. These derivatives were not designated as hedging contracts for accounting purposes. As of December 31, 2010, we did not have any forward transactions.

Table of Contents

We are exposed to movements in the ruble and euro exchange rates relative to the U.S. dollar, our reporting currency. The following table sets forth our monetary assets and liabilities by currency as of December 31, 2010.

Balance as of December 31, 2010	U.S. Dollar	Ruble	Euro	Lei	Other	Total
	(In thousands of U.S. dollars)

Table of Contents

The table below summarizes our debt position by currency and rate method as of December 31, 2010.

	U.S. Dollar	Ruble	Euro	Ron	Total
	(In thousands of U.S. dollars)				
Fixed-rate debt	1,238,508	982,468	102,623		2,323,599
Variable-rate debt	2,115,925	2,558,984	304,318	15,603	4,994,830
Total debt	3,354,433	3,541,452	406,941	15,603	7,318,429

Interest Rate risk

Our interest rate exposure results mainly from debt obligations. As of December 31, 2010, we had \$2,323.6 million in fixed-rate borrowings and \$4,994.8 million in variable-rate borrowings.

We have not entered into transactions designed to hedge against interest rate risks, which may exist in connection with our current or future indebtedness. We monitor the market and assess our options for hedging interest rate risks and may enter into such arrangements in the future.

The table below presents the principal cash flows and related range of interest rates, by contractual maturity dates, of our fixed-rate debt obligations as of December 31, 2010.

	Currency	2011	Contractual Maturity Date as of December 31,				Total	Annual Interest Rate (Actual at December 31, 2010)
			2012	2013	2014	Thereafter

The carrying amounts of short-term loans approximate their fair values due to their short maturity. We believe that the carrying value of our long-term debt approximates its fair value.

Commodity Price Risk

In the normal course of our business, we are primarily exposed to market risk of price fluctuations related to the purchase, production and sale of steel products, and to a lesser extent, to the purchase, production and sale of coal, coke and other products.

We do not use commodity derivatives or long-term, fixed-price sales contracts to manage our commodity price risks.

Under certain of our ferroalloy products sales agreements, we grant a third-party reseller a sales price concession under which the selling price, which is typically prepaid by the reseller, is subject to adjustment based upon the level of market prices using the LME. Historically, these selling price adjustments occur within a one month period from the date the products are delivered to the reseller. As of December 31, 2010

Table of Contents

we had no stocks in the distribution channels. See Item 5. Operating and Financial Review and Prospects Critical Accounting Policies and Estimates Revenue recognition.

Equity Price Risk

We also have minor investments in shares of Russian companies that are not publicly traded and, accordingly, their market values are not available. We consider that it is not practicable for us to estimate the fair values of these investments because we have not yet obtained or developed the valuation models necessary to make the estimates, and the cost of obtaining an independent valuation is believed by management to be excessive considering the significance of the investments. Accordingly, these investments are omitted from the risk information disclosure presented herein.

We do not use derivative instruments or any other arrangements to manage our equity price risks.

Item 12. Description of Securities Other than Equity Securities**Depository Fees and Charges**

Our common American Depositary Shares, or common ADSs, each representing one common share, are traded on the New York Stock Exchange under the symbol MTL. The common ADSs are evidenced by common American Depositary Receipts, or common ADRs, issued by Deutsche Bank Trust Company Americas, as depository (**DBTCA**) under the Deposit Agreement, dated as of July 27, 2004, among Mechel OAO, Deutsche Bank Trust Company Americas, and holders and beneficial owners of common ADSs, as amended on May 21, 2007 and May 19, 2008. Common ADS holders are required to pay the following service fees to DBTCA:

Service	Fees (in U.S. dollars)
Issuance of common ADSs	Up to \$0.05 per common ADS
Cancellation of common ADSs	Up to \$0.05 per common ADS
Distribution of cash dividends or other cash distributions	Up to \$0.02 per common ADS
Distribution of common ADSs pursuant to (1) stock dividends, free stock distributions or (2) exercises of rights to purchase additional common ADSs or distribution of proceeds thereof	Up to \$0.05 per common ADS
Distribution of securities other than common ADSs or rights to purchase additional common ADSs or the distribution of proceeds thereof	Up to \$0.05 per common ADS
Common ADR transfer, combination or split-up fee	\$1.50 per transfer
Share register inspection annual fee	\$0.01 per common ADS
Operation and maintenance annual fee	\$0.02 per common ADS*

* This fee, when combined with the fees for cash distributions, shall not exceed \$0.02 per common ADS per year.

Our preferred American Depositary Shares, or preferred ADSs, each representing one-half of a preferred share, are traded on the New York Stock Exchange under the symbol MTL PR. The preferred ADSs are evidenced by preferred American Depositary Receipts, or preferred ADRs, issued by DBTCA under the Deposit Agreement, dated as of May 12, 2010, among Mechel OAO, Deutsche Bank Trust Company

Table of Contents

Americas, and holders and beneficial owners of preferred ADSs. Preferred ADS holders are required to pay the following service fees to DBTCA.

Service	Fees (in U.S. dollars)
Issuance of preferred ADSs	Up to \$0.05 per preferred ADS
Cancellation of preferred ADSs	Up to \$0.05 per preferred ADS
Distribution of cash dividends or other cash distributions	Up to \$0.02 per preferred ADS
Distribution of preferred ADSs pursuant to (1) stock dividends, free stock distributions or (2) exercises of rights to purchase additional preferred ADSs or distribution of proceeds thereof	Up to \$0.05 per preferred ADS
Distribution of securities other than preferred ADSs or rights to purchase additional preferred ADSs or the distribution of proceeds thereof	Up to \$0.05 per preferred ADS
Preferred ADR transfer, combination or split-up fee	\$1.50 per transfer
Share register inspection annual fee	\$0.01 per preferred ADS
Operation and maintenance annual fee	\$0.02 per preferred ADS*

* This fee, when combined with the fees for cash distributions, shall not exceed \$0.02 per preferred ADS per year.

In addition, holders of ADSs may also be charged for the following expenses: (1) taxes and governmental charges; (2) cable, telex and facsimile transmission and delivery charges; (3) transfer or registration fees of the Russian share registrar; (4) fees or charges of DBTCA for conversion of foreign currency into U.S. dollars; and (5) expenses of DBTCA in connection with the issuance of definitive certificates.

Holders of ADSs are responsible for any taxes or other governmental charges payable on their ADSs or on the deposited securities underlying the ADSs. DBTCA may refuse to transfer the ADSs or to allow holders to withdraw the deposited securities underlying their ADSs until such payment is made, or it may deduct the amount of taxes owed from any payments to ADS holders. It may also sell deposited securities, by public or private sale, to pay any taxes owed. ADS holders will remain liable if the proceeds of the sale are not enough to pay the taxes. If DBTCA sells deposited securities, it will, if appropriate, reduce the number of ADSs to reflect the sale and pay to ADS holders any proceeds, or send to ADS holders any property, remaining after it has paid the taxes.

Depository Payments for 2009 and 2010

In consideration for its appointment as depository, DBTCA agreed to reimburse us for costs of the maintenance of our ADR programs and of ADR-programs related investor relations activities. For the years ended December 31, 2009 and 2010, DBTCA has agreed to reimburse us \$1.242 million in regard to our common ADR program, and we expect this amount to be paid to us in 2011. DBTCA has also agreed to reimburse us \$2.494 million in regard to our preferred ADS program for the year ended December 31, 2010.

Table of Contents

In addition, for the years ended December 31, 2009 and 2010, DBTCA made the following payments on our behalf in relation to our ADR programs:

Category	Payment (in U.S. dollars) For the Year Ended December 31,	
	2009	2010
New York Stock Exchange listing fees	132,029	132,029
Proxy solicitation expenses	20,300	20,000
ADS holder identification expenses	10,000	15,000
Full Targeting Project		13,000
BD Corporate		5,000
Total	162,329	185,029

In addition, DBTCA waived the cost of various ADR programs-related support services that it provided to us in 2010. DBTCA had valued these services at \$237,500 per annum for common ADSs when DBTCA was re-appointed in 2008 and \$190,000 per annum for preferred ADSs when DBTCA was appointed in 2010. Under certain circumstances, including termination of the appointment of DBTCA prior to 2013, we would be required to repay to DBTCA some or all of the payments made to us or on our behalf (including fees waived by it) since its appointment.

PART II**Item 13. *Defaults, Dividend Arrearages and Delinquencies***

None.

Item 14. *Material Modifications to the Rights of Security Holders and Use of Proceeds*

None.

Item 15. *Controls and Procedures***(a) Disclosure Controls and Procedures**

As required by Rules 13a-15 and 15d-15 under the Securities Exchange Act of 1934, management has evaluated, with the participation of our chief executive officer and chief financial officer, the effectiveness of our disclosure controls and procedures as of the end of the period covered by this report. Disclosure controls and procedures refer to controls and other procedures designed to ensure that information required to be disclosed in the reports we file or submit under the Exchange Act is recorded, processed, summarized and reported, within the time periods specified in the rules and forms of the Securities and Exchange Commission. Disclosure controls and procedures include, without limitation, controls and other procedures designed to ensure that information required to be disclosed by us in our reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported to management, including our chief executive officer and chief financial officer, as appropriate to allow timely decisions regarding our required disclosure. In designing and evaluating our disclosure controls and procedures, management

recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives, and management was required to apply its judgment in evaluating and implementing possible controls and procedures.

As described below, four material weaknesses were identified in our internal control over financial reporting. Exchange Act Rule 12b-2 (17 CFR 240.12b-2) and Rule 1-02 of Regulation S-X (17 CFR 210.1-02) define a material weakness as a deficiency, or combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of the registrant's annual or

Table of Contents

interim financial statements will not be prevented or detected on a timely basis. As a result of the material weaknesses, our chief executive officer and chief financial officer have concluded that, as of December 31, 2010, the end of the period covered by this report, our disclosure controls and procedures were not effective at a reasonable assurance level.

(b) Management's Annual Report on Internal Control over Financial Reporting

Management is responsible for establishing and maintaining adequate internal control over financial reporting.

Internal control over financial reporting refers to a process designed by, or under the supervision of, our chief executive officer and chief financial officer and effected by our Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of our assets;

provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that our receipts and expenditures are being made only in accordance with authorizations of our management and members of our Board of Directors; and

provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of our assets that could have a material effect on our financial statements.

Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper override. Because of such limitations, there is a risk that material misstatements may not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process, and it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

Our management evaluated the effectiveness of our internal control over financial reporting as of December 31, 2010 using the framework set forth in the report of the Treadway Commission's Committee of Sponsoring Organizations (COSO), Internal Control - Integrated Framework.

As a result of management's evaluation of our internal control over financial reporting, management identified four material weaknesses in our internal control. These material weaknesses are described below:

We did not have an adequate system of internal controls over the preparation and review of the group's U.S. GAAP consolidated financial statements, U.S. GAAP transformation process, and group reporting packages received from subsidiaries;

We did not design and operate effective controls over the completeness of our commitments and contingencies disclosures;

We did not operate effective controls over the classification and reporting for transportation costs incurred by our subsidiaries;

We did not design and operate effective controls over the aggregation and analysis of transactions with certain related parties, including the analysis of revenue recognition criteria and the application of the variable interest model to certain of our related parties.

As a result of these material weaknesses, management has concluded that our internal control over financial reporting was ineffective as of December 31, 2010.

Table of Contents

Additional information regarding these Material Weaknesses follows:

(1) We did not have an adequate system of internal controls over the preparation and review of the group's U.S. GAAP consolidated financial statements, U.S. GAAP transformation process, and group reporting packages received from subsidiaries.

We failed to implement adequate system of internal controls over period-end financial reporting, as a result, numerous audit adjustments to the consolidated financial statements were identified resulting from errors in the underlying data or misapplication of accounting principles. The identified deficiencies that individually or when aggregated resulted, or could have resulted, in material errors to the financial statements have been identified as separate material weaknesses in this report. Any remaining adjustments or deficiencies were not material individually or in the aggregate, nevertheless, there is a reasonable possibility that due to these design and operating control deficiencies over the period end financial reporting and U.S. GAAP transformation processes, a material misstatement in our consolidated financial statements related to any of our significant accounts may not be prevented or detected on a timely basis. This material weakness affects all significant accounts related to our non-routine and estimation processes.

(2) We did not design and operate effective controls over the completeness of our commitments and contingencies disclosures.

We did not design and operate effective controls over completeness and correctness of the information management used to prepare our commitments and contingencies disclosure at a number of subsidiaries. As a result, material adjustments were made to our financial statement disclosures related to commitments and contingencies, including sales and purchase commitments and guarantees. Specifically, personnel executing the review of the data input by management of our subsidiaries are not performing sufficient detailed review of underlying data and not validating the source documentation. These deficiencies and resulting errors are not detected by our U.S. GAAP transformation review controls due to a material weakness in this process described above. This material weakness affects our commitments and contingencies disclosures.

(3) We did not operate effective controls over the classification and reporting for transportation costs incurred by our subsidiaries.

We did not operate effective controls over the classification and reporting of transportation costs incurred by our subsidiaries. As a result, material adjustments were made to our financial statements related to the classification of transportation expenses. Specifically, errors in transportation expense input data were not detected by review of the consolidation adjustments. Further lack of consistent application of the group's policy for reporting transportation expenses and ineffective performance of required reviews, including those required in the consolidation process, resulted in errors in cost of goods and selling and distribution expenses, prior to the recording of audit adjustments. This material weakness affects cost of sales, selling and distribution expenses and related financial statement disclosures.

(4) We did not design and operate effective controls over aggregation and analysis of transactions with certain related parties, including the analysis of revenue recognition criteria and the application of the variable interest model to certain of our related parties.

We did not design and operate effective controls over the aggregation and analysis of transactions with related parties, including the application of the variable interest model to certain of our related parties. As a result, material adjustments were made to the footnote disclosures related to operations with related parties. Specifically, we failed to develop and effectively operate controls designed to capture, validate and analyze all related party arrangements and

the impact of those relationships upon our U.S. GAAP financial reporting and disclosure. This material weakness affects related parties footnote disclosure.

Ernst & Young LLC, an independent registered public accounting firm, has audited our consolidated financial statements and has also issued an attestation report on the effectiveness of our internal controls over financial reporting as of December 31, 2010, which contains an adverse opinion on the effectiveness of internal controls over financial reporting.

Table of Contents

(c) Report of Independent Registered Public Accounting Firm

The Shareholders and the Board of Directors of Mechel OAO

We have audited Mechel OAO, an open joint-stock company, and subsidiaries (hereinafter referred to as the Group) internal control over financial reporting as of December 31, 2010, based on criteria established in Internal Control Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). The Group's management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Annual Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the company's annual or interim financial statements will not be prevented or detected on a timely basis. The following material weaknesses have been identified and described in Item 15 (b) Management's Annual Report on Internal Control Over Financial Reporting:
